

Frontier in Civil Engineering (2.0credits) (社会基盤工学のフロンティア)

| | |
|--------------------|---|
| Course Type | Core major courses/Basic Courses |
| Division at course | Master's Course |
| Class Format | Lecture |
| Course Name | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 Spring Semester |
| Lecturer | Associated Faculty |

Course Purpose

The aim of the lecture is to comprehensively examine the framework of civil engineering through the introductions of various research topics, projects and so on which the staff of civil engineering have investigated in recent years.

Prerequisite Subjects

None in particular

Course Topics

1. Guidance
2. Frontier of Structural Engineering
3. Frontier of Material Engineering
4. Frontier of Coastal Engineering
5. Frontier of River Engineering
6. Frontier of Geotechnical Engineering
7. Frontier of Urban and Transportation Planning

Textbook

None in particular

Additional Reading

None in particular

Grade Assessment

Report

Credits will be awarded to those students who score 60 or more.

Grades are as follows:

S:100-90, A:89-80, B:79-70, C:69-60, F:59-0.

Notes

Contacting Faculty

Students are encouraged to ask questions in the class.

Civil Engineering and Policies for Developing Countries (2.0credits) (途上国開発特論)

| | | |
|--------------------|-------------------------------------|--|
| Course Type | Core major courses/Basic Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | the latter term ,every other year | 2 Autumn Semester |
| Lecturer | Kiichiro HAYASHI Professor | |

Course Purpose

The objectives of this course is to study various issues including sustainable development, environmental management, international cooperation for better understanding the fundamental knowledge and applied skills on civil engineering in developing countries. Then comprehensive way of thinkgin will be studied.

Prerequisite Subjects

Course Topics

Concept of sustainable development; Environment and resource issues in developing countries; International environmental management I (Multilateral Environmental Agreements); International environmental management II (International organizations); International cooperation

Textbook

Handout will be distributed in the class.

Additional Reading

It will be assigned in the class if necessary.

Grade Assessment

Students will be evaluated on reaction papers and written reports. Higher than 60 points in 100 as full mark is passed.

Notes

Contacting Faculty

in the class and/or by e-mail.

| | | |
|--------------------|-------------------------------------|--|
| Course Type | Core major courses/Basic Courses | |

| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | the latter term ,every other year | 1 Autumn Semester |
| Lecturer | Associated Faculty | |

Course Purpose

The objectives of this course are (1) to study the fundamental knowledge on planning, design, construction and maintenance of infrastructure in Japan, as well as developing countries; (2) to survey various issues in civil engineering, including the environmental problems and recent development of regional disaster mitigation activities.

Prerequisite Subjects

None in particular

Course Topics

1. Introduction to disaster risk assessment
2. Water resources and river basin management
3. Coastal zone management
4. Infrastructure development under aid programs
5. Infrastructure projects in developing countries

Textbook

Students are encouraged to ask questions in the class.

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Basic Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Muhandiki Victor Designated Professor | |

Course Purpose

Develop ability to learn and think about environmental problems in English, and apply the ability for presenting and discussing one's ideas in English.

Prerequisite Subjects

Course Topics

English communication ability is a fundamental requirement for engineers and scientists working in the field of environmental problems, since environmental problems are not unique to any one country. In this course students will be assigned specific subjects concerning environmental problems and will be required to study the assigned subjects deeply, and then present and discuss the studied subjects in class in English.

Contents

1. Orientation
2. Group discussion (about environmental issues in home country)
3. Group presentation (about environmental issues in home country)
4. Group discussion (about movies on environmental issues)
5. Group presentation (movies on environmental issues)
6. Group discussion (about environmental issues to be debated)
7. Group debate
8. Open discussion (about any environmental topic to be decided by the class)
9. Presentation (a few students to volunteer to present on a topic of their interest)
10. Class discussion (what is sustainability?)
11. Individual presentation
12. Individual presentation
13. Individual presentation
14. Individual presentation
15. Individual presentation

Textbook

Additional Reading

Grade Assessment

Students will be evaluated by the style and contents of their presentations, contribution to discussions in class, and term report. Those with less than 80% attendance in the class will not be evaluated.

Notes

Instructor's Contact: Tel Ext. 6495 victor@urban.env.nagoya-u.ac.jp

| | | | |
|--------------------|-------------------------------------|--|------------------------------------|
| Course Type | Core major courses/Basic Courses | | |
| Division at course | Master's Course | | |
| Class Format | Lecture | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 1 the latter term | 1 Autumn Semester | |
| Lecturer | Hiroki tanikawa Professor | Takayuki MORIKAWA Professor | Keijiro Okuoka Assistant Professor |

Course Purpose

The objective of the course is to provide students with several definitions, views, interpretations, and analyses on the notion of sustainability.

Prerequisite Subjects

Low Carbon Society, Water and Waste Management Policies, etc.

Course Topics

The lectures are to be given by several lecturers that may include external guest speakers. Sustainability covers broad areas. It is therefore inevitable that the course consists of various topics. The course tries to clarify the topics from three viewpoints, namely: 1) Society and/or social sciences, 2) Observation and data by natural sciences, and 3) Urban and spatial perspective. One common element that should be noted here is "safety".

Contents

1. Orientation
2. What is "Sustainability" and "Sustainable Development"?
3. Sustainable Transport Systems
4. Global Change Monitoring by Remote Sensing
5. Safe Production and Consumption of Chemical Products
6. Creating Urban Green Infrastructure
7. Present Status of Scientific Understanding of Global Warming
8. Natural Disasters and the Society: A Case of the 2004 Tsunami and its Effects to Aceh, Indonesia
9. Kosa and Desertification
10. Sustainable Material Use and Low-carbonization Society
11. Open Discussion
12. Open Discussion
13. Open Discussion
14. Report Submission and Wrap-Up Discussion

Textbook

To be announced in class

Additional Reading

To be introduced in each lecture

Grade Assessment

Evaluation is carried out by reports (100%). Students have to attend all lectures as the schedule for the next class will be announced in the previous class. Those with less than 80% attendance in the class will not be evaluated.

| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 1 the previous term | 1 Autumn Semester | |
| Lecturer | Hikaru NAKAMURA Professor | Yoshihito Yamamoto Associate Professor | Taito Miura Assistant Professor |

Course Purpose

The purpose of these practices is to acquire basic and applied knowledge for understanding the properties of cement, cement paste and concrete and the mechanisms of cement hydration using text book written in English. Furthermore, the participants would be able to get into the total power such as gathering information, relevant technique investigation and presentation skills as going through the presentation.

Prerequisite Subjects

Material engineering, concrete structure No.1,2

Course Topics

1. Property of Cement

Type of cement

Crystal structure of cement

2. Property of Cement paste

Hydration process of each cement type

Micro-structure of cement hydrates

Textbook

Cement Chemistry 2nd edition H.F.W. Taylor, Thomas Telford

Additional Reading

No notification

Grade Assessment

Considering result of Presentation and Oral examination, the acceptance score must be more than 60 points. In this regards, the participant who is absent without notification is more than a half of class he/she isn't evaluation objective.

<graduate school: enrolled student since H23>

10090pts: S, 8980 pts: A, 7970 pts: B, 6960 pts: C, less than 59 pts: F

Notes

The participants should read the text book and references of cement chemistry and make a presentation about their own part.

| Lecturer | norimi mizutani Professor | Tomoaki NAKAMURA Associate Professor | YonghwanCHO Assistant Professor |

Course Purpose

The aim of this course is to review and discuss refereed journal papers in order to understand physical processes on coastal and ocean engineering.

Course objectives:

Students will be able to

1. explain what theoretical, experimental, and numerical methods used in coastal and ocean engineering are
2. understand state-of-the-art research in coastal and ocean engineering

Prerequisite Subjects

Course Topics

Presentation and discussion on a refereed journal paper on coastal and ocean engineering

Textbook

Students will select refereed journal papers closely related to their research topic

Additional Reading

Seminar on Geomaterial Engineering1C (2.0credits) (地盤材料工学セミナー1C)

| | | | |
|--------------------|--|--|---------------------------------------|
| Course Type | Core major courses/Core disciplinary courses | | |
| Division at course | Master's Course | | |
| Class Format | Seminar | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 2 the previous term | 2 Autumn Semester | |
| Lecturer | Masaki NAKANO Professor | Shotaro YAMADA Associate Professor | SAKAI Takayuki Assistant Professor |

Course Purpose

Understanding of latest knowledge and research tendency on geotechnical engineering and mechanics of geomaterials, students will be able to draw related issue and discuss the solution under related theory as well as to learn reading skill of paper and presentation skill, etc.

Prerequisite Subjects

Advanced Mechanics of Geomaterials, Advanced Soil Dynamics, Advanced Continuum Mechanics, Advanced Numerical Analysis

Course Topics

Reading the latest paper on geotechnical engineering and mechanics of geomaterials in turn.

Textbook

Paper

Additional Reading

none

Grade Assessment

Evaluation of presentation, Q&A and discussion in seminar, and 60% or more are accepted.

| Lecturer | KazuoTATEISHI Professor | Takeshi HANJI Associate Professor | Masaru Shimizu Assistant Professor |

Course Purpose

Seminar on design concept, maintenance and long-term management method for infrastructures.

Prerequisite Subjects

bridge engineering, structural engineering, steel structures, structural design

Course Topics

Reading and discussing some literatures on history, design and maintenance of infrastructures.

Textbook

Textbooks will be determined by the supervisors.

Additional Reading

Reference books will be determined by the supervisors.

Grade Assessment

Evaluation will be comprehensively based on attendance, presentation and discussion among students, etc.

Land Design Seminar 1A (2.0credits) (国土デザイン学セミナー 1 A)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | NAKAMURASHinichiro Lecturer | |

Course Purpose

This seminar aim to cultivate a capacity for understanding and expressiveness related to methodologies to create cultural, safe and secure regional and infrastructure design under the climate change and the aging society, in which technologies, institutions and policy measures are discussed within the scope of regional design, economy and public policy analysis.

Prerequisite Subjects

Urban and Regional Planning

Course Topics

Students review and collect the relevant advanced and recent literatures related to methodologies to create cultural, safe and secure region and infrastructure. The results are presented and discussed together with students and the supervisor.

Textbook

Additional Reading

Seminar on Conservation of Geoenvironment 1A (2.0credits) (地圏環境保全学セミナー1A)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | ArataKATAYAMA Professor | AWATATakanobu Assistant Professor |

Course Purpose

one of the following issues can be explained with comprehensive understanding:1.Mechanism of soil and groundwater pollution:2.Fate of pollutants in soil and groundwater:3.Bioremediation technologies and microorganisms:4.Other physical and chemical remediation technologies

Prerequisite Subjects

Human activities and the environment, Environmental geotechnology, sanitary engineering, Social environmental conservation, microbiology, chemistry, mathematics, Hydrology and etc.

Course Topics

Seminar on the fundamental phenomena in relation to the pollution of soil and ground water: mechanism and modelling of pollutant behavior, bioremediation technologies and microbial behavior, waste management and environmental risk assessment and etc.

Textbook

One of the following issues is presented by students with comprehensive understanding by reading more than five papers:1. Mechanism of soil and groundwater pollution:2. Fate of pollutants in soil and groundwater:3. Bioremediation technologies and microorganisms, 4. hazardous waste treatment, 5. others.

Additional Reading

Grade Assessment

Understanding level, presentation ability, participation to the discussion:Higher than 55 points in 100 as full mark is passed.

Notes

Global Environmental Cooperation Seminar1A (2.0credits) (国際環境協力セミナー 1 A)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | Kiichiro HAYASHI Professor | |

Course Purpose

The objective of the seminar is to study institutions, policies and assessment methods on sustainable development issues in global and local scales. The seminar will develop the basic and applied skills of students to collect and review relevant literatures and to present the results and findings from their own perspectives, in a comprehensive manner.

Prerequisite Subjects

Civil Engineering and Policies for Developing Countries I,II, Human activities and the environment, Urban Environmental Systems Engineering

Course Topics

Students are required to study institutions and policies and assessment methods on sustainable development issues from the perspective of environmental system engineering, environmental policy study and environmental economics. Students are required to collect articles and do study by themselves and present and discuss the results of findings with teachers. Also if there is a student who needs English communication, the seminar will be conducted in English.

Textbook

Additional Reading

Grade Assessment

Grading will be made taking into consideration understanding level, presentation ability, participation to the discussion, etc. Students are required to attend all classes. Higher than 60 points in 100 as full mark is passed.

Seminar on Environmental Ecology System1A (2.0credits) (環境エコロジーシステムセミナー1A)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | Toshiyuki YAMAMOTO Professor | Tomio MIWA Associate Professor |

Course Purpose

Learn travel behavior analysis, transportation planning, transport and environment dynamics, etc. in order to understand policies for environmental sustainability and related issues.

Prerequisite Subjects

History of City and Civilization, Probability and Statistics, Spatial Planning, Transportation Planning, Infrastructure Planning, Urban and National Land Planning

Course Topics

Discuss on methodological issues concerned with environmentally sustainable transport such as travel behavior analysis, transportation planning, transport environment dynamics, etc. with the aid of reading advanced English literature

Textbook

To be announced

Additional Reading

Grade Assessment

Presentation and active participation to the class (including questions and comments to presentations of other groups)

Learn travel behavior analysis, transportation planning, transport and environment dynamics, etc. in order to understand policies for environmental sustainability and related issues.

Prerequisite Subjects

History of City and Civilization, Probability and Statistics, Spatial Planning, Transportation Planning, Infrastructure Planning, Urban and National Land Planning

Course Topics

Discuss on methodological issues concerned with environmentally sustainable transport such as travel behavior analysis, transportation planning, transport environment dynamics, etc. with the aid of reading advanced English literature

Textbook

To be announced

Additional Reading

Grade Assessment

Presentation and active participation to the class (including questions and comments to presentations of other groups)

Advanced Course in Lifecycle Design of Civil Structures (2.0credits) (社会基盤施設のライフサイクル設計特論)

| | | | |
|--------------------|--|--|-------------------------------------|
| Course Type | Core major courses/Core disciplinary courses | | |
| Division at course | Master's Course | | |
| Class Format | Lecture | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 1 the latter term | 1 Autumn Semester | |
| Lecturer | KazuoTATEISHI Professor | Hikaru NAKAMURA Professor | Yasuo KITANE Associate Professor |

Course Purpose

It is the objective of this course to study design method and maintenance of bridge structures in the context of lifecycle management of civil structures. After completing this course, students will be able to:

List different types of structural design methods and explain their differences,

Explain typical design flow of bridge structures, and

Understand current conditions of existing bridges and describe maintenance systems of bridges in Japan.

Prerequisite Subjects

Course Topics

(1) To study fundamental theory of reliability-based structural design and to understand structural reliability and different design methods such as the allowable stress method and the limit state design method.

(2) To understand a typical flow of structural design which includes structural planning, selection of structural systems, verification of required performances, lifecycle cost analysis, and maintenance plan, by studying design examples of steel and concrete structures.

(3) To understand current conditions of existing bridges in Japan and to study efficient maintenance systems of bridge structures.

Advanced Fluvial and Coastal Hydrodynamics (2.0credits) (水圏力学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Tomoaki NAKAMURA Associate Professor | Ryouta TSUBAKI Associate Professor |

Course Purpose

The aim of this course is to understand physical processes in rivers and oceans. This class will provide advanced theories and technologies applied in the management of rivers and coasts.

Prerequisite Subjects

Fundamentals of Hydrodynamics, Open Channel Hydraulics, Coastal and Maritime Hydrodynamics, Hydrology and River Engineering, Coastal and Ocean Engineering, River and Coastal Environmental Engineering

Course Topics

1. Outline of the course
2. Governing equations for incompressible viscous fluid flow
3. Shallow water equations
4. Flow resistances in open-channel flow
5. Long wave theory
6. Shallow water wave theory
7. Wave-averaged conservation equations

Advanced Geotechnical Engineering (2.0credits) (地盤工学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | Toshihiro NODA Professor | Kentaro NAKAI Associate Professor |

Course Purpose

Firstly, overview and theoretical background of geotechnical engineering is reviewed.

Then, actual adopted examples to settlement (consolidation) and failure (bearing capacity) problems of the soft grounds are explained.

Moreover, dealing method to various uncertainty of the ground is provided such as safety factor method and reliability design method.

Prerequisite Subjects

Soil Mechanics, Soil and Foundation Engineering, Geotechnical Engineering, Continuum Mechanics, Advanced Work in Soil Mechanics and Geotechnical Engineering

Course Topics

- 1 Introduction to geotechnical engineering
- 2 Multi-dimensional consolidation analysis
- 3 Observational method for predicting consolidation settlement (Asaoka method)
- 4 Mean effective stress and bearing capacity
- 5 Undrained bearing capacity ($u=0$ circular slip surface analysis)

Advanced Infrastructure Planning (2.0credits) (社会基盤計画学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | Takayuki MORIKAWA Professor | Toshiyuki YAMAMOTO Professor |

Course Purpose

Understand the roles of infrastructure by learning its economic characteristics, planning procedure, financing and evaluation methods.

Prerequisite Subjects

Infrastructure Planning

Course Topics

1. Public economics 1 (social welfare and Pareto optimum)
2. Public economics 2 (consumer's behavior and demand curve)
3. Public economics 3 (producer's behavior and market equilibrium)
4. Public economics 4 (market failure)
5. Public economics 5 (externality)
6. Public economics 6 (public goods 1)
7. Public economics 7 (public goods 2)
8. Decision making in infrastructure planning
9. Evaluation and decision making 1 (cost-benefit analysis and value of non-market goods)
10. Evaluation and decision making 2 (evaluation methods of non-market goods and utility function)
11. Evaluation and decision making 3 (value of travel time saving and project evaluation)
12. Evaluation and decision making 4 (social welfare function and analytic hierarchy process)
13. Decision making under uncertainty 1 (expected utility theory)
14. Decision making under uncertainty 2 (Bayesian decision making and value of information)
15. Decision making under uncertainty 3 (game theory and dilemma problem)

Textbook

No textbooks are required. Materials are provided at classes.

Advanced Mechanics of Geomaterials (2.0credits) (地盤材料力学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Masaki NAKANO Professor | Shotaro YAMADA Associate Professor |

Course Purpose

Fundamental and advanced knowledge on Mechanics of Geomaterials is learned for construction and maintenance of many kinds of geotechnical structure under consideration of safety, environment and economy.

Prerequisite Subjects

Advanced Continuum Mechanics, Advanced Numerical Analysis

Course Topics

1. Consolidation/compression and shearing properties of remold clay
2. Consolidation/compression and shearing properties of natural deposited clay
3. Basic plasticity
4. Characteristics of conventional elasto-plastic constitutive model
5. Characteristics of unconventional/modern elasto-plastic constitutive model and description of mechanical behavior on natural deposited clay through this model
6. Characteristics of mechanical behavior on many kinds of geomaterial and description of the behavior through the new model
7. Design of geotechnical structure : two approaches by conventional design and by numerical analysis

Advanced Traffic Engineering and Management (2.0credits) (交通工学特論)

| | | | |
|--------------------|--|------------------------|------------------------|
| Course Type | Core major courses/Core disciplinary courses | | |
| Division at course | Master's Course | | |
| Class Format | Lecture | | |
| Course Name | Civil and Environmental Engineering | Automotive Engineering | Automotive Engineering |
| | Civil and Environmental Engineering Graduate | | |
| Starts 1 | 1 the previous term 1 Spring Semester | 1 Spring Semester | 1 Spring Semester |
| Lecturer | Hideki NAKAMURA Professor | | |

Course Purpose

There is no doubt that a considerable portion of pollution emissions is resulted from transportation related activities and vehicular movements in particular. Managing traffic safely and efficiently is one of the most effective solutions to relieve environmental issues worldwide. Training specialists who have the knowledge and skills of traffic engineering is highly demanded especially in developing countries where travel demand is rapidly increasing despite insufficient transportation infrastructure. In this course, fundamentals and internationally forefront issues in traffic engineering are to be covered in theory and practice, so that students can effectively master the most important issues for practicing in highway planning and traffic operations.

Prerequisite Subjects

Course Topics

1.INTRODUCTION TO TRAFFIC ENGINEERING AND ITS SCOPE 2.TRAFFIC SURVEYS
3.MACROSCOPIC TRAFFIC CHARACTERISTICS 4.MICROSCOPIC TRAFFIC CHARACTERISTICS
5.CAPACITY ANALYSIS AND BREAKDOWN PHENOMENA 6.HIGHWAY PLANNING AND
LEVEL OF SERVICE 7.INTERSECTIO

Conservation and Ecotoxicology of Soil and Water (2.0credits) (土水環境保全学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | ArataKATAYAMA Professor | |

Course Purpose

The class aims to understand the basics on the remediation of contaminated soil and water through the lecture on the outbreak of pollution, environmental standards, exposure to the organisms, toxicity and environmental fates of pollutants, effect on the ecosystem, remediation technologies of soil and water, and waste treatment technologies. A lecture-style class.

Prerequisite Subjects

Environmental geotechnology, microbiology, chemistry, sanitary engineering, toxicology, mathematics, soil science, hydrology

Course Topics

The lecture is carried out on the basics on the remediation of contaminated soil and water: pollutants and their properties, toxicity and the environmental standards, interaction (exposure and metabolism/degradation) of pollutants with organisms (mammals, plants, and microorganisms), environmental fate of pollutants, remediation technologies.

Textbook

Handouts in relation to the topics will be distributed.

| Starts 1 | 1 the previous term | 1 Spring Semester | |
| Lecturer | Hiroki tanikawa Professor Norisuke Visiting Associate Professor | Tsuyoshi FUJITA Visiting Professor | Minoru Fujii Visiting Associate Professor |

Course Purpose

To understand “environmental systems”, i.e., the interaction of human activities and nature.

To learn the scientific mechanisms of global environmental problems, such as climatic change.

To learn the basic principles and methods of analysing environmental systems, e.g., environmental economics, mathematical models, life-cycle assessment, etc.

To learn the principles and methods of environmental management at local, national and global scales.

Prerequisite Subjects

Low Carbon City Studies

Course Topics

1. About Environmental System Analysis
- 2-3. Carrying Capacity, Water, Energy, Material Flow and Stock
- 4-6. Simple Global Warming modeling
- 7-9. Industrial Symbiosis modeling
- 10-12. Basis on Input and Output Analysis
- 13-14. Urban Climate Modeling

Advanced Continuum Mechanics (2.0credits) (連続体力学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Masaki NAKANO Professor | |

Course Purpose

Introduction to continuum mechanics

Through the course, students will be able to:

1. understand and explain the basis of Vector and Tensor Analysis.
2. explain material and spatial descriptions of the physical value of body, material time derivative and expression of deformation of body using tensor.
3. understand and explain properties of Cauchy's stress tensor.
4. understand and explain basic law of mechanics and Cauchy's first/second law of motion

Prerequisite Subjects

Calculus, Linear algebra and Vector analysis

Course Topics

1. Definition of continuum mechanics
2. Basis of Vector and Tensor Analysis
3. Law of motion
4. Description of motion and deformation
5. Law of motion and stress tensor
6. basic equations of continuum mechanics
7. Compatibility condition of displacement rate and strain rate
8. Constitutive equation and Objectivity
9. Description of deformation of continuum at finite deformation theory

Water and Waste Management Policies (2.0credits) (水・廃棄物政策論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Muhandiki Victor Designated Professor | |

Course Purpose

Water pollution and solid waste are some of the major environmental problems facing our society today. For effective management of water and waste, it is essential to have relevant rules, laws and policies, and the institutions to administer them. This course will introduce legal, policy and institutional frameworks for managing water and waste.

Prerequisite Subjects

Water and Waste Engineering

Course Topics

1. The global water problem
2. Global initiatives to address the water problem
3. Point and non-point sources of water pollution
4. Water quality standards
5. Point and non-point source pollution control measures
6. Allocation of water and water rights
7. Dams and other flow regulation structures
8. Lakes: A typification of water resources management issues
9. Principles of lake management
10. Integrated lake basin management (ILBM)
11. Solid waste generation, collection and disposal
12. Solid waste minimization, recycling and resource recovery
13. Case study on solid waste management in Nagoya City
14. Open discussion
15. Open discussion

Advanced Coastal and Offshore Engineering (2.0credits) (海工学特論)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | norimi mizutani Professor | Tomoaki NAKAMURA Associate Professor |

Course Purpose

The aim of this course is to understand wave dynamics in a coastal zone, wave-wave and wave-structure interactions, and their numerical analysis methods.

Course objectives:

Students will be able to

1. understand and explain hydraulic phenomena related to the radiation stress
2. understand and explain diffraction problems
3. understand and explain wave dynamics including evanescent waves
4. understand and explain the dynamic behavior of floating bodies
5. understand and explain the basics of numerical wave tanks

Prerequisite Subjects

Advanced Fluvial and Coastal Hydrodynamics

Course Topics

1. Radiation stress and wave dynamics in a shallow water
2. Diffraction wave theory (vertical cylinder, axisymmetric structure)
3. Dynamic behavior of floating bodies
4. Potential and the boundary element method
5. Green function and numerical methods
6. Basics of numerical wave tanks

Course Purpose

Water pollution and solid waste are some of the major environmental problems facing our society today. In this class we will learn about various technologies and measures applied in drinking water supply, control of pollution of water bodies, and solid waste management.

Prerequisite Subjects

Water and Waste Management Policies

Course Topics

1. The hydrologic cycle
2. Water treatment and water supply systems
3. Operation and management of water supply systems
4. Discussion: Should water supply be privatized?
5. Domestic wastewater treatment systems
6. Cost of domestic wastewater treatment systems
7. Point and non-point sources of pollution
8. Estimation of point and non-point source pollution load
9. Point and non-point source pollution control measures
10. Design of solid waste handling facilities (I)
11. Design of solid waste handling facilities (II)

| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | Hiroki tanikawa Professor | Miho IRYOU Associate Professor |

Course Purpose

This course tries to realize unique style of learning. The course consists of: 1) lectures by environmental industries located in Chubu areas; 2) presentations and/or discussions among the students, 3) discussions between the students and the industry staffs. The industries are prominent companies mainly in the field of manufacturing. Note that the students are strongly recommended to take a course of "Theory of Environmental Resources Management".

Prerequisite Subjects

Low Carbon Cities Studies, Water and Wastes Management Policies, and Theory of Environmental Resources Management

Course Topics

(note: 2013-2014)

1. Introduction to the course
2. Lecture by Brother Industries, Ltd.
3. Lecture by Mitsubishi UFJ Research and Consulting Co.,Ltd.
4. Lecture by Katahira & Engineers Inc.
5. Lecture by JICA Chubu
6. Lecture by Toho Gas Co., Ltd.
7. Lecture by Seiko Epson Corporation
8. Lecture by Sumitomo Mitsui Banking Corporation
9. Lecture by Saraya Co., Ltd.
10. Lecture by Kasahara-mokuzai / Somneed
11. Lecture by City of Nagoya
12. Lecture by Denso Corporation
13. Group presentations and discussions

Lecture 2-12: Case of AY2013

Textbook

Materials will be distributed.

Additional Reading

Materials to be introduced.

Grade Assessment

Evaluation will be carried out by performance of presentations and/or contributions to discussions.

Transportation Systems Analysis? (2.0credits) (交通システム分析)

| | | | |
|--------------------|--|---------------------------------|-----------------------------------|
| Course Type | Core major courses/Core disciplinary courses | | |
| Division at course | Master's Course | | |
| Class Format | Lecture | | |
| Course Name | Civil and Environmental Engineering | Automotive Engineering | Automotive Engineering |
| | Civil and Environmental Engineering Graduate | | |
| Starts 1 | 1 the previous term 1 Spring Semester | 1 Spring Semester | 1 Spring Semester |
| Lecturer | Takayuki MORIKAWA Professor | Toshiyuki YAMAMOTO Professor | Tomio MIWA Associate Professor |

Course Purpose

To understand approaches and methods to analyze travel behavior and demands for various transportation systems

Prerequisite Subjects

Statistics, Transportation Planning

Course Topics

1. Transportation policies and transportation systems analysis
2. Travel demand and travel survey
3. Aggregate demand model 1 – Trip generation & production/attraction
4. Aggregate demand model 2 – Trip distribution
5. Aggregate demand model 3 – Modal split
6. Traffic assignment on network 1
7. Traffic assignment on network 2
8. Traffic assignment on network 3
9. Traffic simulation 1
10. Traffic simulation 2
11. Disaggregate demand model 1 – Binary choice
12. Disaggregate demand model 2 – Multinomial choice
13. Disaggregate demand model 3 – Estimation and statistical test
14. Disaggregate demand model 4 – Aggregation and forecast
15. Disaggregate demand model 5 – Multi-dimensional choice

Textbook

None

Additional Reading

- "Modeling Travel Behavior" by Kitamura, Morikawa, Sasaki, Fujii, & Yamamoto (in Japanese)
 "Discrete Choice Analysis" by Ben-Akiva and Lerman
 "Discrete Choice Methods with Simulation" by Train

Advanced Work in Hydro-morphologic Processes (1.0credits) (流れ・地形解析学演習)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Exercise | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Ryouta TSUBAKI Associate Professor | OBANAMakiko Assistant Professor |

Course Purpose

The aims of this course are

1. Understand the model to estimate transport of water and other materials,
2. Preview the result estimated by the model with reasonable boundary conditions, and
3. Understand the theory of aquatic biology.

Prerequisite Subjects

Hydraulics, Open-channel hydraulics, Hydrology, River Engineering, Mathematical ecology

Course Topics

1. Analysis of open channel flow and morphological change
2. Analysis of seepage flow in groundwater and unsaturated soil
3. Theory of mathematical modeling for aquatic organisms

Textbook

Printed document

Additional Reading

Advanced Work in Planning Methods (1.0credits) (社会基盤計画学演習)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Exercise | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Spring Semester |
| Lecturer | Tomio MIWA Associate Professor | |

Course Purpose

Learn systems analysis on city, transportation, and regional planning.

Objectives are to understand regression models, principal component analysis, discriminant analysis, and discrete choice models, to select an appropriate method for given data, to calculate correct results, and to interpret the results appropriately.

Prerequisite Subjects

Desirable to have some knowledge on basic microeconomic theory, probability theory and statistics, and mathematical planning method.

Course Topics

1. Statistical methods for data analysis
2. Regression analysis: basics
3. Regression analysis: application (specification, error term, generalized least squares)
4. Principal component analysis
5. Discriminant analysis
6. Discrete choice model: basics
7. Discrete choice model: application

Textbook

Lecture note will be provided.

Additional Reading

Maddala, G.S.: Introduction to Econometrics, Macmillan Publishing Company
Ben-Akiva, M. and Lerman, S.R.: Discrete Choice Analysis, MIT Press

Grade Assessment

Students will be evaluated by reports (100%) .

Students are required to submit all reports.

Credits will be awarded to those students who score 60 or more.

Grades are as follows: S:100-90, A:89-80, B:79-70, C:69-60, F:59-0.

Notes

Contacting Faculty

Students can ask questions at any time during classes.

Questions during off-class hours can be asked via e-mail: miwa@nagoya-u.jp

Advanced Work in Structural Mechanics (1.0credits) (構造力学特論演習)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Exercise | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | Yasuo KITANE Associate Professor | HIROHATA Mikihiro Associate Professor |

Course Purpose

To solve the various types of problems based on the contents of advanced structural mechanics.

Prerequisite Subjects

Introduction to structural mechanics Structural mechanics, Applied structural mechanics, Advanced structural mechanics

Course Topics

One-dimensional stress analysis Yield criteria Column buckling Plate buckling Lateral-torsional buckling

Textbook

None

Additional Reading

Several books will be introduced during the class.

Grade Assessment

Evaluation is based on reports, and the passing score is 60% and higher.

Notes

Questions are always welcome.

Advanced Work in Coastal and Offshore Engineering (1.0credits) (海工学演習)

| | | | |
|--------------------|--|--|---------------------------------|
| Course Type | Core major courses/Core disciplinary courses | | |
| Division at course | Master's Course | | |
| Class Format | Exercise | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 1 the latter term | 1 Autumn Semester | |
| Lecturer | norimi mizutani Professor | Tomoaki NAKAMURA Associate Professor | YonghwanCHO Assistant Professor |

Course Purpose

Through this course, students will be able to

1. find what issues are in coastal and ocean engineering
2. come up with how to address them
3. acquire enough skills to address them by themselves

Prerequisite Subjects

Advanced Fluvial and Coastal Hydrodynamics, Advanced Coastal and Offshore Engineering

Course Topics

Each group composed of two to three students will select and address an issue in coastal and ocean engineering. Every group will make a presentation on progress every week, and instructors and students will discuss the content of the presentation.

| Lecturer | Masaki NAKANO Professor | Toshihiro NODA Professor | Shotaro YAMADA Associate Professor |
| | Kentaro NAKAI Associate Professor | SAKAI Takayuki Assistant Professor | YOSHIKAWA Takahiro Assistant Professor |

Course Purpose

The fundamental problems in soil mechanics and geotechnical engineering are widely understood through the practical exercise and programming.

Prerequisite Subjects

Advanced Mechanics of Geomaterials, Advanced Soil Dynamics, Advanced Continuum Mechanics, Advanced Numerical Analysis

Course Topics

1 Understanding of the elasto-plastic constitutive equation of soils (Mechanical behavior of various soils)
2 Understanding of the dynamic problems of the ground
3 Understanding of the theory and analysis method for the ground deformation and failure

| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Autumn Semester |
| Lecturer | ArataKATAYAMA Professor | AWATATakanobu Assistant Professor |

Course Purpose

The class aims to understand the basic knowledge and techniques to carry out the research on the pollution of soil and groundwater, and waste treatment by the exercise.

Prerequisite Subjects

Environmental geotechnology, chemistry, microbiology and hydrology

Course Topics

Students are required to complete the exercise on the selected topics of physico-chemical analysis of soil and water in pollution, microbial manipulation, analysis of pollutants, and analysis of mass transport in soil and groundwater

Global Research Internship 1 (2.0credits) (グローバル研究インターンシップ1)

| | | |
|--------------------|--|--|
| Course Type | Core major courses/Core disciplinary courses | |
| Division at course | Master's Course | |
| Class Format | Exercise | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term and latter term | |
| Lecturer | Tomio MIWA Associate Professor | TASHIRO Mutsumi Designated Lecturer |

Course Purpose

As part of the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP), this course aims at providing students with research-based internship opportunities at universities, research institutions, companies, governmental and non-governmental organizations in Japan and overseas to acquire the ability to conduct practical and applied research.

Prerequisite Subjects

Students are expected to have taken some lectures offered by the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP).

Course Topics

Internship should be conducted based on close communication with academic advisor(s). Students are expected to acquire practical research know-how through On-site Research Training (ORT). Details of the Internship such as period and terms of implementation should be decided through thorough consultation with academic advisor(s) and experts at host institutions. Course Schedule: Step 1: Initial Proposal Step 2: Detailed Proposal Step 3: Internship Step 4: Final Report Step 5: Presentation

Textbook

none

Additional Reading

| Lecturer | ReikoFURUYA Associate Professor | | |

Course Purpose

This course is intended to help students learn the skills necessary for making an effective presentation in a language (either Japanese or English) different from their native tongue. Japanese students will make presentations in English, and international students in Japanese.

Prerequisite Subjects

Course Topics

(1) Observing video-taped presentations:By watching model presentations, students will see how an effective presentation is made and learn techniques useful for their own presentations. :(2) Making a presentation:By using presentation techniques discussed

| Lecturer | Part-time Faculty | | |

Course Purpose

Students will acquire basic skills to summarize their research as a paper in English and to make a presentation in English.

Prerequisite Subjects

Various subjects relating to English

Course Topics

This course focuses on guided practice in written and spoken English in academic and scientific contexts. Students are expected to write short essays, respond to questions from peers and improve their academic quality.

1. Basics of academic writing
2. Unity and coherence
3. Paragraph structures in scientific context
4. Audience-friendly presentation

Seminar on Materials and Structural Design 2A (2.0credits) (材料・形態学セミナー 2 A)

| | | | |
|--------------------|-------------------------------------|--|------------------------------------|
| Course Type | Core major courses | | |
| Division at course | Doctor's Course | | |
| Class Format | Seminar | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 1 the previous term | 1 Autumn Semester | |
| Lecturer | Hikaru NAKAMURA Professor | Yoshihito Yamamoto Associate Professor | Taito Miura Assistant Professor |

Course Purpose

The purpose of these practices is to acquire basic and applied knowledge for understanding the properties of cement, cement paste and concrete and the mechanisms of cement hydration using text book written in English. Furthermore, the participants would be able to get into the total power such as gathering information, relevant technique investigation and presentation skills as going through the presentation.

Prerequisite Subjects

Material engineering, concrete structure No.1,2

Course Topics

1. Property of Cement

Type of cement

Crystal structure of cement

2. Property of Cement paste

Hydration process of each cement type

Micro-structure of cement hydrates

Textbook

Cement Chemistry 2nd edition H.F.W. Taylor, Thomas Telford

Additional Reading

No notification

Grade Assessment

Considering result of Presentation and Oral examination, the acceptance score must be more than 60 points. In this regards, the participant who is absent without notification is more than a half of class he/she isn't evaluation objective.

<graduate school: enrolled student since H23>

10090pts: S, 8980 pts: A, 7970 pts: B, 6960 pts: C, less than 59 pts: F

Notes

The participants should read the text book and references of cement chemistry and make a presentation about their own part.

| Class Format | Seminar | | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate | |
| Starts 1 | 3 the previous term | 3 Autumn Semester | |
| Lecturer | Hikaru NAKAMURA Professor | Yoshihito Yamamoto Associate Professor | Taito Miura Assistant Professor |

Course Purpose

The purpose of these practices is to acquire basic and applied knowledge for understanding the properties of cement, cement paste and concrete and the mechanisms of cement hydration using text book written in English. Furthermore, the participants would be able to get into the total power such as gathering information, relevant technique investigation and presentation skills as going through the presentation.

Prerequisite Subjects

Material engineering, concrete structure No.1,2

Course Topics

1. Property of Cement

Type of cement

Crystal structure of cement

2. Property of Cement paste

Hydration process of each cement type

Micro-structure of cement hydrates

Textbook

Cement Chemistry 2nd edition H.F.W. Taylor, Thomas Telford

Additional Reading

No notification

Grade Assessment

Considering result of Presentation and Oral examination, the acceptance score must be more than 60 points. In this regards, the participant who is absent without notification is more than a half of class he/she isn't evaluation objective.

<graduate school: enrolled student since H23>

10090pts: S, 8980 pts: A, 7970 pts: B, 6960 pts: C, less than 59 pts: F

Notes

The participants should read the text book and references of cement chemistry and make a presentation about their own part.

| Starts 1 | 1 the previous term | 1 Autumn Semester | |
| Lecturer | norimi mizutani Professor | Tomoaki NAKAMURA Associate Professor | YonghwanCHO Assistant Professor |

Course Purpose

The aim of this course is to review and discuss refereed journal papers in order to understand physical processes on coastal and ocean engineering.

Course objectives:

Students will be able to

1. explain what theoretical, experimental, and numerical methods used in coastal and ocean engineering are
2. understand state-of-the-art research in coastal and ocean engineering

Prerequisite Subjects

Advanced Fluvial and Coastal Hydrodynamics, Advanced Coastal and Offshore Engineering, Advanced Work in Coastal and Offshore Engineering

Course Topics

Presentation and discussion on a refereed journal paper on coastal and ocean engineering

Textbook

Students will select refereed journal papers closely related to their research topic

Additional Reading

| Course Type | Core major courses | |
| Division at course | Doctor's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | NAKAMURASHinichiro Lecturer | |

Course Purpose

This seminar aim to cultivate a capacity for understanding and expressiveness related to methodologies to create cultural, safe and secure regional and infrastructure design under the climate change and the aging society, in which technologies, institutions and policy measures are discussed within the scope of regional design, economy and public policy analysis.

Prerequisite Subjects

Urban and Regional Planning

Course Topics

Students review and collect the relevant advanced and recent literatures related to methodologies to create cultural, safe and secure region and infrastructure. The results are presented and discussed together with students and the supervisor.

Seminar on Conservation of Geoenvironment 2A (2.0credits) (地圏環境保全学セミナー-2A)

| | | |
|--------------------|-------------------------------------|--|
| Course Type | Core major courses | |
| Division at course | Doctor's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | ArataKATAYAMA Professor | AWATATakanobu Assistant Professor |

Course Purpose

The aim of this class is to understand the fundamental phenomena in relation to the pollution of soil and ground water: mechanism and modeling of pollutant behavior, bioremediation technologies and microbial behavior, waste management and environmental risk assessment and etc. Students are required to explain one of the above issues with comprehensive understanding after finding the important points by themselves.

Prerequisite Subjects

Human activities and the environment, Environmental geotechnology, sanitary engineering, Social environmental conservation, microbiology, chemistry, mathematics, Hydrology, Seminar on Conservation of Geoenvironment 1A,1B, 1C & 1D and etc.

Course Topics

Students in this class are required to present the topics in relation to the researches on pollution of soil and ground water, mechanism and modeling of pollutant behavior, bioremediation technologies and microbial behavior, waste management and environmental impact assessment. The topics presentation should be prepared by reading more than 10 journal papers, and show the frontier of the research in the topic.

Textbook

Additional Reading

Grade Assessment

Understanding level, presentation ability, participation to the discussion:Higher than 60 points in 100 as full mark is passed.

| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the latter term | 1 Spring Semester |
| Lecturer | ArataKATAYAMA Professor | AWATATakanobu Assistant Professor |

Course Purpose

The aim of this class is to understand the fundamental phenomena in relation to the pollution of soil and ground water: mechanism and modeling of pollutant behavior, bioremediation technologies and microbial behavior, waste management and environmental risk assessment and etc. Students in this class are required to compare different research approaches and to explain them critically concerning on the issues selected by themselves.

Prerequisite Subjects

Human activities and the environment, Environmental geotechnology, sanitary engineering, Social environmental conservation, microbiology, chemistry, mathematics, Hydrology, Seminar on Conservation of Geoenvironment 1A,1B, 1C &&&&& 1D and etc.

Course Topics

Students in this class are required to present the topics in relation to the researches on pollution of soil and ground water, mechanism and modeling of pollutant behavior, bioremediation technologies and microbial behavior, waste management and environmental impact assessment. The topics presentation should be prepared by reading more than 10 journal papers, and show the frontier of the research in the topic.

Global Environmental Cooperation Seminar2A (2.0credits) (国際環境協力セミナー 2 A)

| | | |
|--------------------|-------------------------------------|--|
| Course Type | Core major courses | |
| Division at course | Doctor's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | Kiichiro HAYASHI Professor | |

Course Purpose

The objective of the seminar is to study institutions, policies and assessment methods on sustainable development issues in global and local scales. The seminar will develop the basic and applied skills of students to collect and review relevant literatures and to present the results and findings from their own perspectives, in a comprehensive manner.

Prerequisite Subjects

Civil Engineering and Policies for Developing Countries I, II, Human activities and the environment, Urban Environmental Systems Engineering, Global Environmental Cooperation Seminar1A,1B,1C,1D

Course Topics

Students are required to study institutions and policies and assessment methods on sustainable development issues from the perspective of environmental system engineering, environmental policy study and environmental economics. Students are required to collect articles and do study by themselves and present and discuss the results of findings with teachers. Also if there is a student who needs English communication, the seminar will be conducted in English.

Textbook

Additional Reading

Grade Assessment

Grading will be made taking into consideration understanding level, presentation ability, participation to the discussion, etc. Students are required to attend all classes. Higher than 60 points in 100 as full mark is passed.

| Course Type | Core major courses | |
| Division at course | Doctor's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | Toshiyuki YAMAMOTO Professor | Tomio MIWA Associate Professor |

Course Purpose

Learn travel behavior analysis, transportation planning, transport and environment dynamics, etc. in order to understand policies for environmental sustainability and related issues.

Prerequisite Subjects

History of City and Civilization, Probability and Statistics, Spatial Planning, Transportation Planning, Infrastructure Planning, Urban and National Land Planning

Course Topics

Discuss on methodological issues concerned with environmentally sustainable transport such as travel behavior analysis, transportation planning, transport environment dynamics, etc. with the aid of reading advanced English literature

Textbook

To be announced

Global Environmental Leaders Seminar 2A (2.0credits) (国際環境人材育成セミナー 2 A)

| | | |
|--------------------|-------------------------------------|--|
| Course Type | Core major courses | |
| Division at course | Doctor's Course | |
| Class Format | Seminar | |
| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term | 1 Autumn Semester |
| Lecturer | Tomio MIWA Associate Professor | TASHIRO Mutsumi Designated Lecturer |

Course Purpose

As part of the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP), this seminar aims at providing students with opportunities to acquire the ability to conduct and manage several activities in the international specialized programs for civil and environmental engineering.

Prerequisite Subjects

Students are expected to have taken some lectures offered by the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP).

Course Topics

Every week, one or two students will be required to explain their own research activities; problem awareness, methodology and progress. After that, all participants will have a discussion. Through this process, the ability to explain and persuade and the ability to think from a variety of angles will be enhanced.

Textbook

| Course Name | Civil and Environmental Engineering | Civil and Environmental Engineering Graduate |
| Starts 1 | 1 the previous term and latter term | |
| Lecturer | Tomio MIWA Associate Professor | TASHIRO Mutsumi Designated Lecturer |

Course Purpose

As part of the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP), this course aims at providing students with research-based internship opportunities at universities, research institutions, companies, governmental and non-governmental organizations in Japan and overseas to acquire the ability to conduct practical and applied research.

Prerequisite Subjects

Students are expected to have taken some lectures offered by the Forefront Studies Program and the Nagoya University Global Environmental Leaders Program (NUGELP).

Course Topics

Internship should be conducted based on close communication with academic advisor(s). Students are expected to acquire practical research know-how through On-site Research Training (ORT). Details of the Internship such as period and terms of implementation should be decided through thorough consultation with academic advisor(s) and experts at host institutions. Course Schedule: Step 1: Initial Proposal Step 2: Detailed Proposal Step 3: Internship Step 4: Final Report Step 5: Presentation

Textbook

none

Additional Reading

none

Grade Assessment

Performance is graded by Pass or Fail (2 credits). Grading shall be based on student's report and presentation.
