

Mathematics Tutorial Ia (1.0credits) (数学演習 1 a)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester		
Elective/Compulsory	Elective	Elective	Elective
	Elective		
Lecturer	RICHARD Serge Charles Designated Professor		

Course Purpose

The aim of this course is to deepen the understanding of calculus and to cultivate the ability to apply mathematical knowledge. The course is mainly intended for students taking Calculus I.

Prerequisite Subjects

Calculus I

Course Topics

Exercises sheets will be provided each week before the tutorial, and will be available on the web site of the course. Homework will be due every week during the tutorial. For more information: <http://www.math.nagoya-u.ac.jp/richard/fall2018.html>

Textbook

order it during a class as needed

Additional Reading

do not appoint the textbook, but distribute a lecture document by a class of every time

Grade Assessment

Your final grade will be determined by homework (50%) and quizzes (50%).

Notes

Mathematics Tutorial Ib (1.0credits) (数学演習 1 b)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
Starts 1	Automotive Engineering 1 Autumn Semester 1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	Erik Darpö Designated Associate Professor		

Course Purpose

The aim of this course is to provide essential mathematical knowledge necessary to further study mathematics and other sciences at university level. The course is intended for students taking Linear algebra I.

Prerequisite Subjects

The course is intended for students taking Linear algebra I.

Course Topics

1. Geometric setting : points and vectors in \mathbb{R}^n , located vectors in \mathbb{R}^n , scalar product in \mathbb{R}^n , norm and scalar product in \mathbb{R}^n , parametric representation of a line, planes and hyperplanes. 2. Matrices and linear equations: matrices, homogeneous linear equations, row operations and Gauss elimination, elementary matrices. 3. Vector spaces: abstract definition, linear combinations, convex sets, linear independence, dimension, the rank of a matrix. 4. Linear maps: general maps, linear maps, kernel and range of linear maps, rank and linear maps, matrix associated with a linear map, composition of linear maps, inverse of a linear map. It is desirable to read a textbook or reference materials before a class

Textbook

I do not appoint the textbook

Additional Reading

Otto Bretscher: Linear Algebra with Applications, fourth edition, Pearson 2009. ISBN: 978-0-13-600926-9

Grade Assessment

The assessment of this course coincides with the assessment of the course Linear Algebra II. Any student who does not participate in the final exam will receive the grade "Absent".

Notes

do not need the study condition

Contacting Faculty

Phone: 052-789-5612 Office: A-331, Science building A.

Fundamental Physics Tutorial Ia (1.0credits) (物理学基礎演習 1 a)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Autumn Semester 1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	SHIGEMORI Masaki Designated Professor		

Course Purpose

This is the companion course to the lecture course Fundamentals of Physics I on introductory calculus-based mechanics. It offers exercises to cultivate the ability to analyze and solve problems, as well as presentation and discussion skills so as to participate effectively in discussions among peers and instructors, leading to mastering the concepts introduced in the lecture course. Therefore students taking the lecture course are expected to register for this tutorial course.

Prerequisite Subjects

Fundamentals of Physics I; Calculus I

Course Topics

See syllabus for Fundamentals of Physics I

Textbook

Students are required to purchase the online Fundamentals of Physics Extended 10th Edition International Student Version with WileyPLUS Set (John Wiley & Sons, 2010 ISBN:9780470576083) [However, do not purchase it before the first class meeting where further details will be announced in class]

Additional Reading

order it during a class as needed

Grade Assessment

Grading Attendance and Class participation: 40% Assignments and Quizzes: 60% Class attendance is required. Absentee must give a valid reason, supported with document. A student will receive an "Absent" grade if he is absent 2 or more times without valid reason.

Notes

There are no prerequisites

Contacting Faculty

By appointment. Please email instructors to make an appointment.

Fundamental Physics Tutorial I b (1.0credits) (物理学基礎演習 1 b)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Autumn Semester 1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	TAMA Florence Muriel Professor		

Course Purpose

This is a companion course to Fundamental Physics II, and offers practical exercises for mastering the concepts introduced in the lecture courses. Students taking the lecture courses should also take this tutorial class

Prerequisite Subjects

Related Courses Calculus I; Fundamentals of Physics I ; Fundamentals of Physics II

Course Topics

Course Contents See syllabus for Fundamental Physics II.

Textbook

Fundamentals of Physics Extended 10th Edition International Student Version with WileyPLUS Set (John Wiley & Sons, 2010 ISBN: 9781118230749)

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Grading Weekly assignments; attendance; class participation. (Weighting to be advised.) Criteria for “Absent” & “Fail” Grades • Class attendance is required. Absentees must give a valid reason (e.g. doctor’s certificate). A student who is absent from more than 3 sessions will receive zero for the semester attendance mark. • The “Absent” grade is reserved for students who withdraw by November 16. After that day, a letter grade will be awarded based on marks earned from all assessment during the semester.

Mathematics Tutorial II a (1.0credits) (数学演習 2 a)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Spring Semester 1 Spring Semester	1 Spring Semester	1 Spring Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	RICHARD Serge Charles Designated Professor		

Course Purpose

The aim of this course is to deepen the understanding of calculus and to cultivate the ability to apply mathematical knowledge. The course is mainly intended for students taking Calculus II.

Prerequisite Subjects

Calculus II, G30 program

Course Topics

Exercises sheets will be provided each week before the tutorial, and will be available on the web site of the course. Homework will be due every week during the tutorial.

Textbook

No textbook is required for this tutorial.

Additional Reading

No reference book is required for this tutorial.

Grade Assessment

Your final grade will be determined by homework (40%) and quizzes (60%).

Mathematics Tutorial II b (1.0credits) (数学演習 2 b)

Course Type	Basic Specialized Courses		
Class Format	Exercise		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Spring Semester 1 Spring Semester	1 Spring Semester	1 Spring Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	Erik Darpo Designated Associate Professor		

Course Purpose

The objective of this course is to provide essential mathematical knowledge necessary to further studies in mathematics and science at university level. The course is primarily intended for students taking the course Linear algebra II.

Prerequisite Subjects

Linear Algebra II

Course Topics

Orthogonal maps, vector spaces, determinants and their applications, eigenvalues and eigenvectors, applications of eigenvalue theory, linear differential equations.

Textbook

do not appoint the textbook

Additional Reading

Otto Bretscher: Linear Algebra with Applications, fourth edition, Pearson

Grade Assessment

Explained during the first class

Notes

While not a formal requirement, Linear Algebra I is strongly recommended.

Analytical Chemistry (2.0credits) (分析化学)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

The course will introduce the fundamentals of analytical chemistry and mainly focuses on classical but still widely used wet chemical methods, combined with an overview of the instrumental techniques used in contemporary chemical analysis.

Prerequisite Subjects

Fundamentals in Chemistry I, II. Laboratory in Chemistry

Course Topics

Analytical Chemistry will cover the following topics: Acid - base equilibria, Precipitation/gravimetry, Redox equilibria, Titration, Spectrochemical methods, Chromatography. It is desirable to read a textbook or reference materials before a class.

Textbook

Gary D. Christian; "ANALYTICAL CHEMISTRY, 7TH EDITION"; 2013; Publication Hoboken, N.J.: John Wiley & Sons

Additional Reading

order it during a class as needed

Grade Assessment

Intermediate exam: 30%, final exam: 70% TOTAL 100% = 100 pts.

Notes

Fundamentals in Chemistry I, II. Laboratory in Chemistry is mandatory!

Contacting Faculty

Either after the classes or during the office hours/by email (to be announced) E-mail: gsamjeske@chem.nagoya-u.ac.jp

Organic Chemistry I (2.0credits) (有機化学1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Jiyoung SHIN Designated Professor

Course Purpose

The main purpose of this course is to acquire a logical framework for understanding fundamental organic chemistry. This framework emphasizes how the structures of organic molecules, as well as the electron density configurations, are related to patterns of chemical reactions. On the basis of the knowledge educated following the course contents, the students will be able to solve progressive problems sequentially.

Prerequisite Subjects

Fundamentals of Chemistry I and II

Course Topics

Class 1. Structure Prospective of Organic Molecules --- Atomic Electron Configuration and Construction of Organic Molecules (Hybridization) Class 2. Projection of Molecular Structures of Organic Molecules and Classification of the Isomers --- Constitutional (Chain, Position, and Functional Group) Isomers and Stereoisomers (Diastereomers and Enantiomers) Class 3. Optical Activities of Stereoisomers and Assignment of Stereoisomeric Structures --- Fischer and Newman Projections; Absolute (R/S) and Optically Observed (D/L) Rotations; Specific Rotation and Enantiomeric Purity; Meso Compound Class 4. Electron Density Configuration of Organic Molecules and Their Acidity/Basicity --- Formal Charges and Oxidation States; Acidity/Basicity and Electrophilicity/Nucleophilicity; Type of Chemical Reactions Class 5. Potential Energy Profiles for Kinetically and Thermodynamically Favorable Reactions --- Stability of Carbocations, Carbanions, and Hydrocarbon Radicals and the Stabilization Factors (Hyperconjugation and Resonance) Class 6. Assessment of the Classes 1-5 with Practice Problems Class 7. General Trends of Aliphatic Nucleophilic Substitutions and Bimolecular Reactions (SN2) --- Efficient Substrates and Proper Leaving Groups; Reactivity of Nucleophiles and Solvent Effect; Stereochemistry; Competing Reactions Class 8. Unimolecular Aliphatic Nucleophilic Substitutions (SN1) --- Efficient Substrates and Proper Leaving Groups; Nucleophilicity and Solvolysis; Stability of Carbocation Intermediate; Stereochemistry; Competing Reactions Class 9. Aliphatic Eliminations --- Unimolecular (E1 and E1CB) and Bimolecular (E2) Elimination; Thermodynamically and Kinetically favored (Zaitsev and Hofmann) Eliminations Class 10. Types of Nucleophiles and Haloalkanes and Their Reaction Trends/Overview (Substitutions & Eliminations) Class 11. Assessment of the Classes 7-10 with Practice Problems Class 12. Nomenclature of Organic Compounds --- Saturated/Unsaturated Hydrocarbons; Functional Groups; Aromatic Hydrocarbons; Stereochemical Assignments; Fused Rings (Spiroalkanes and Bicyclo/Tricycloalkanes) Class 13. Structures and Stereochemistry of Cycloalkanes and their Stability and Reactivity Class 14. Preparation of Haloalkanes (Radical Reactions) --- Potential Energy Profiles of Reaction Coordinates Class 15. Assessment of Overall Classes with Practice Problems (1-14)

Textbook

Organic Chemistry: Structure and Function (Seventh Edition), Peter C. Vollhardt and Neil E. Schore, (W. H. Freeman and Company), New York, 2014, Chapters 1-7.

Additional Reading

Organic Chemistry (second edition), Jonathan Clayden, Nick Greeves, and Stuart Warren (Oxford University Press), 2012 ISBN-10:0199270295.

Grade Assessment

Examination [total 70%: two midterms(20% for each) and one final (30%)], Attendance (10%), and Assignment of Homework (20%): S(x90), A(90>x80), B(80>x70), C(70>x60), and F(60>x)

Notes

In the cases of any unavoidable reasons such as sickness, accident, or no attendance school, the student may get a grade of 'Absent' through the judgment of the course instructor and the student, when the student submits a 'Course Withdrawal Request Form' to receive the 'Absent' grade. No submission of sickness/absence reports and lack of attendance score will result in 'F' grade: It is for the protection of other attendances in the corresponding course from the frequent absences of the specific/uncertain student(s).

Contacting Faculty

Students can communicate with the course instructor face-to-face either in the class or through the appointment. Communication through email (instructor's e-mail: jyshin@chembio.nagoya-u.ac.jp) is also available.

Physical Chemistry I (2.0credits) (物理化学1)

Course Type	Basic Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	2 Autumn Semester	2 Autumn Semester
Elective/Compulsory	Compulsory	Elective
Lecturer	Peter BUTKO Designated Professor	

Course Purpose

The purpose of this course is to learn what physical chemistry is all about and to grasp important principles and facts about physical chemistry. The course begins with perfect gas law, proceeds to thermodynamics, and finishes with applications of thermodynamics to simple mixtures.

Prerequisite Subjects

Fundamentals of Chemistry I and II

Course Topics

- 1 The Properties of Gases 1 (Ch. 1)
- 2 The Properties of Gases 2 (Ch. 1)
- 3 The First Law 1 (Ch. 2)
- 4 The First Law 2 (Ch. 2)
- 5 Pre-exam Review & EXAM 1 (Chs. 1 & 2)
- 6 The Second and Third Laws 1 (Ch. 3)
- 7 The Second and Third Laws 2 (Ch. 3)
- 8 Physical Transformations of Pure Substances (Ch. 4)
- 9 Simple Mixtures 1 (Ch. 5)
- 10 Simple Mixtures 2 (Ch. 5)
- 11 Pre-exam Review & EXAM 2 (Chs. 3 5)
- 12 Chemical Equilibrium 1 (Ch. 6)
- 13 Chemical Equilibrium 2 (Ch. 6)
- 14 Pre-final Review
- 15 FINAL EXAM (Ch. 1 6)

It is desirable to read a textbook or reference materials before a class

Textbook

P. Atkins and J. de Paula: Atkins' Physical Chemistry, 11th Ed., Oxford University Press, 2018

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Two exams: 100 points each, final exam (comprehensive): 200, homework: 50. TOTAL: 450.

The "Absent" grade is reserved for students that withdraw by the 6th lecture period. After that day, a letter grade

will be awarded based on grades earned from all assignments during the semester.

Biochemistry I (2.0credits) (生化学 1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Elective
Lecturer	YOU Young-Jai Designated Professor

Course Purpose

The purpose of this course is to introduce the biomolecules and their contributions to life.

Prerequisite Subjects

Biochemistry II, III, and IV (Terms IV, V, and VI, respectively)

Course Topics

1. Introduction: What does chemistry do with biology? 2. Thermodynamics 3. Water: Physical & chemical properties of water. 4. Amino Acids 5. Proteins: 2D structures 6. Proteins: 3D structures 7. Proteins in action: Hemoglobin 8. Tools to study protein functions 9. Proteins in action: enzymes 10. DNA, RNA and genome 11. Tools to study genomes
It is desirable to read a textbook or reference materials before a class

Textbook

1. Principles of Biochemistry by Voet, D., Voet, J.G. and Pratt, C.W., Wiley and son, Inc. USA. ISBN: 78-11809244-6, 4th edition
2. Biochemistry by Berg, Tymoczko, Stryer, 8th edition
3. Lehninger Principles of Biochemistry by Nelson and Cox, 7th edition.

Additional Reading

Recommended reading will be suggested in the class.

Grade Assessment

Evaluation will be based on in-class participation, assignments and examinations. Absent based on submission of Course Withdrawal Request Form. Fail based on "Failed" results of examinations and assignments.

Notes

There are no prerequisites

Contacting Faculty

Cell Biology I (2.0credits) (細胞学 1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Maria VASSILEVA Designated Associate Professor

Course Purpose

This course is expected to deepen students' knowledge in basic cell organization, and is the beginning of series of courses on Cell Biology. Cell Biology I course provides students with an overview of cell structure, proteins structure and function, and fundamental genetic processes in the cell.

Prerequisite Subjects

Fundamentals of Biology I

Course Topics

The course introduces basic cell organization, the structure and role of proteins in cells, and then focuses on overview of genetic processes in the cell. 1. Basic cell organization; 2. Protein structure and function; 3. Structure of DNA and chromosomes; 4. DNA replication, repair and recombination; 5. From DNA to protein; 6. Control of gene expression; 7. How genes and genomes evolve; 8. Analyzing genes and genomes. It is desirable to read a textbook or reference materials before a class.

Textbook

Essential Cell Biology, B. Alberts et al., Garland Science.

Additional Reading

Becker's world of the cell, Hardin, Bertoni, Kleinsmith, Pearson. Molecular Biology of the Cell, B. Alberts et al., Taylor & Francis.

Grade Assessment

Evaluation is based on in-class participation, assignments and examinations. Absent based on submission of Course Withdrawal Request Form. Fail - a total accumulated score of less than 60%.

Notes

Strongly recommended to have completed Fundamentals of Biology I

Contacting Faculty

Analytical Mechanics I (2.0credits) (解析力学 1)

Course Type	Basic Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	2 Autumn Semester	2 Autumn Semester
Elective/Compulsory	Elective	Compulsory
Lecturer	SHIGEMORI Masaki Designated Professor	

Course Purpose

This is the first of two courses in analytical mechanics. Analytical mechanics abstracts from Newtonian mechanics and generalizes it to a beautiful and versatile framework that can be applied to various areas of physics, such as quantum mechanics, statistical mechanics, and relativity. After a survey of elementary principles, we discuss the core concepts of Lagrangian and Hamiltonian mechanics, with special emphasis on symmetry principles, followed by some explicit examples.

Prerequisite Subjects

Analytical Mechanics II, Quantum Mechanics I

Course Topics

1. Survey of elementary principles
2. Variational principles and Lagrangian mechanics
3. Symmetries and conservation laws
4. Hamiltonian mechanics
5. Central force problem
It is desirable to read a textbook or reference materials before a class

Textbook

H. Goldstein, C. Poole and J. Safko, "Classical Mechanics", Pearson; 3rd edition (2013), ISBN-10: 1292026553, ISBN-13: 978-1292026558

Additional Reading

L. D. Landau and E. M. Lifschitz, "Mechanics: Volume 1 (Course of Theoretical Physics)", Butterworth-Heinemann; 3rd edition (1976), ISBN-10: 0750628960, ISBN-13: 978-0750628969.
L. N. Hand and J. D. Finch, "Analytical Mechanics", Cambridge University Press (1999), ISBN-10: 0521575729, ISBN-13: 978-0521575720.

Grade Assessment

Will be based on attendance, homework and exams (The details will be announced in class)

Notes

Calculus I & II, Fundamentals of Physics I & II, and concurrent registration of Mathematical Physics I & II

Contacting Faculty

Mathematical Physics I (2.0credits) (数理物理学 1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Elective
Lecturer	John A. WOJDYLO Designated Professor

Course Purpose

This course is a companion course to Mathematical Physics II. This course introduces first order and second order ordinary differential equations and their solution methods. Students master analytical techniques for problems that arise in physics, engineering and chemistry. Questions of uniqueness of solutions and convergence are also discussed. Students are also introduced to Fourier series, the Fourier transform, convolution, Laplace transform, and the Dirac delta function. Students will find this mathematical methods course helpful in other units such as Quantum Mechanics, Analytical Mechanics, Electricity and Magnetism, as well as in Automotive Engineering and other engineering courses. This course has dual aims: 1) to convey mathematical principles; 2) to improve students' technical ability i.e. ability to express intuition in mathematical terms and ability to solve problems.

Prerequisite Subjects

Calculus I; Calculus II; Linear Algebra I; Linear Algebra II, or Consent of Instructor Mathematical Physics Tutorial I, Mathematical Physics II

Course Topics

Course Outline • First order ordinary differential equation (ODE) initial value problems. Integration factor; separable equations; systems of ODEs (Hamiltonian systems); phase plane, flow. Uniqueness and existence theorems. Some differences between linear and nonlinear ODEs. • Second order linear ODE initial value problems. Homogeneous solution. Proving linear independence (Wronskian). Method of Undetermined Coefficients; Variation of Parameters. Series solutions: ordinary point, regular singular point; convergence tests; Method of Frobenius. Examples from physics, engineering and chemistry. • Fourier series. Dirichlet conditions. Role of symmetry. Gibbs phenomenon. Effect of jump discontinuity on speed of convergence. Integration and differentiation of Fourier series. • Fourier transform, convolution, Dirac delta function. Laplace transform. It is desirable to read a textbook or reference materials before a class

Textbook

Boyce W., DiPrima R, Elementary Differential Equations, 7th –10th Ed., Wiley.

Additional Reading

1. Boas M.L., 2006, Mathematical Methods in the Physical Sciences, 3rd ed., John Wiley & Sons. 2. Strang, G., Introduction to Linear Algebra, 4th Edition, Chapter 6.3. Mathematical Physics Tutorial I (1.0credits) (数理物理学演習 1)

Course Type	Basic Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	2 Autumn Semester
Elective/Compulsory	Elective
Lecturer	ABE Tomohiro Designated Assistant Professor

Course Purpose

Students taking Mathematical Physics I should also take this tutorial class. This course introduces first order and second order ordinary differential equations and their solution methods. Students master exact and approximate analytical techniques for initial value problems that arise in physics, engineering and chemistry. Questions of existence, uniqueness and convergence are also discussed. Fourier series follow naturally from the 2nd order theory and these are investigated, too.

Prerequisite Subjects

Calculus I, Calculus II, Linear Algebra I, Linear Algebra II; or Consent of Instructor

Course Topics

Course Contents • First order ordinary differential equation (ODE) initial value problems. Integration factor; separable equations; systems of ODEs (Hamiltonian systems); phase plane, flow. Uniqueness and existence theorems. Some differences between linear and nonlinear ODEs. • Second order linear ODE initial value problems. Homogeneous solution. Proving linear independence (Wronskian). Method of Undetermined Coefficients; Variation of Parameters. Series solutions: ordinary point, regular singular point; convergence tests; Method of Frobenius. Examples from physics, engineering and chemistry. • Fourier series. Dirichlet conditions. Role of symmetry. Gibbs phenomenon. Effect of jump discontinuity on speed of convergence. Integration and differentiation of Fourier series. It is desirable to read a textbook or reference materials before a class

Textbook

There is no designated textbook, but lecture materials will be handed out at every class.

Additional Reading

1. Boas M.L., 2006, *Mathematical Methods in the Physical Sciences*, 3rd ed., John Wiley & Sons. 2. Strang, G., *Introduction to Linear Algebra*, 4th Edition, Chapter 6. 3. Statistical Physics I (2.0credits) (統計物理学 1)

Course Type	Basic Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	2 Autumn Semester	2 Autumn Semester
Elective/Compulsory	Elective	Compulsory
Lecturer	HOSSAIN Akter Designated Lecturer	

Course Purpose

The purpose of Statistical Physics I is to understand the basic laws that govern macroscopic bodies consisting of an enormous number of atoms and molecules. This first part of the course covers universal phenomenological laws, called thermodynamic laws, and their applications.

The main focus of this course is to understand the basic principles of classical thermodynamics which are the basis for macroscopic understanding of all the physical phenomena. The applications in automotive engineering are also introduced.

Prerequisite Subjects

Calculus

Course Topics

1. Thermal Equilibrium and Temperature
2. State Equations, Partial Differentials, Units and Dimensions
3. The First Law of Thermodynamics (energy, isothermal and adiabatic processes)
4. The Second Law of Thermodynamics
5. Entropy
6. Thermodynamic Functions
7. Phase Equilibrium and Chemical Equilibrium
8. Kinetic Theory and Statistical Mechanics

Remarks: To obtain an excellent grade of this course, you have to prepare yourself properly by allocating enough time (i.e., it is your own duty/responsibility) for the assignment and final examination outside the course hours using the printed handouts of the lecture materials.

Textbook

Printed handouts will be provided.

Additional Reading

Modern Engineering Thermodynamics; Robert T. Balmer; Academic Press (2010)

Grade Assessment

Grades will be based on class participation, assignments and a final examination.

30% for attendance

30% for assignments

40% for final examination

Notes

The whole lecture schedules/plans (including the date of the assignment/report, and the date of the final examination and so on) will be announced at the first class of each semester. The contents of the lecture, based on the course topics, will be provided in every lecture. However, the items as stated above are subject to change with prior notice during the semester.

Contacting Faculty

Students can ask questions at any time during classes.

Questions during off-class hours can be asked at the lecturer's room (Engineering Building No.3 North

Inorganic Chemistry I (2.0credits) (無機化学 1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

Inorganic chemistry I is the first part of a three-semester course in inorganic chemistry consisting of parts I, II, and III. Aim of the three-semester course is to present principles and fundamentals of inorganic chemistry, to introduce chemical reactions and to show examples of the role of inorganic chemistry in the industry, environment and every day lives.

Prerequisite Subjects

Fundamentals of Chemistry I and II

Course Topics

The contents of Inorganic Chemistry I will cover the topics of the structure of the atom, orbitals, periodic system of the elements, bonding models, MO theory, symmetry, acids and bases. It is desirable to read a textbook or reference materials before a class

Textbook

Catherine E. Housecroft, Alan G. Sharpe; INORGANIC CHEMISTRY, 5TH EDITION; PEARSON - PRENTICE HALL

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Intermediate 30%, final exam: 70% TOTAL 100% = 100 pts.

Notes

Organic Chemistry II (2.0credits) (有機化学 2)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Jiyoung SHIN Designated Professor

Course Purpose

The main purpose of this course is to acquire a logical framework for understanding fundamental organic chemistry. Many chemical reactions of organic compounds begin with nucleophile-electrophile interactions. This framework provides an influence for chemical reactions of the organic molecules having σ -bonds. On the basis of the knowledge educated following the course contents, the students will be able to solve progressive problems sequentially.

Prerequisite Subjects

Fundamental Chemistries I and II, Organic Chemistry I

Course Topics

Class 1. Electron Configuration of Unsaturated Hydrocarbons and Their Reaction Trends --- Difference of Reactivity between Saturated and Unsaturated Aliphatic Hydrocarbons as well as Aromatic Hydrocarbons
Class 2. Nuclear Magnetic Resonance (NMR) Spectroscopy of Organic Molecules --- Level of Energy Source for Various Spectroscopy; Larmor Frequency and Quantized Energy; Spin Spinning and Applied Magnetic Field; Zeeman Effect and Resonances; Shielding and Deshielding; Downfield and Upfield; Chemical Shifts, Integration, and Peak Splitting; [N+1] rule
Class 3. Preparations of Alkenes and Sequence of Electrophilic Additions of Alkenes --- Potential Energy Stability of Unsaturated Aliphatic Compounds and Electrophilic Additions; Preparations by E2 Elimination and Dehydration; Hydrogenation; Halogenations (toward Monohaloalkane, Dihaloalkane, Halohydrin, and Allylic halide) of Simple Alkenes and Conjugated Dienes
Class 4. Electrophilic Additions of Alkenes --- Hydration; Carbene Addition; Oxidation; Radical Addition; Heck Coupling; Polymerization
Class 5. Assessment of the Classes 1-4 with Practice Problems
Class 6. Reactions of delocalized π -systems (Diels-Alder Reactions and Electrocyclization) --- Efficient Dienes and Dienophiles; Stereochemistry in Diels-Alder Reactions (Endo/Exo cycloadditions and Endo Rule); Thermal and Photochemical Cyclization for Even- and Odd-Numbered Double Bonds
Class 7. Preparations of Alkynes and Sequence of Electrophilic Additions of Alkenes --- Hydrogenation; Halogenation; Hydration
Class 8. Delocalized π -Systems and Reactivity of Benzene --- Stability of Extended Conjugations and the Electron Configuration of Delocalized π -Systems (Nonaromatic/Aromatic/Antiaromatic Compounds); Projection of Resonances
Class 9. Reaction of Benzene --- Electrophilic Aromatic Substitutions (Halogenation, Nitration, Sulfonation, Friedel-Crafts Alkylation, Friedel-Crafts Acylation, Wolff-Kishner and Clemmensen Reductions)
Class 10. Assessment of the Classes 6-9 with Practice Problems
Class 11. Electrophilic Substitutions of Substituted Benzenes --- ortho & para- and meta-Directing Groups and the Reactivities
Class 12. Nucleophilic Substitutions of Benzene (via Benzyne Formation or through Inductive Effects of Substituents)
Class 13. Preparations of Multiply Substituted Benzenes --- Protection/Deprotection of amine; Reduction/Oxidation
Class 14. Electrophilic Substitutions of Fused Aromatic Compounds (Naphthalene and Anthracene)
Class 15. Assessment of the Overall Classes (1-14) with Practice Problems

Textbook

Organic Chemistry: Structure and Function (Seventh Edition), Peter C. Vollhardt and Neil E. Schore, (W. H. Freeman and Company), New York, 2014, Chapters 11-16 and 22

Additional Reading

Organic Chemistry (second edition), Jonathan Clayden, Nick Greeves, and Stuart Warren (Oxford University Press), 2012 ISBN-10:0199270295.

Grade Assessment

Examination [total 70%: two midterms(20% for each) and one final (30%)], Attendance (10%), and Assignment of Homework (20%): S($x \geq 90$), A($90 > x \geq 80$), B($80 > x \geq 70$), C($70 > x \geq 60$), and F($60 > x$)

Notes

In the cases of any unavoidable reasons such as sickness, accident, or no attendance school, the student may get a grade of 'Absent' through the judgment of the course instructor and the student, when the student submits a 'Course Withdrawal Request Form' to receive the 'Absent' grade. No submission of sickness/absence reports and lack of attendance score will result in 'F' grade: It is for the protection of other attendances in the corresponding course from the frequent absences of the specific/uncertain student(s).

Contacting Faculty

Students can communicate with the course instructor face-to-face either in the class or through the appointment. Communication through email (instructor's e-mail: [jyshin@chembio.nagoya-u.ac.jp](mailto: jyshin@chembio.nagoya-u.ac.jp)) is also available.

Physical Chemistry II (2.0credits) (物理化学 2)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Peter BUTKO Designated Professor

Course Purpose

The purpose of this course is to learn what physical chemistry is all about and to grasp important principles and facts about physical chemistry. The focus is on statistical thermodynamics and its applications. The course finishes with a study of kinetics and dynamics of chemical reactions.

Prerequisite Subjects

Physical Chemistry I

Course Topics

Course Contents

- 1 Stat. Thermodynamics 1: The Concepts (Ch. 15)
- 2 Stat. Thermodynamics 2: Applications (Ch. 16)
- 3 Molecular Interactions 1 (Ch. 17)
- 4 Molecular Interactions 2 (Ch. 17)
- 5 Pre-exam Review & EXAM 1 (Chs. 15 – 17)
- 6 Macromolecules and Self-Assembly (Ch. 18)
- 7 Molecules in Motion 1 (Ch. 20)
- 8 Molecules in Motion 2 (Ch. 20)
- 9 The Rates of Chemical Reactions 1 (Ch. 21)
- 10 The Rates of Chemical Reactions 2 (Ch. 21)
- 11 Pre-exam Review & EXAM 2 (Chs. 18, 20 & 21)
- 12 Reaction Dynamics 1 (Ch. 22)
- 13 Reaction Dynamics 2 (Ch. 22)
- 14 Pre-final Review
- 15 FINAL EXAM (Chs. 15 – 18, 21 & 22)

It is desirable to read a textbook or reference materials before a class

Textbook

P. Atkins, J. de Paula & J. Keeler: Atkins' Physical Chemistry, 11th Ed., Oxford University Press, 2018

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Grading

Two exams: 100 points each, final exam (comprehensive): 200, homework: 50. TOTAL: 450.

Criteria for "Absent" & "Fail" Grades

The "Absent" grade is reserved for students that withdraw by the 6th lecture period. After that day, a letter grade will be awarded based on grades earned from all assignments during the semester.

Course Withdrawal

Yes. The last day to withdraw without academic penalty is the 6th lecture period.

Quantum Chemistry I (2.0credits) (量子化学 1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Peter BUTKO Designated Associate Professor

Course Purpose

What exactly is so special about Quantum Mechanics?" The purpose of this course is to introduce quantum mechanics. It begins with an introduction to elementary quantum mechanics and builds up to convey thorough theoretical understanding of atomic electronic structure.

Prerequisite Subjects

Fundamentals of Chemistry I and II, Fundamentals of Physics I to IV, Calculus I and II, Linear Algebra I and II, or permission of the instructor

Course Topics

- 1 From Classical to Quantum Mechanics (Ch. 1)
- 2 Wave Packets and the Schrodinger Equation (Ch. 2)
- 3 The Quantum Mechanical Postulates (Ch. 3)
- 4 Pre-exam Review & EXAM 1 (Ch. 1 – 3)
- 5 The Particle in the Box 1 (Ch. 4)
- 6 The Particle in the Box 2 (Ch. 5)
- 7 Commuting and Non-commuting Operators and the Uncertainty Principle (Ch. 6)
- 8 Harmonic Oscillator: Classical and Quantum Mechanical 1 (Ch. 7)
- 9 Harmonic Oscillator: Classical and Quantum Mechanical 2 (Ch. 7)
- 10 Pre-exam Review & EXAM 2 (Ch. 4 – 7)
- 11 The Vibrational and Rotational Spectroscopy of Diatomic Molecules 1 (Ch. 8)
- 12 The Vibrational and Rotational Spectroscopy of Diatomic Molecules 2 (Ch. 8)
- 13 The Hydrogen Atom (Ch. 9)
- 14 Pre-final Review
- 15 FINAL EXAM (Ch. 1 – 9)

It is desirable to read a textbook or reference materials before a class

Textbook

T. Engel: Quantum Chemistry and Spectroscopy, 3rd Ed. (International edition), Pearson, 2014

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Two exams: 100 points each, final exam (comprehensive): 200, homework: 50. TOTAL: 450.

The "Absent" grade is reserved for students that withdraw by the 6th lecture period. After that day, a letter grade will be awarded based on grades earned from all assignments throughout the semester.

Biochemistry II (2.0credits) (生化学 2)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Elective
Lecturer	YOU Young-Jai Designated Professor

Course Purpose

We will continue to learn the biochemical basis of the living organism.

Prerequisite Subjects

Biochemistry I

Course Topics

1. Review of Biochemistry I: Nucleic acids and genome
2. Review of Biochemistry I: Amino acids and proteins
3. Enzyme properties and kinetics
4. Sugar and Lipids
5. Membrane and membrane transport
6. Signal transduction
It is desirable to read a textbook or reference materials before a class

Textbook

1. Biochemistry by Berg, Tymoczko, Stryer, 8th edition.
2. Principles of Biochemistry by Voet, D., Voet, J.G. and Pratt, C.W., Wiley and son 4th edition.
3. Lehninger Principles of Biochemistry by Nelson and Cox, 7th edition.

Additional Reading

Will be introduced in class

Grade Assessment

Evaluation will be based on in-class participation, assignments and examinations. Absent based on submission of Course Withdrawal Request Form. Fail based on "Failed" results of examinations and assignments.

Notes

Biochemistry I

Cell Biology II (2.0credits) (細胞学 2)

Course Type	Basic Specialized Courses		
Class Format	Lecture		
Course Name	Chemistry		
Starts 1	2 Autumn Semester		
Elective/Compulsory	Elective		
Lecturer	Maria VASSILEVA Designated Associate Professor	DAMNJANOVIC Jasmina Assistant Professor	Joyce A. CARTAGENA Designated Associate Professor

Course Purpose

This course continues the Cell Biology series of courses with purpose to deepen students' knowledge in basic cell organization and functions. Cell Biology II focuses on membranes and intracellular transport, and how cells communicate and respond to the environment. Furthermore, it will provide details on the essential concepts of how plant and animal cells generate energy.

Prerequisite Subjects

Fundamentals of Biology 1

Course Topics

The big theme of the course is membranes. Detailed content: 1. Membrane structure and function 2. Intracellular Compartments and Transport; 3. Cell Communication; 4. How cells obtain energy from food 5. Energy Generation in Mitochondria and Chloroplasts. It is desirable to read a textbook or reference materials before a class

Textbook

Essential Cell Biology, B. Alberts et al., Garland Science.

Additional Reading

Becker's world of the cell, Hardin, Bertoni, Kleinsmith, Pearson. Molecular Biology of the Cell, B. Alberts et al., Taylor & Francis.

Grade Assessment

Evaluation is based on in-class participation, assignments and examinations. Absent: based on submission of Course Withdrawal Request Form. Fail: Total accumulated score of less than 60%.

Notes

Strongly recommended to have completed Fundamentals of Biology 1

Contacting Faculty

mnvassileva@bio.nagoya-u.ac.jp

Electricity and Magnetism (2.0credits) (電磁気学)

Course Type	Basic Specialized Courses		
Class Format	Lecture		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
Starts 1	2 Spring Semester	2 Spring Semester	2 Spring Semester
Elective/Compulsory	Elective	Compulsory	Compulsory
Lecturer	John A. WOJDYLO Designated Professor		

Course Purpose

This course is a solid introduction to electrostatics and magnetostatics. Maxwell's Equations are derived. The course also introduces students to fundamental mathematical methods required to solve problems in physics, engineering and applied mathematics. This course has dual pedagogical aims: 1) to convey physical principles; 2) to improve students' technical ability – i.e. ability to express physical intuition in mathematical terms and ability to solve problems.

Prerequisite Subjects

Calculus I&II; Fundamentals of Physics III&IV; Mathematical Physics II or Consent of Instructor. Physics Tutorial Ia

Course Topics

Course Contents • Revision of vector calculus, curvilinear coordinates, Dirac Delta Function. • Electrostatics. Coulomb's Law. Continuous Charge Distributions. Divergence and Curl of Electrostatic Fields. Field Lines, Flux, and Gauss's Law. Electric Potential. Poisson's Equation and Laplace's Equation. The Potential of a Localized Charge Distribution. Work and Energy in Electrostatics. Conductors. Induced Charges. Surface Charge and the Force on a Conductor. • Special Techniques. The Method of Images: point charge near a conducting plane or sphere, grounded or insulated. Separation of Variables. • Electric Fields in Matter. Polarization. Dielectrics. The Electric Displacement. Linear Dielectrics. • Magnetostatics. The Lorentz Force Law. The Biot-Savart Law. The Divergence and Curl of B. Applications of Ampere's Law. Magnetic Vector Potential A. What is "real", A or B? • Magnetic Fields in Matter. Magnetization. Diamagnetism, Paramagnetism, Ferromagnetism. The Auxiliary Field H. Magnetic Susceptibility and Permeability. • Introduction to Electrodynamics. Electromotive Force. Electromagnetic Induction. Faraday's Law. Energy in Magnetic Fields. Maxwell's Equations. Magnetic levitation above a superconductor. It is desirable to read a textbook or reference materials before a class

Textbook

1. Griffiths, D.L., 2012, Introduction to Electrodynamics, 4th ed., Prentice Hall. Alternative textbook (HIGHLY RECOMMENDED -- many copies in the G30 section of the Science Library): 2. Nayfeh, M. H. & Brussel M. K., Electricity and Magnetism, Dover, 2015. (It is essential that students read at least one of these books. Nayfeh is much cheaper to buy and the explanations are clearer. It covers what we need for EM1.)

Additional Reading

Leighton, R.B. & Feynman, R.P., Feynman Lectures on Physics (Volume 2), Pearson. (Highly recommended alternative reading.)

Grade Assessment

Attendance: 5%; Weekly quizzes or other written assessment: 15%; Mid-term exam: 40%; Final Exam: 40% The "Absent" grade is reserved for students who withdraw by May 16. After that day, a letter grade will be awarded based on marks earned from all assessment during the semester.

Notes

Calculus I&II; Fundamentals of Physics III&IV; Mathematical Physics II or Consent of Instructor. Physics Tutorial Ia

Inorganic Chemistry II (2.0credits) (無機化学 2)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

Inorganic chemistry II is the second part of a three-semester course in inorganic chemistry I, II, and III. Aim of the three-semester course is to present principles and fundamentals of inorganic chemistry and also to show examples of the role of inorganic chemistry in the industry, environment and every day lives.

Prerequisite Subjects

Fundamentals of Chemistry I and II
Related Courses INORGANIC CHEMISTRY I

Course Topics

The contents of Inorganic Chemistry II will cover the topics of solid state Redox reactions, p-block element chemistry. It is desirable to read a textbook or reference materials before a class.

Textbook

Catherine E. Housecroft, Alan G. Sharpe; INORGANIC CHEMISTRY, 5TH EDITION; PEARSON - PRENTICE HALL

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Intermediate 30%, final exam: 70% TOTAL 100% = 100 pts.

Notes

Fundamentals of Chemistry I and II, Inorganic Chemistry I

Structural Chemistry (2.0credits) (構造化学)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Elective
Lecturer	Hideo TAKAGI Associate Professor

Course Purpose

In this course, students will learn theoretical concepts that control structures and reaction pathways of chemical compounds without using complicated mathematics. For this purpose, students will learn basic concepts of the group theory in the first half of this course. Students will learn various point groups, structures of character tables, and basic mathematical techniques related to the group theory. Then students will learn first- and second-order Jahn-Teller effects that are related to the distortions of ground-state structures and the activation energy of chemical reactions. Finally, the students will learn symmetry rules that determine the pathways of reactions. By taking this course, students will understand (1) symmetry elements and symmetry operations of various point groups; (2) methods of mathematical calculations using character tables; (3) method to draw molecular orbital by obtaining group orbitals; (4) analyses of normal mode vibrations of simple molecules by leaning the whole molecule method and internal coordinate method; (5) judgment if a given dipole transition is allowed or not; (6) determination of ground-state structures of various compounds; and (7) judgment if a given reaction is allowed to proceed thermally/ photochemically or not. Students also learn about basic mathematics related to the projection operators and the Great Orthogonality Theorem.

Prerequisite Subjects

chemistry

Course Topics

1. Symmetry elements / operations and point groups
2. Structure of character tables, reducible and irreducible representations, and direct product
3. Kugel Group and subgroup
4. Application of Group Theory 1: group orbital and molecular orbital
5. Application of Group Theory 2: analyses of normal mode vibrations and basic concepts of IR / Raman spectroscopy
6. Application of Group Theory 3: judgments of electronic / IR / Raman transitions
7. Application of Group Theory 4: Jahn-Teller Theorem and structures of compounds
8. Application of Group Theory 5: Allowed and forbidden reactions; Adiabaticity of concerted processes; Symmetry Rules and Principle of Least Motion
It is desirable to read a textbook or reference materials before a class

Textbook

Theories for Structures and Reactions; A Practical Guide to the Physical Theories in Chemistry (by HDT)

Additional Reading

S.F.A. Kettle, Symmetry and Structure a Readable Group Theory for Chemists, Wiley, and other books referred to in the textbook.

Grade Assessment

Final examination (50%), assignments (50 %).

Notes

There are no prerequisites

Contacting Faculty

Organic Chemistry III (2.0credits) (有機化学 3)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Elective
Lecturer	Jiyoung SHIN Designated Professor

Course Purpose

The main purpose of the course is to acquire a logical framework for understanding fundamental organic chemistry. This framework can provide an influence on the reactions of the organic compounds having important functional groups, such as hydroxy, carbonyl, and amino groups and the reactions of their derivatives. On the basis of the knowledge educated following the course contents, the students will be able to solve progressive problems sequentially.

Prerequisite Subjects

Fundamentals of Chemistries I and II, Organic Chemistries I and II

Course Topics

Class 1 & 2. Alcohols and Ethers --- Acidity/Basicity of Alcohols; Preparation of Alcohols (Nucleophilic Substitutions (SN1 & SN2), Reduction of Carbonyl Compounds, Hydrolysis of Esters); Reaction of Alcohols (Deprotonation, Substitution, Elimination, Oxidation, Inorganic Ester Formation); Preparation of Ethers (Williamson Ether Synthesis) and Reaction of Ethers Class 3. Esters --- Inorganic and Organic Esters; Haloalkane Formation from Alcohols via Inorganic Esters; Reaction of Organic Esters (Hydrolysis, Lactones into Open Chain Ester, Esters into Amides and Alcohols, Reduction)Class 4. Acyl Halide --- Reactivity of Carbonyl Compounds (Leaving Ability of Leaving Groups); Reaction of Acyl Halides (Conversion into Carboxylic acid, Anhydride, Ester, Amide, Ketone, Aldehyde, and Phenylalkanone)Class 5. Aldehydes and Ketones --- Preparations of Aldehydes and Ketones (Oxidation of Alcohols, Ozonolysis of Alkenes, Hydration of Alkyenes; Friedel-Crafts Acylation)Class 6. Reactions of Aldehydes and Ketones --- Grignard Reaction; Hydration (in acid/base); Acetalization/Deacetalization; Thioacetalization/Dethioacetalization/DesulfurizationClass 7. Reactions of Aldehydes and Ketones --- Conversions into Cyanohydrin; Wittig Reaction; Baeyer-Villiger Oxidation; Conversion into Imine, Oxime, and Hydrazone; Reduction of Acyl Compounds into AlkanesClass 8. Assessment of the Classes 1-7 with Practice ProblemsClass 9. Enols and Enolates --- Reactivity and Reaction Trends of Carbonyl Compounds in Acid and Base Class 10. Reactivities of Formaldehyde, Aldehydes and Ketones and Their Reactions --- Reactions with Amines (into Imine, Iminium, and Enamine) and Reaction Comparison; Mannich Reaction Class 11. Reactions of Conjugated Aldehydes, Ketones, --- Preparation of Conjugate Carbonyl Compounds; 1,2-addition versus 1,4-addition; Soft and Hard Base Nucleophiles; Michael Additions; Robinson Annulation Class 12. Carboxylic Acids --- Preparation of Carboxylic acids (Alcoholysis, Hydrolysis, Over Oxidation of Primary Alcohols, Reduction of CO₂, Conversion of Nitrile into Carboxylic Acid)Class 13. Reactions of Carboxylic Acids --- Hell-Volhard-Zelinsky Bromination; Acyl Chloride Formation; Anhydride Formation; Decarboxylation Class 14. Intermolecular/Intramolecular Cross Condensations --- Aldol Condensation; Claisen Condensation; Retro-Claisen Condensation; Dieckmann CondensationClass 15. Assessment of Overall Classes (1-14) with Practice Problems

Textbook

Organic Chemistry: Structure and Function (Seventh Edition), Peter C. Vollhardt and Neil E. Schore, (W. H. Freeman and Company), New York, 2014, Chapters 8-9, and 17-20.

Additional Reading

Organic Chemistry (second edition), Jonathan Clayden, Nick Greeves, and Stuart Warren (Oxford University Press), 2012 ISBN-10:0199270295.

Grade Assessment

Examination [midterm (40%) and final (40%)], Attendance and Assessment of homework (20%): S($x \geq 90$), A($90 > x \geq 80$), B($80 > x \geq 70$), C($70 > x \geq 60$), and F($60 > x$).

Notes

In the cases of any unavoidable reasons such as sickness, accident, or no attendance school, the student may get a grade of 'Absent' through the judgment of the course instructor and the student, when the student submits a 'Course Withdrawal Request Form' to receive the 'Absent' grade. No submission of sickness/absence reports and lack of attendance score will result in 'F' grade: It is for the protection of other attendances in the corresponding course from the frequent absences of the specific/uncertain student(s).

Contacting Faculty

Students can communicate with the course instructor face-to-face either in the class or through the appointment. Communication through email (instructor's e-mail: [jyshin@chembio.nagoya-u.ac.jp](mailto: jyshin@chembio.nagoya-u.ac.jp)) is also available.

Quantum Chemistry II (2.0credits) (量子化学 2)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Peter BUTKO Designated Professor

Course Purpose

We will employ the principles of quantum mechanics to study chemical bonding and molecular structure.

Prerequisite Subjects

Fundamentals of Chemistry I and II, Fundamentals of Physics I to IV, Calculus I and II, Linear Algebra I and II

Course Topics

1 Many-Electron Atoms (Ch. 10)2 Introduction to the Gaussian software3 Quantum States for Many-Electron Atoms and Atomic Spectroscopy (Ch. 11)4 The Chemical Bond in Diatomic Molecules 2 (Ch. 12)5 Pre-exam Review & EXAM 1 (Ch. 10 12)6 Molecular Structure and Energy Levels for Polyatomic Molecules 1 (Ch. 13)7 Molecular Structure and Energy Levels for Polyatomic Molecules 2 (Ch. 13)8 Electronic Spectroscopy 1 (Ch. 14)9 Electronic Spectroscopy 2 (Ch. 14)10 Pre-exam Review & EXAM 2 (Ch. 13 14)11 Molecular Symmetry 1 (Ch. 16)12 Molecular Symmetry 2 (Ch. 16)13 Pre-final Review14 FINAL EXAM (Ch. 10 16)It is desirable to read a textbook or reference materials before a class

Textbook

T. Engel: Quantum Chemistry and Spectroscopy, 3rd Ed. (International edition), Pearson, 2013

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Two exams: 100 points each, final exam (comprehensive): 200, homework: 50. TOTAL: 450.The "Absent" grade is reserved for students that withdraw by the 6th lecture period. After that day, a letter grade will be awarded based on grades earned from all assignments throughout the semester.

Notes

Earth and Planetary Science (2.0credits) (地球惑星科学)

Course Type	Basic Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	3 Autumn Semester	3 Autumn Semester
Elective/Compulsory	Elective	Elective
Lecturer	Marc HUMBLET A. Designated Associate Professor	

Course Purpose

In this course students will learn about the characteristics of the planets and other components of our solar system (orbital parameters, atmospheric conditions, internal structure and composition, geomorphology, geological activity). We will use the knowledge of our own planet Earth as a reference to understand processes occurring elsewhere. During the past fifty years, various spacecrafts and exploration vehicles have been used to considerably expand our knowledge of the solar system and send back to Earth ever more detailed pictures of distant worlds. The course will review the different means of space exploration and use abundant data acquired by past and ongoing missions to illustrate the characteristics of the planets. A recurrent topic throughout the course will be the fascinating question of the existence of extraterrestrial life and its detection. We will also discuss the future of space exploration.

Prerequisite Subjects

characteristics of the planets and other components of our solar system

Course Topics

1. Introduction 2. The Solar System 3. Space Exploration 4. The Earth-Moon System 5. Mercury 6. Venus 7. Mars 8. The asteroid belt 9. Jupiter 10. Saturn 11. Uranus & Neptune 12. Trans-Neptunian Objects
It is desirable to read a textbook or reference materials before a class

Textbook

There is no designated textbook, but lecture materials will be handed out.

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Two quizzes: 20% (10% each) Two short reports: 20% (10% each) Oral presentation: 20% Written essay: 40%
A student will be given an "Absent" grade if he or she submits a Course Withdrawal Request Form by the end of November. This deadline does not apply to students who drop the class part-way through for an exceptional reason (e.g. illness, accident). A "Fail" grade is given to students who obtain a final score of less than 60%.

Notes

There are no prerequisites

Contacting Faculty

Chemistry of Inorganic Materials I (2.0credits) (無機材料化学1)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

The purpose of this course is to understand the chemical and physical properties of various inorganic materials, their functions, and their applications.

Prerequisite Subjects

Inorganic Chemistry I, Fundamentals in Chemistry I + II

Course Topics

Solid State Chemistry

crystal structure

glass

defect

phase diagram

synthesis

bond

It is desirable to read a textbook or reference materials before a class

Textbook

- Solid State Chemistry and its Applications (2nd Edition, Student Edition), Anthony R. West; Wiley 2014

Additional Reading

order it during a class as needed

Grade Assessment

Activity (homework, quizzes, attendance): 10%

Presentation: 20%

Intermediate and final exam: 70% (20% intermediate, 50% final exam, comprehensive)

TOTAL 100% = 100 pts

Grades are final and calculated on the basis of the performances during class, the presentation and in the two exams only. There will be no possibility to improve a grade after the final exam. Students who miss the final exam due to a (documented) illness, injury or other unavoidable reasons can ask the instructor.

Notes

Fundamentals of Chemistry I and II, Inorganic Chemistry 1

Contacting Faculty

Quantum Chemistry III (2.0credits) (量子化学 3)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Kazuhiro FUJIMOTO Designated Associate Professor

Course Purpose

The accurate description of the electronic structure of large molecules is an important topic in the field of quantum chemistry, and is required for the accurate understanding of chemical phenomena. In this class, theoretical concepts for large-scale calculations will be covered.

Prerequisite Subjects

Quantum Chemistry I & II

Course Topics

1. Born-Oppenheimer approximation
2. LCAO-MO theory: Hartree-Fock theory
3. Electron correlation problem
4. Basis sets in quantum chemical calculations
5. Intermolecular interactions
6. Molecular mechanics
7. How to treat large number of particles (QM/MM, FMO, and DC)

It is desirable to read a textbook or reference materials before a class

Textbook

do not appoint the textbook

Additional Reading

Modern Quantum Chemistry: Introduction to Advanced Electronic Structure Theory (A. Szabo and N.S. Ostlund), Dover Publications, Inc.

Grade Assessment

Final examination and attendance

Earth Environmental Science (2.0credits) (地球環境科学)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Marc HUMBLET A. Designated Associate Professor

Course Purpose

Never before have had humans such a profound impact on the Earth. The world population exceeds 7 billion and is growing steadily. Industrial and technological needs for energy and mineral resources are increasing every year. In this course, we will see how humanity is changing the environment. We will explore climate change in the geological past and the relationships between human activities and climate today. The students will also learn about the nature and usefulness of geological resources and the environmental threats posed by petroleum and mineral industries. Finally, we will reflect on the opportunities and challenges for a sustainable use of geological resources.

Prerequisite Subjects

Fundamental of Earth Science I & II

Course Topics

1. Introduction
2. Earth cycles 1: Nitrogen cycle
3. Earth cycles 2: Phosphorus cycle
4. Earth cycles 3: Water cycle
5. Earth cycles 4: Carbon cycle
6. Paleoclimatology
7. Recent climate change
8. Geological Resources: Energy, Rocks, and Minerals
9. Toward a sustainable future
It is desirable to read a textbook or reference materials before a class

Textbook

do not appoint the textbook

Additional Reading

order it during a class as needed

Grade Assessment

Two quizzes: 20% (10% each)
Two short reports: 20% (10% each)
Oral presentation: 20%
Written essay: 40%

Notes

do not need the study condition

Chemistry and Biotechnology Laboratory 1 (3.0credits) (化学生命工学実験 1)

Course Type	Basic Specialized Courses
Class Format	Experiment
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

In order to cultivate academic skills, qualities, and abilities to develop engineering, it is necessary to acquire various experimental knowledge and operations. The aim of this experiment is to acquire basic experimental knowledge and operations in analytical chemistry and physical chemistry with backgrounds in subjects of chemical reactions, chemical equilibrium, thermodynamics, reaction kinetics, spectroscopy, electrochemistry, and computational chemistry. It also enhances the development of the ability to organize and analyze data and create reports.

By the end of this experiment, students should be able to do the following:

1. Acquire experimental operation on fundamentals of analytical chemistry and physical chemistry.
2. Deepen the understanding of chemical reaction, chemical equilibrium, thermodynamics, reaction kinetics, spectroscopy, electrochemistry, computational chemistry, etc.
3. Design experimental plans, organize and analyze data, and discuss results.
4. Create a logical report.
5. Acquire the foundation of applied and comprehensive skills required for future professional research.

Prerequisite Subjects

Elemental Chemistry I & II, Analytical Chemistry 1 & 2 with Exercises, Chemical Kinetics with Exercises, Thermodynamics 1 & 2 with Exercises, Structural Chemistry and Electrochemistry with Exercises, Quantum Chemistry 1 & 2 with Exercises, Safety in Laboratory

Course Topics

Experiment I. Titration experiment

Experiment II. Analytical chemistry experiment, Instrument analysis experiment, Physical chemistry experiment

The following themes are set as analytical chemistry experiment, instrumental analysis experiment, and physical chemistry experiment.

1. UV-Vis and fluorescence spectrophotometry, 2. Chromatography, 3. IR spectroscopy, 4. Gel electrophoresis, 5. Raman spectroscopy, 6. Electrochemistry, 7. Osmotic pressure, 8. Quantum chemical calculation, 9. Electron spin resonance, 10. X-ray diffraction. 11. TG and DTA, 12. Electron microscope

Read the experimental guideline before each experiment. In addition, a report task is assigned for each experiment. After organizing, analyzing, and considering the experimental results, submit it as a report by the submission deadline.

Textbook

Use an experimental guideline prepared for each topic. How to obtain the experimental guideline will be announced during the experiment guidance.

Additional Reading

Other instructions will be given as needed.

Grade Assessment

Chemistry and Biotechnology Laboratory 1 (3.0credits) (化学生命工学実験 1)

Grading will be decided based on the approach to the experiment (positiveness, activeness), logical thinking / judgment for the results, experimental skills and reports. Credits will be awarded to those students who score 60 or more out of 100 points. Grades are as follows:

Enrollees after 2020

A+: 100-95A: 94-80B: 79-70C: 69-65C-: 64-60F: 59-0

Enrollees before 2019

S: 100-90A: 89-80B: 79-70C: 69-60F: 59-0

Notes

Except for transfer students and G30 students, students must have earned credit for “Safety in Laboratory.” It is desirable to take other background courses, but you can take this experiment even if you have not taken them.

Contacting Faculty

Professors and teaching assistants will answer the questions.

Chemistry and Biotechnology Laboratory II (3.0credits) (化学生命工学実験 2)

Course Type	Basic Specialized Courses
Class Format	Experiment
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

This laboratory class aims to learn fundamental experimental procedures on organic chemistry and biotechnology.

Prerequisite Subjects

Elemental Chemistry I & II, Organic chemistry 1 ~ 4 with Exercises, Biochemistry 1~ 3 with Exercises, Safety in Laboratory

Course Topics

* Safety in chemical laboratory

* Basic organic chemistry

1. spectroscopy in organic chemistry, 2. separation and synthesis of olefin compounds and reactivity of olefinic bond, 3. separation and purification of organic compounds, 4. identification of unknown compounds

* Basic Biotechnology

1. bacterial culture, 2. enzyme reaction

Textbook

Use an experimental guideline prepared for each topic. How to obtain the experimental guideline will be announced during the experiment guidance.

Additional Reading

Vollhardt/Schore Organic Chemistry Structure and Function; K. P. C. Vollhardt, N. E. Schore
Biochemistry EIGHTH EDITION; J. M. Berg, J. L. Tymoczko, G.J. Gatto, Jr., L. Stryer

Grade Assessment

Evaluated by implementation of experiments and experimental reports

Credits will be awarded to those students who score 60 or more.

Grades are as follows:

A+:100-95, A:94-80, B:79-70, C:69-65, C-:64-60, F:59-0.

Notes

It is desirable to take prerequisite subject, but you can take this experiment even if you have not taken them.

Contacting Faculty

Professors and teaching assistants will answer the questions.

Inorganic Chemistry III (2.0credits) (無機化学 3)

Course Type	Basic Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

Inorganic chemistry III is the final part of a three-semester course in inorganic chemistry consisting of parts I, II, and III. Aim of the three-semester course is to present principles and fundamentals of inorganic chemistry, to introduce chemical reactions and to show examples of the role of inorganic chemistry in the industry, environment and every day lives.

Prerequisite Subjects

Fundamentals of Chemistry I and II, Analytical Chemistry, Inorganic Chemistry I, Inorganic Chemistry II

Course Topics

The contents of Inorganic Chemistry III will cover the topics of the coordination chemistry of transition metals (d and f block elements), organometallic compounds of s,p,d-block elements and an introduction to catalysis. It is desirable to read a textbook or reference materials before a class

Textbook

Catherine E. Housecroft, Alan G. Sharpe; INORGANIC CHEMISTRY, 5TH EDITION; PEARSON - PRENTICE HALL (For those students who have attended my previous lectures of Inorganic Chemistry I and II and already have the previous edition textbook, it will not be necessary to acquire the new edition)

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Activity (homework, quizzes, attendance): 10% Intermediate and final exam: 90% (30% intermediate, 60% final exam, comprehensive) TOTAL 100% = 100 pts

Notes

Fundamentals of Chemistry I and II, Analytical Chemistry, Inorganic Chemistry I, Inorganic Chemistry II

Contacting Faculty

Either after the classes or during the office hours/by email (to be announced) E-mail:
gsamjeske@chem.nagoya-u.ac.jp

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	2 Spring Semester
Elective/Compulsory	Elective
Lecturer	Part-time Faculty

Course Purpose

This course is provided to give a broad overview of activities in chemical and biological industries in Japan. Lectures will be given in English. The course is open to both Japanese and foreign students. Students will understand R&D trend and current status of production activities in chemical and biological industries in Japan.

Prerequisite Subjects

N/A

Course Topics

This course introduces the state-of-the-art and the future of R&D and production activities of chemical and biological industries in Japan. Their relationships with the human society, how they are involved in the energy and environmental issues, their roles in international societies, etc. are also discussed. Researchers who have ample experience in working abroad are invited to give stimulating lectures in English.

1. R&D process in biotechnology companies 2. Materials design with considering environmental issues 3. Process Engineering of Advanced Ceramics

Homework will be assigned.

Textbook

Not specified. Handouts will be supplied if necessary.

Additional Reading

Not specified. It will be introduced when necessary.

Grade Assessment

Grades will be decided based on reports. Reports will be evaluated by the level of comprehension and ability of rational discussion on the subject.

Credits will be awarded to those students who score 60 or more.

Grades are as follows: S:100 - 90, A:89 - 80, B:79 - 70, C:69 - 60, F:59 - 0.

Notes

N/A

Contacting Faculty

Ask to the lecturers in the class.

Biophysics (2.0credits) (生物物理学)

Course Type	Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	2 Spring Semester	2 Spring Semester
Elective/Compulsory	Elective	Compulsory Elective
Lecturer	TAMA Florence Muriel Professor	

Course Purpose

To understand the basics of biophysics, in which biological phenomena are described in terms of physics language

Prerequisite Subjects

biophysics

Course Topics

The course will cover structure of biomolecules (proteins, nucleic acids, membranes) before introducing biophysical techniques (experimental and computational) to characterize function/dynamics/folding of these biomolecules. It is desirable to read a textbook or reference materials before a class

Textbook

There is no designated textbook, but lecture materials will be handed out.

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

The final grade will be based on a mid-term exam, student presentations, assignments and attendance. Class attendance is required. Absentee must give a valid reason. A student will be regarded as ABSENT if he/she is absent from lecture more than 3 times or he/she is absent without valid reason from the mid term exam and student presentation.

Notes

There are no prerequisites

Organic Chemistry V (2.0credits) (有機化学 5)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Elective
Lecturer	Jiyoung SHIN Designated Professor

Course Purpose

The main purpose of the course is to learn the spectroscopic analysis of organic molecules and the interpretation of the spectral data. The course begins with theoretical/fundamental knowledge on the chromatographic and spectroscopic techniques (GC, HPLC, NMR, UV, IR, Raman, Mass, and so on), and continues to assign the structures of organic molecules within Spectra-type problems. Furthermore, the course also covers problem-solving in regard to organic reactions in an effort to reinforce students' understanding of the molecular structures/reactivities. Students will be able to solve progressive problems sequentially.

Prerequisite Subjects

Organic chemistries I-II

Course Topics

Class 1 & 2. Purification/Separation of Organic Molecules --- Chromatographic Principles and Methods; Gas Chromatography and Liquid Chromatography
Class 3. Principle of Mass Spectrometry --- Ionization Techniques (EI, CI, FAB, ESI, APCI); Ion Separation Techniques (Magnetic Sector, Quadrupole, Ion Trap, TOF, FT); Fragmentations (Heterolytic and Homolytic Cleavages); Mass Patterns of Isotopes
Class 4. Assignment of Mass Spectra --- Guidelines for predicting prominent peaks in EI Spectra for Alcohols, Ethers, Ketones, Carboxylic Acids, Carboxylic Esters, Amines, and Aliphatic Sulfides
Class 5. Vibration Spectroscopy --- FT-IR Absorption Spectroscopy and Raman Spectroscopy; Rayleigh and Stokes/Antistokes lines; Molecular Vibrational Motions; Assignment of IR Spectra of Organic Molecules
Class 6. UV-Vis Absorption Spectroscopy --- Wavenumber & Wavelength; Map of UV/vis absorption spectrometer (Monochromator and Diode type); Beer-Lambert Law and Molecular Absorption Coefficient; Electron Transitions Involving p/s/n Electrons, Charge-Transfer Electrons, and d/f Electrons; π -Conjugated Systems; Absorption in Gaseous States
Class 7. Emission Spectroscopy --- Jablonski Energy Diagram and Electron Spin States; Fluorescence and Phosphorescence; Stokes Shift; Instrumental Outlines; Lifetime Decay Profiles; Quantum Yield; Steady State & Transient Absorption Spectroscopy
Class 8 & 9. Fundamental Principle of NMR Spectroscopy --- NMR Active/Inactive Nuclei; External Magnetic Field, Larmor Frequency, Resonance Feature, Saturation and Net Magnetization, 90 Degree Pulse, Spin-Spin Decay, FT of FID, Structure of NMR Machine, Chemical Shift, Shielding/Deshielding, J coupling; Karplus Curve for Vicinal Couplings and Cis/Trans Correlation; Shimming; Probe Tuning; Locking; Important Parameters for NMR Analysis
Class 10. Characterization of Molecular Structure and Assignment of NMR Spectra, and Advanced Technique --- Peak Assignments of NMR Spectra of Example Organic Compounds (^1H , COSY, NOESY, ROESY, APT ^{13}C , HSQC, HMBC, TOCSY NMR Spectra); NMR Spectra of Paramagnetic Metal Complex
Class 11. Students' Presentation and Discussion (Assessment of the Classes 1-10)
Class 12. Problem-Solving Process for Structure Determination and the Corresponding Organic Reaction
Class 13. Problem-Solving Process for Structure Determination and the Corresponding Organic Reaction
Class 14. Problem-Solving Process for Structure Determination and the Corresponding Organic Reaction
Class 15. Course Assessment with Final Test and Solution Steps

Textbook

- Organic Chemistry: Structure and Function (Seventh Edition), Peter C. Vollhardt and Neil E. Schore, (W. H. Freeman and Company), New York, 2014, Chapters 10-21. - Handout materials of the lectures will be given in the respective classes.

Additional Reading

1. Spectrometric Identification of Organic Compounds (8th Edition), Robert M. Silverstein, Francis X. Webster, David J. Kiemle, and David L. Bryce, (Wiley), 2012, ISBN-10:0470616377. 2. Spectroscopic Methods in Organic Chemistry (2nd Edition) Manfred Hesse, Herbert Meier, Bernd Zeeh (Translated by Richard Dunmur, Martin Myrray), Thieme, New York, ISBN 978-1-58890-488-1. 3. 50 and more essential NMR experiments (A Detailed Guide), Matthias Findeise and Stefan Berger, Wiley-VCH, Verlag GmbH & Co. KGaA, 2014.

Grade Assessment

Presentation (40%) and Examination (50%); Attendance and Assessment of Homework (10%): Credits will be awarded to those students who score 60 or more. Grades are as follows: S($x \geq 90$), A($90 > x \geq 80$), B($80 > x \geq 70$), C($70 > x \geq 60$), and F($60 > x$).

Notes

In the cases of any unavoidable reasons such as sickness, accident, or no attendance school, the student may get a grade of 'Absent' through the judgment of the course instructor and the student, when the student submits a 'Course Withdrawal Request Form' to receive the 'Absent' grade. No submission of sickness/absence reports and lack of attendance score will result in 'F' grade: It is for the protection of other attendances in the corresponding course from the frequent absences of the specific/uncertain student(s).

Contacting Faculty

Students can communicate with the course instructor face-to-face either in the class or through the appointment. Communication through email (instructor's e-mail: [jyshin@chembio.nagoya-u.ac.jp](mailto: jyshin@chembio.nagoya-u.ac.jp)) is also available.

Polymer Chemistry (2.0credits) (高分子化学)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Elective
Lecturer	Faculty of Chemistry

Course Purpose

The purpose of this course is to learn basics of polymer science. The course begins with basic concepts of polymer, proceeds next to polymerization and synthesis of various polymers, and moves then to characterization, structures, properties, and functions of polymers, and biopolymers.

Upon taking this course, you aim to learn basics of polymer science, such as what polymers are, how to make polymers, how to characterize polymer properties, how properties are affected by polymer structures, how to design functional polymers, and how biopolymers are different from synthetic polymers. You will get basic knowledge on polymer science first and then abilities to apply the basic knowledge to creating new polymer materials.

Prerequisite Subjects

Fundamentals of Chemistry I, II, Organic Chemistry I, II, Physical Chemistry I, II, Analytical Chemistry

Course Topics

1. Introduction to Polymer
2. Step-Growth Polymerization
3. Free-Radical Addition Polymerization
4. Ionic Polymerization
5. Linear Copolymers and Other Architectures
6. Polymer Stereochemistry
7. Polymerization Reactions Initiated by Metal Catalysts and Transfer Reactions
8. Polymers in Solution
9. Polymer Characterization – Molar Masses
10. Polymer Characterization – Chain Dimensions, Structures, and Morphology
11. The Crystalline State and Partially Ordered Structures
12. The Glassy State and Glass Transition
13. Rheology and Mechanical Properties
14. The Elastomeric State
15. Structure-Property Relations
16. DNA and RNA that Encode Genetic Information as their Sequences
17. Higher-Order Structures of Polypeptides and Protein

Prior to taking each class, read the corresponding part of the textbook. After taking the class, solve the problems in the textbook by yourself. During each class, solve the quizzes.

Textbook

Polymers: Chemistry and Physics of Modern Materials (J. M. G. Cowie and Valeria Arrighi), 3rd Edition; CRC Press

Additional Reading

Principles of Polymerization (G. Odian), 4th Edition, Wiley-Interscience

Grade Assessment

Quizzes during classes.

Credits will be awarded to those students who understand basics on synthetic and bio-based polymers, polymerization, polymer characterization, structures, properties, and functions. Advanced understandings will be considered.

Notes

There are no requirements for taking this course.

Contacting Faculty

Students can communicate with their lecturers after lectures.

Chemical Physics (2.0credits) (化学物理学)

Course Type	Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	3 Autumn Semester	3 Autumn Semester
Elective/Compulsory	Elective	Compulsory Elective
Lecturer	YukoOKAMOTO Professor	

Course Purpose

The purpose of this course is to learn about the statistical thermodynamics which can describe the behaviors of molecules in physical, chemical, and biological systems.

Prerequisite Subjects

Biophysics, Statistical Physics I

Course Topics

1. Mathematical Tools
2. Extremum Principles
3. Heat, Work, and Energy
4. Entropy and the Boltzmann Law
5. Thermodynamic Driving Forces
6. The Logic of Thermodynamics
7. Laboratory Conditions and Free Energy
8. Maxwell's Relations and Mixtures
9. The Boltzmann Distribution Law
10. The Statistical Mechanics of Simple Gases and Solids
11. Temperature and Heat Capacity
12. Chemical Equilibrium
It is desirable to read a textbook or reference materials before a class

Textbook

K.A. Dill and S. Bromberg, "Molecular Driving Forces" 2nd ed. (Garland Science).

Additional Reading

F. Reif, "Fundamentals of Statistical and Thermal Physics" (McGraw-Hill).

Grade Assessment

Attendance: 10 %, Homework Sets: 20 %, Exams: 70 %
The "Absent" grade is reserved for students who withdraw by the day that is specified by the University. After that day, a letter grade will be awarded based on marks earned from all assessment during the semester.

Notes

There are no prerequisites

Email: okamoto@tb.phys.nagoya-u.ac.jp

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	3 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

The purpose of the course is to gain essential knowledge in the fields of inorganic and physical chemistry through exercises. Topics to be covered include physical chemistry and inorganic chemistry. Students are expected to focus on four separate topics.

Prerequisite Subjects

Chemical Thermodynamics, Quantum Chemistry, Reaction Kinetics, Basic Inorganic Chemistry, Complex Chemistry

Course Topics

Submission of the reports on assignments is required before the class.

- I. Basic Inorganic Chemistry, Complex Chemistry;
- II. Chemical Thermodynamics;
- III. Quantum Chemistry;
- IV. Reaction Kinetics

Textbook

Will be introduced in the class.

Additional Reading

Will be introduced in the class.

Grade Assessment

Grades will be based on homework assignments and a final examinations. Students are expected to actively participate in class discussions, and must obtain a score of 60 or higher to pass the course.

Notes

No registration requirements

Organic Chemistry IV (2.0credits) (有機化学 4)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Jiyoung SHIN Designated Professor

Course Purpose

The main purpose of this course is to acquire a logical framework for understanding advance organic chemistry. The course begins with condensations of carbonyl and amine compounds and moves on the reactions comprising migration steps. Heterocyclic chemistry and organometallic chemistry are rapidly-expanding fields, which students are educated. organometallic compounds incorporating the function of the carbon-metal bonds as powerful nucleophiles, such compounds have been widely used for effective synthetic transformation. Replacement of the first metal by new can activate or control the outcomes of the chemical reactions. On the basis of the knowledge, how to perceive appropriate answers of challenging problems in organic chemistry is encountered.

Prerequisite Subjects

Fundamental Chemistry I and II, Organic Chemistry I, II, and III

Course Topics

Class 1. Reaction of Carbonyl Compounds --- Formations, Condensations, Reaction of Conjugated Carbonyl Compounds; Protection of Acyl Group; Decarboxylation of beta-Carbonyl Carboxylic Acid Class 2. Amines --- Preparations of Amines (by Subsequent Alkylation, Reduction of Nitrile, Reduction of Imine, Reduction of Azide, Hydrogenation of Amide, Hofmann Rearrangement, Mannich Reaction, Gabriel Phthalimide Synthesis) Class 3. Amines --- Reactions of Amines (Alkylation, Acylation, Hoffmann Elimination) Class 4. Six-Membered Aromatic Heterocycles (Pyridine, Pyridazine, Pyrimidine, Pyrazine, Pyridine Derivatives, and PCC) --- Electron Configuration and Reactivity of Pyridine; Preparation of Pyridine; pyrillium ion & pyrones Tautomerization of Hydroxypyridine into pyridone, Preparation of Pyridone Class 5. Preparation and Nucleophilic/Electrophilic Substitutions of Pyridine N-Oxides; Reactivity of Pyridine N-Oxide and Pyridine with Electron Donating Groups in Electrophilic Substitutions Class 6. Five membered Aromatic Heterocycles (Pyrrole, Pyrazole, Imidazole, and Triazole) --- Electron Configuration of Pyrrole and Reactivity for Electrophilic Substitution; Electrophilic Substitutions of pyrrole (Bromination, Acylation, Mannich Reaction, Nitration, Polymerization); Preparation of Pyrrole Class 7. Five membered Aromatic Heterocycles --- Reaction of Pyrrole (Decarboxylation, Acid-Catalyzed Intermolecular Condensation, Porphyrin Synthesis); Reaction of Thiophene (Friedel Crafts Acylation of 2-Methyl Thiophene); Reaction of Furane (Bromination, Acetal Formation, Ring Opening) Class 8. Fused Heterocycles (Quinoline, Isoquinoline, and Indol) --- Substitution Trends of Quinoline and Isoquinoline (Electrophilic and Nucleophilic Reactions); Preparation of Quinoline; Substitution Trends of Indol; Preparation of Indol Class 9. Assessment of Classes 1-8 (Problems and Solutions) Class 10. Ring Formation from pi-Conjugation – Electrocyclizations (Thermal & Photochemical Reactions); Cycloadditions (Diels-Alder Reactions); Sigmatropic Rearrangements (Cope Rearrangement, Claisen (General, Johnson-Claisen, Eschenmoser-Claisen, Ireland-Claisen) Rearrangements, Sulfoxide Formation Through [2,3] Sigmatropic Rearrangement) Class 11. Ring Expansion or Ring Shrinking Reactions --- Baeyer Villiger Oxidation; Beckmann Rearrangement; Tiffeneau-Demjanov Rearrangement; Favoskii Rearrangement; Wagner Meerwein Rearrangement Class 12-13. Organotransition Metal Chemistry: Electronegativity Differences and Organometal Reactions; Pd-catalyzed Cross Couplings (Negish, Kumada, Stille, Suzuki-Miyaura, Sonogashira, Hiyama, Mizoroki-Heck Cross Couplings) Class 14. Organotransition Metal Chemistry: Organometal Catalyzed Metathesis (Grubbs & Schrock's Catalysts and the Cyclic Metathesis); Ziegler-Natta Catalysis; Wilkinson Reduction Class 15. Assessment of Overall Classes (Final Test and Solution Process)

Textbook

Organic Chemistry: Structure and Function (Seventh Edition), Peter C. Vollhardt and Neil E. Schore, (W. H. Freeman and Company), New York, 2014, Chapters 21, 23-26.

Additional Reading

1. Organic Chemistry (Second edition), Jonathan Clayden, Nick Greeves, and Stuart Warren, Oxford, 2012, Chapters 29-30, and 40. 2. Advanced Organic Chemistry (Part B: Reaction and Synthesis, Fifth Edition), Francis A. Carey, Richard J. Sundberg, Springer, 2007, Chapters 7-8.3. Organometallic Chemistry (Second Edition), Gary O. Spessard, Gary L. Miessler, Oxford, 2010.

Grade Assessment

Examination (one midterm and one final: 80%); Attendance and Assessment of Homework (20%): Credits will be awarded to those students who score 60 or more. Grades are as follows: S(x90), A(90>x80), B(80>x70), C(70>x60), and F(60>x).

Notes

In the cases of any unavoidable reasons such as sickness, accident, or no attendance school, the student may get a grade of 'Absent' through the judgment of the course instructor and the student, when the student submits a 'Course Withdrawal Request Form' to receive the 'Absent' grade. No submission of sickness/absence reports and lack of attendance score will result in 'F' grade: It is for the protection of other attendances in the corresponding course from the frequent absences of the specific/uncertain student(s).

Contacting Faculty

Students can communicate with the course instructor face-to-face either in the class or through the appointment. Communication through email (instructor's e-mail: [jyshin@chembio.nagoya-u.ac.jp](mailto: jyshin@chembio.nagoya-u.ac.jp)) is also available.

Chemistry of Inorganic Materials II (2.0credits) (無機材料化学 2)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	SAMJESKE Gabor arwed Designated Professor

Course Purpose

The purpose of this two semester course is to understand the chemical and physical properties of various inorganic materials, their functions, their analysis and their applications.

Prerequisite Subjects

Fundamentals of Chemistry I & II, Inorganic Chemistry I & II, Chemistry of Inorganic Materials I

Course Topics

Solid State Chemistry
Analysis
Electric properties
Magnetic properties
Optical properties

It is desirable to read a textbook or reference materials before a class

Textbook

Solid State Chemistry and its Applications (2nd Edition, Student Edition), Anthony R. West; Wiley 2014

Additional Reading

Instructions will be given as necessary in class

Grade Assessment

Activity (homework, quizzes, attendance): 10%

Presentation: 20%

Intermediate and final exam: 70% (20% intermediate, 50% final exam, comprehensive)

TOTAL 100% = 100 pts

Grades are final and calculated on the basis of the performances during class, the presentation and in the two exams only. There will be no possibility to improve a grade after the final exam. Students who miss the final exam due to a (documented) illness, injury or other unavoidable reasons can ask the instructor.

Notes

Fundamentals of Chemistry I & II, Inorganic Chemistry I & II, Chemistry of Inorganic Materials I

Computational Chemistry (2.0credits) (計算化学)

Course Type	Specialized Courses	
Class Format	Lecture	
Course Name	Chemistry	Fundamental and Applied Physics
Starts 1	3 Autumn Semester	3 Autumn Semester
Elective/Compulsory	Elective	Compulsory
Lecturer	YANAI Takeshi Professor	

Course Purpose

Computers and computing technologies are becoming increasingly important as a tool to facilitate complex work and expand ones' abilities for carrying out chemical studies. In this class, attendees will learn basics of programming for effectively using computer and write programs in Python language for numerical analysis, chemical calculations, etc.

Prerequisite Subjects

quantum chemistry

Course Topics

1. Python programming Tutorial
2. Numpy Tutorial
3. Graph and plotting: Matplotlib
4. Quantum chemistry calculations
5. Potential energy curves
6. Geometry optimization
7. Plotting of molecular orbitals
8. Problem sets

It is desirable to read a textbook or reference materials before a class

Textbook

There is no designated textbook, but lecture materials will be handed out.

Additional Reading

Python tutorial: <https://docs.python.org/2/tutorial/>

Numpy quick tutorial: <https://docs.scipy.org/doc/numpy/user/quickstart.html>

Matplotlib quick tutorial: <https://matplotlib.org/tutorials/introductory/pyplot.html>

Hartree-Fock theory:

<http://vergil.chemistry.gatech.edu/courses/chem6485/pdf/Hartree-Fock-Intro.pdf>

Scikit-learn tutorials: <http://scikit-learn.org/stable/tutorial/index.html>

Grade Assessment

Attendance and report on programming

"Absent": if 10% of 90min class is absent in class room. "Fail": if final report is not handed in.

Notes

There are no prerequisites

Contacting Faculty

yanait@chem.nagoya-u.ac.jp

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Faculty of Chemistry

Course Purpose

The purpose of this course is to present an overview of cutting-edge organic chemistry, and learn important principles and facets of modern chemistry. The course includes sophisticated catalysts and reagents (organic-based and metal-based) for making useful compounds, designer functional organic molecules with various optoelectronic properties, and synthesis of natural products and biologically active complex molecules.

Prerequisite Subjects

Organic Chemistry 1-5

Course Topics

1. Organocatalysts for Green Chemistry
2. Chiral Catalysts for Enantioselective Synthesis
3. Transition Metal Catalysts for Unreactive Bond Activation
4. Synthesis of Optoelectronic Materials
5. Synthesis of Natural Products and Biologically Active Compounds

It is desirable to read a textbook or reference materials before a class

Textbook

The textbook is not specified.

Additional Reading

Organic Chemistry: Structure and Function 6th ed.
K. Peter C. Vollhardt, Neil E. Schore

Grade Assessment

Grades will be based on reports.

Notes

No registration requirements

Contacting Faculty

Students can communicate with their lecturers during lectures, office hours, or via email.

Biochemistry IV (2.0credits) (生化学 4)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Tsukasa MATSUDA Professor

Course Purpose

This course is aimed at expanding students' knowledge in basics of the gene expression and replication from biochemical aspects, including metabolism, structure and molecular function of DNA, RNA and related proteins.

Prerequisite Subjects

Biochemistry I, II and III Basic knowledge of biology and chemistry Cell Biology I and II, Genetics I and II

Course Topics

Part V "Gene expression and replication" of the text book
1. DNA structure and interaction with proteins
2. DNA synthesis
3. DNA repair and recombination
4. RNA metabolism: transcription and posttranscriptional processing
5. Transfer RNA and ribosomes
6. Translation and posttranslational processing
7. Gene organization and regulation of gene expression
It is desirable to read a textbook or reference materials before a class

Textbook

Principles of Biochemistry International Student Version, Forth edition Voet D, Voet JG, Pratt CW (John Wiley & Sons)
The textbook (or E-Text) will be used every time in the class including a term exam.

Additional Reading

Molecular Biology of the Cell, Alberts B et al. (Taylor & Francis)

Grade Assessment

Evaluation will be based on examinations at the end of course, and answer/report sheets for Checkpoint at every time of the class.
Absent: based on submission of Course Withdrawal Request Form. Fail: based on failure in the examinations & the answer/report sheets

Notes

Biochemistry I, II and III Basic knowledge of biology and chemistry

Contacting Faculty

Cell Biology IV (2.0credits) (細胞学 4)

Course Type	Specialized Courses
Class Format	Lecture
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Elective
Lecturer	Hideki SHIBATA Associate Professor

Course Purpose

This course covers advanced topics in molecular cell biology, including application and methods. Students will learn how research on molecular cell biology is achieved with advanced technology in the particular areas of cancer cells, ion transport, biomedicines, live cell imaging, etc.

Prerequisite Subjects

Cell Biology I, II, and III

Course Topics

(I) Ion channels: Electrophysiology, structure and function(II) Live cell imaging (III) Immunotherapy (IV) ExamIt is desirable to read a textbook or reference materials before a class

Textbook

I do not appoint the textbook

Additional Reading

Essential Cell Biology (4th ed.) Bruce Alberts et al. ; Molecular Biology of the Cell (6th ed.)

Grade Assessment

Evaluation will be based on in-class participation, assignments, and examinations. Absent – based on submission of Course Withdrawal Request Form; Fail – based on “Failed” results of examinations and assignments.

Notes

Basic knowledge on molecular biology

Contacting Faculty

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

In order to utilize the knowledge, qualities and abilities to develop engineering, it is necessary to deepen the understanding of acquired knowledge. In this course, Solid State Chemistry, Structural Chemistry and Electrochemistry, and Quantum Chemistry II are set as backgrounds, and the purpose of this course is to cultivate skills applicable to engineering by solving exercises in these fields.

By the end of this course, students should be able to do the following:

1. Apply the following knowledge to specific problems.
 - Solid State Chemistry
 - Structural Chemistry and Electrochemistry
 - Quantum Chemistry II
2. Acquire the foundation of applied and comprehensive skills required for future professional research.

Prerequisite Subjects

Crystal Chemistry, Inorganic Synthetic Chemistry, Structural Chemistry, Electrochemistry, Quantum Chemistry

Course Topics

1. Solid State Chemistry
2. Structural Chemistry and Electrochemistry
3. Quantum Chemistry II
4. Term-end examination

Except for the term-end examination, students must complete the required assignments before every class.

Textbook

Textbooks are not specified, but the required documents describing the assignments will be distributed during the guidance.

Additional Reading

Textbooks describing the following subjects. Other instructions will be given as needed.

- Solid State Chemistry
- Structural Chemistry and Electrochemistry
- Quantum Chemistry II

Grade Assessment

Your overall grade in the course will be decided based on the following:

- Every assignment and attitude during lectures: 60%
- Term-end examination: 40%

The ability to solve the following problems and have a correct understanding of the basic concepts and terms in these fields will be the criteria for passing the course.

- Solid State Chemistry
- Structural Chemistry and Electrochemistry

- Quantum Chemistry II

Credits will be awarded to those students who score 60 or more out of 100 points. Grades are as follows:

Enrollees after 2020

A+: 100-95A: 94-80B: 79-70C: 69-65C-: 64-60F: 59-0

Enrollees before 2019

S: 100-90A: 89-80B: 79-70C: 69-60F: 59-0

Notes

It is desirable to take the following courses, but you can take this course even if you have not taken them.

Chemistry/Biotechnology Tutorial I, Inorganic Chemistry I, II, Chemistry of Inorganic Materials I, Quantum Chemistry I, II

Contacting Faculty

Professors and teaching assistants will answer the questions.

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	3 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

The purpose of the course is to gain essential knowledge of organic chemistry through classroom discussions and reports. At the end of the course, participants are expected to acquire the foundation of applied and comprehensive skills required for future professional research

Prerequisite Subjects

Basic Chemistry 1,2, Organic Chemistry 1-3

Course Topics

1. Nomenclature of Organic Compounds and Stereochemistry
2. Structure and Reactivity: Acids and Bases, Polar and Nonpolar Molecules
3. Reactions of Alkanes and Cycloalkanes
4. Reactions of Haloalkanes: Nucleophilic Substitution
5. Elimination Reactions
6. Additions to Alkenes and Alkynes
7. Benzene and Aromaticity: Electrophilic Aromatic Substitution
8. Electrophilic Attack on Derivatives of Benzene: Substituents Control Regioselectivity

Textbook

Textbooks are not specified, but the required documents describing the assignments will be distributed during the guidance.

Additional Reading

Organic Chemistry: Structure and Function 6th ed.
K.Peter C. Vollhardt, Neil E. Schore

Grade Assessment

Grades will be evaluated based on participation, reports, and final examination.
Students must obtain a score of 60 or higher to pass the course.

Notes

It is desirable to take the following courses, but you can take this course even if you have not taken them.

Basic Chemistry 1,2, Organic Chemistry 1-3

Contacting Faculty

Professors and teaching assistants will answer your questions.

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	4 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

The purpose of the course is to gain essential knowledge of organic chemistry through classroom discussions and reports. At the end of the course, participants are expected to acquire the foundation of applied and comprehensive skills required for future professional research

Prerequisite Subjects

Organic Chemistry 1-5 and chemistry tutorial 3.

Course Topics

(Topics for students in Applied Chemistry Course)

1. Reactions of Alcohols and the Chemistry of Ethers
2. Aldehydes and Ketones: Additions to Carbonyl Group
3. Enols, Enolates, and the Aldol Condensation
4. Ester Enolates and the Claisen Condensation
5. Carboxylic Acids and Their Derivatives
6. Amines and Their Derivatives: Functional Groups Containing Nitrogen
7. Chemistry of Benzene Substituents: Alkylbenzenes, Phenols, and Anilines
8. Heterocycles: Heteroatoms in Cyclic Organic Compounds
9. Amino Acids, Peptides, Proteins, and Nucleic Acids: Nitrogen-Containing Polymers in Nature
10. Carbohydrates: Polyfunctional Compounds in Nature

Textbook

Textbooks are not specified, but the required documents describing the assignments will be distributed during the guidance.

Additional Reading

Organic Chemistry: Structure and Function 6th ed.

K.Peter C. Vollhardt, Neil E. Schore

Grade Assessment

Grades will be evaluated based on participation, reports, oral exam and/or final examination.

Credits will be awarded to those students who score 60 or more.

Notes

It is desirable to take the following courses, but you can take this course even if you have not taken them.

Organic Chemistry 1-5 and chemistry tutorial 3.

Contacting Faculty

Professors and teaching assistants will answer your questions.

Chemistry and Biotechnology Laboratory 3 (3.0credits) (化学生命工学実験3)

Course Type	Specialized Courses
Class Format	Experiment
Course Name	Chemistry
Starts 1	4 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

This course enhances the development of the student's skill in carrying out organic chemistry and biotechnology experiments. It will help your graduation research in 4th grade (graduation thesis A and B). Through organic chemistry laboratory, you will learn advanced experimental protocols for the synthesis, separation, purification, and identification of organic molecules. Biotechnology laboratory aims to learn advanced experimental procedure.

Prerequisite Subjects

Elemental Chemistry I & II, Organic chemistry 1 ~ 5, Biochemistry 1, chemistry and biotechnology laboratory 2.

Course Topics

* Advanced organic chemistry

1-a. Asymmetric synthesis of phenylalanine using chiral phase transfer catalysts

1-b. Derivatization of citronellal

2-a. Cross-coupling reaction with Grignard reagents

2-b. Chemiluminescence with luminol

3. C-C bond formation with enolate anions

4. Lidocaine as a synthetic drug

5. Synthesis of benzene ring via [2+2+2] cycloisomerization of alkynes with ruthenium catalyst

* Advanced biotechnology

1. Elemental Experiments in Recombinant DNA Technology

2. Purification and Analysis of Protein

3a. Fluorescent DNA probe for detection of INDEL

3b. Microchip electrophoresis-based DNA analysis

4. Mammalian cell culture

Textbook

Use an experimental guideline prepared for each topic. How to obtain the experimental guideline will be announced during the experiment guidance.

Additional Reading

Vollhardt/Schore Organic Chemistry Structure and Function, 6th Ed.; K. P. C. Vollhardt, N. E. Schore

Biochemistry EIGHTH EDITION; J. M. Berg, J. L. Tymoczko, G.J. Gatto, Jr., L. Stryer

Grade Assessment

Grading will be decided based on approach to the experiment (positiveness, activeness), logical thinking / judgment for the results, experimental skills and reports. Credits will be awarded to those students who score 60 or more out of 100 points.

Notes

It is desirable to take prerequisite subjects, but you can take this experiment even if you have not taken them.

Contacting Faculty

Professors and teaching assistants will answer the questions.

Course Type	Specialized Courses
Class Format	Experiment
Course Name	Chemistry
Starts 1	4 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

In order to cultivate academic skills, qualities, and abilities to develop engineering, it is necessary to acquire various advanced experimental knowledge and operations. The aim of this experiment is to acquire advanced experimental knowledge and operations related to inorganic chemistry, physical chemistry, polymer synthesis chemistry, and polymer physical chemistry. It also enhances the development of the ability to organize and analyze data and create reports.

This experiment consists of two parts; Inorganic/Physical Chemistry Experiment and Polymer Chemistry Experiment. By the end of this experiment, students should be able to do the following:

<Inorganic and physical chemistry experiment>

1. Acquiring basic knowledge on firing process, structural analysis and physical property evaluation of ceramics.
2. Understanding the fabrication process of nanosheets based on solution chemistry and the analysis method of nanomaterials.
3. Acquiring basic knowledge of inorganic and complex chemistry and learning characterization techniques relating to complex.
4. Acquiring basic knowledge of inorganic and analytical chemistry through the synthesis and evaluation of hierarchical porous materials.
5. Acquiring basic knowledges to make an experimental plan, to interpret the results, and to explain the achievements through reports and oral presentations.
6. Understanding the electron energy structure of semiconductors/organic dyes and their photoresponsivity.
7. Understanding the basics of programming on Linux OS through computer experiments on proteins.

<Polymer chemistry experiment>

1. Acquire an understanding of synthesis, separation/purification, and characterization of polymer.
2. Acquire an understanding of the safety experimental operation
3. Acquire knowledge regarding preparation of polymer materials and evaluation method of polymer physical phenomena.
4. Design experimental plans, organize and analyze data, and discuss results.
5. Create a logical report.
6. Deepen the understanding of polymer synthesis chemistry and polymer physical chemistry.

Prerequisite Subjects

Chemistry and Biotechnology Laboratory 1 ~ 3, Safety in Laboratory, Elemental Chemistry I & II, Chemical Kinetics with Exercises, Thermodynamics 1 & 2 with Exercises, Structural Chemistry and Electrochemistry with Exercises, Quantum Chemistry 1 & 2 with Exercised, Inorganic Chemistry 1 & 2 with Exercises, Chemistry of Inorganic Reaction, Organic Chemistry 1 ~ 5 with Exercises, Fundamentals of Polymer Chemistry, Synthetic Polymer Chemistry

Course Topics

Advanced experiments on inorganic chemistry, physical chemistry, and polymer chemistry, are carried out, then results of the experiments are discussed and summarized in a report. Presentation is also carried out in inorganic and physical chemistry experiment. Individual experimental topics are as follows.

<Inorganic and physical chemistry experiment>

1. Synthesis and analysis of biomedical ceramics
2. Synthesis and characterization of inorganic nanosheets
3. Syntheses of porous metal complexes, characterization of porous metal complexes
4. Synthesis and characterization of hierarchically porous materials by sol-gel method
5. Catalytic action in hydrogen peroxide decomposition reaction
6. Fabrication and characterization of dye-sensitized solar cell
7. Protein computer experiment guidelines.

<Polymer chemistry experiment>

1. Preparation and Characterization of Thermoplastic Elastomers Correlation between the Long-Chain Molecular Structure and the Physical Properties
2. Radical Copolymerization, Living Radical Polymerization, and Interfacial Polycondensation As Representatives of Chain-Growth Polymerization, Living Polymerization, and Step-Growth Polymerization
3. Contact Angle Goniometry for Surface Tension Measurements of Solid Surfaces Zisman Plot and Surface Treatment Techniques
4. Synthesis of Luminescent Poly(p-phenylenevinylene)-Amylose Composites

Read the experimental guideline before each experiment. In addition, a report task is assigned for each experiment. After organizing, analyzing, and considering the experimental results, submit it as a report by the submission deadline.

Textbook

Use an experimental guideline prepared for each topic. How to obtain the experimental guideline will be announced during the experiment guidance.

Additional Reading

Other instructions will be given as needed.

Grade Assessment

Grading will be decided based on the approach to the experiment (positiveness, activeness), logical thinking / judgment for the results, experimental skills and reports. Credits will be awarded to those students who score 60 or more out of 100 points. By passing both experiments of Inorganic/Physical Chemistry Experiment and Polymer Chemistry Experiment, you can earn the credits for this experiment.

Grades are as follows:

Enrollees after 2020

A+: 100-95A: 94-80B: 79-70C: 69-65C-: 64-60F: 59-0

Enrollees before 2019

S: 100-90A: 89-80B: 79-70C: 69-60F: 59-0

Notes

Except for transfer students and G30 students, students must have earned credit for "Safety in Laboratory." It is desirable to take other background courses, but you can take this experiment even if you have not taken them.

Contacting Faculty

Professors and teaching assistants will answer the questions.

Advanced Chemistry Tutorial A (1.0credits) (特別演習 A)

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	4 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

In the tutorial lessons, we will perform the reading and discussions on the reference books (English) in conjunction with the chemistry and biochemistry. We will feed the basics about chemistry and biochemistry in English, and discuss a research theme deeply. We will feed application ability, a process of the study, and a way of thinking about the inventions.

Prerequisite Subjects

All classes on chemistry and biochemistry

Course Topics

Textbooks and papers will be suggested in each research group: Gene Engineering and Molecular Biology, Bioprocess Engineering, Environmental Biotechnology, Catalysis in Organic Synthesis, Biopolymer Chemistry, Structural Biotechnology, Cell and Molecular Bioengineering, Theoretical and Computational Chemistry, Physical Chemistry of Polymers, Organic Material Chemistry, Organic Synthesis, Organic Chemistry of Macromolecules, Organic Reactions, Inorganic Material Chemistry, Applied Analytical Chemistry, Bioanalytical Chemistry, EcoNano Materials Science, Function Design Chemistry, Organic Conversion Chemistry, Chemistry of Inorganic Reactions, Crystalline State Chemistry, Material Design Chemistry, Functional Materials Engineering, Division of Environmental Research, Division of Energy Science Research, Molecular Design

Textbook

Textbooks and papers will be suggested in each research group.

Additional Reading

Students will be suggested some references.

Grade Assessment

Depends on research groups. In general, oral examinations and/or reports for the basic knowledge on each research field.

Notes

No course requirements

Contacting Faculty

Ask to the corresponding Professors in each research group.

Advanced Chemistry Tutorial B (1.0credits) (特別演習 B)

Course Type	Specialized Courses
Class Format	Exercise
Course Name	Chemistry
Starts 1	4 Spring Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

In the tutorial lessons, we will perform the reading and discussions on the reference books (English) in conjunction with the chemistry and biochemistry. We will feed the basics about chemistry and biochemistry in English, and discuss a research theme deeply. We will feed application ability, a process of the study, and a way of thinking about the inventions.

Prerequisite Subjects

All classes on chemistry and biochemistry

Course Topics

Textbooks and papers will be suggested in each research group: Gene Engineering and Molecular Biology, Bioprocess Engineering, Environmental Biotechnology, Catalysis in Organic Synthesis, Biopolymer Chemistry, Structural Biotechnology, Cell and Molecular Bioengineering, Theoretical and Computational Chemistry, Physical Chemistry of Polymers, Organic Material Chemistry, Organic Synthesis, Organic Chemistry of Macromolecules, Organic Reactions, Inorganic Material Chemistry, Applied Analytical Chemistry, Bioanalytical Chemistry, EcoNano Materials Science, Function Design Chemistry, Organic Conversion Chemistry, Chemistry of Inorganic Reactions, Crystalline State Chemistry, Material Design Chemistry, Functional Materials Engineering, Division of Environmental Research, Division of Energy Science Research, Molecular Design

Textbook

Textbooks and papers will be suggested in each research group.

Additional Reading

Students will be suggested some references.

Grade Assessment

Grades will be based on research activities in the laboratory. Minimum requirement is 60/100.

Notes

No course requirements

Contacting Faculty

Ask to the corresponding Professors in each research group.

Graduation Research A (5.0credits) (卒業研究A)

Course Type	Specialized Courses
Class Format	Experiment and Exercise
Course Name	Chemistry
Starts 1	4 Autumn Semester
Elective/Compulsory	Compulsory
Lecturer	Faculty of Chemistry

Course Purpose

Through graduation research in each group, cultivate creativity and comprehensive ability as a researcher in the fields of chemistry and biochemistry.

Achievement target

1. Acquire basic knowledge including safe experimental methods in the fields of chemistry and biochemistry.
2. Understand how to conduct research using the knowledge of the courses, theoretical thinking, how to write dissertations, oral presentations, etc., and develop creativity and comprehensive ability as a researcher.

Prerequisite Subjects

Undergraduate specialized classes

Course Topics

Outline of Engineering III (2.0credits) (工学概論第3)

Course Type	Related Specialized Courses		
Class Format	Lecture		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
Starts 1	Automotive Engineering 3 Autumn Semester 4 Autumn Semester	4 Autumn Semester	4 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	Emanuel LELEITO Lecturer	Gang ZENG Lecturer	Kiyohisa NISHIYAMA Lecturer

Course Purpose

This course introduces the history, the current state and future prospects of R&D (research and development) in various sectors related to the field of engineering in Japan. This class consists of “omnibus-style” lectures, all provided in English.

What you will get tips in this lecture for:

- Communication across different engineering fields
- Communication across language barriers (English/Japanese)
- Search skills for locating professional topics and information
- Presentation skills

Reports and presentations, which require students to independently search necessary information, will be assigned in the lectures. The students should note that these reports are used for evaluation.

Prerequisite Subjects

This lecture does not require any background subject. Fundamental knowledge will be clearly instructed.

Course Topics

1. Science, Technology and Innovations in Embedded Computing Systems (Gang ZENG)
 - This lecture gives an overview of the embedded computing systems related technologies in Japan. In particular, the latest innovations on the low-energy and automotive applications will be introduced.
 - The students are asked to participate in group discussion to share their ideas and thoughts about energy conservation and future automobiles.
 2. The innovative factors of technologies in Japan (Kiyohisa NISHIYAMA)
 - This lecture provides the participants with the concept of 40 innovation principles. Some Japanese technologies are broken down into the combination of the principles as examples.
 - The students each are asked to analyse a technology of interest found in Japan. The students will be able to grab the concepts of any technological innovations after completing this lecture.
 3. Science, Technology and Innovation for Disaster Risk Reduction (Emanuel LELEITO)
 - This lecture gives students an overview of the Scientific and Technology Innovations that have contributed to Japan’s leading role in Disaster Risk Reduction (DRR).
 - DRR related discussions and presentation in class will help students exercise their creative thinking and problem solving skills.
- 3.3 Current Problems and Future of Mass Production

Textbook

Lecture materials will be distributed during at each lecture.

Additional Reading

Lecture materials will be distributed during at each lecture.

Grade Assessment

Credits will be awarded to those students who score over 60 out of 100, based on the evaluation on reports(60%) and final presentation(40%).

Notes

The students are required to actively join group discussions, reports and presentations.

Contacting Faculty

Questions are received during or after class time.

Course Type	Related Specialized Courses		
Class Format	Lecture		
Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
Starts 1	Automotive Engineering 3 Autumn Semester 4 Autumn Semester	4 Autumn Semester	4 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	Associated Faculty	Associated Faculty	Associated Faculty

Course Purpose

This course discusses the fundamentals of, and current topics in each field of the advanced electrical, electronic and information engineering, with an overview of the status of their researches and developments in Japan. Topics to be introduced are those related with energy, material and device, information and communication, multimedia and so on.

Students will be familiar with the most advanced technologies in the above subject matter.

Prerequisite Subjects

Physics, Electromagnetics, Mathematics

Course Topics

This course consists of two parts:

1. Six lectures in the classroom which will be given by faculty members.
2. Tours to three laboratories of companies and/or research organizations.

These six lectures are divided three pairs of lectures and each pair is on one of Electrical Engineering, Electronics, and Information and Communication Engineering. Each lecture covers from the fundamental to the cutting-edge topics of the research area of the faculty member responsible to it.

During three tours, students will visit laboratories on energy generation and novel materials.

Submission of a report after each lecture and tour is mandatory.

Textbook

Some books will be introduced in the lecture.

Additional Reading

Some books will be introduced in the lecture.

Grade Assessment

Submission of a report after each lecture and tour is mandatory. A knowledge of lectured advanced technologies in electrical, electronic and information engineering is evaluated by the reports. The final score is determined based on scores of these reports. Students must obtain a score of 60 or higher out of 100 to pass the course.

Notes

Although the time slots assigned to this course are 3rd period (13:00-14:30) and 4th period (14:45-16:15), the tours may take longer time and finish after 16:15.

Students must attend all lectures and join all tours. If there is a student who missed a tour without notice, it compromises the reputation of Nagoya university.

Contacting Faculty

Students are encouraged to ask questions during and after lectures.

Faculty members can also be contacted at their offices, as well as by phone or email.

Course Type	Related Specialized Courses

Course Name	Chemistry	Fundamental and Applied Physics	Automotive Engineering
Starts 1	Automotive Engineering 3 Autumn Semester 4 Autumn Semester	4 Autumn Semester	4 Autumn Semester
Elective/Compulsory	Elective Elective	Elective	Elective
Lecturer	Associated Faculty	Associated Faculty	

Course Purpose

The objectives of this course are (1) to establish scenarios for certain social infrastructure projects, and thereby introduce relevant civil engineering theories and construction technology, as well as conduct site-visits; (2) to survey, through technical site visits, various aspects of urban and architectural studies, including building material experiments, energy conservation, and the recent development of regional disaster mitigation activities. After completing this course, students will be able to: 1. Understand civil engineering theories and construction technology. 2. Understand urban and architectural studies.

Prerequisite Subjects

As the objective of this class is to understand fundamentals of civil engineering and architecture, no background class is assigned.

Course Topics

Lecture and Site-visit 1: Preservation of Historical Area
Lecture and Site-visit 2: Architecture and culture
Lecture and Site-visit 3: Nagoya University Disaster Mitigation Research Center
Lecture 4: Social infrastructure and civil engineering (1) Expressway Development in Japan
Lecture 5: Social infrastructure and civil engineering (2) Maintenance and Operation of Expressway
Site-visit 6: Maintenance and Operation of Expressway
Site-visit 7: Traffic Control Center of Expressway
Reports will be assigned in each lecture.

Textbook

Directed as needed.

Additional Reading

Directed as needed.

Grade Assessment

Students will be evaluated on written reports. To pass, students must understand the fundamentals of civil engineering theories and construction technology, and urban and architectural studies.

Notes

Not required
