

| | |
|--------------------|-----------------------------|
| Course Type | Basic Courses |
| Division at course | Master's Course |
| Class Format | Lecture |
| Course Name | Automotive Engineering |
| Starts 1 | 1 Autumn Semester |
| Lecturer | Tsuyoshi INOUE Professor |

Course Purpose

In this Advanced lecture, students will learn the fundamental and applied subjects of the dynamical system. Particle system, planar rigid multibody system with constraints will be described. Moreover, the analytical techniques, concepts in the dynamical analysis for these systems will be described. The goal of this lecture is to be able to do the following: 1. Model the mechanical system and explain its dynamical characteristics 2. Build a planar multibody dynamics model of a mechanical structure 3. Perform numerical analysis of its motion

Prerequisite Subjects

Mathematics I,II with Exercises, Mechanics I,II with Exercise, Dynamical System Theory, Numerical Analysis Vibration I,II with Exercise

Course Topics

1. Dynamics of a particle and multi degree of freedom system (Linear and Nonlinear system) 2. Basic analytical concept of Pendulum: Fixed point and its stability 3. Dynamics of a Pendulum in phase space 4. Advanced analytical concept: Analysis using first integral 5. Advanced analytical concept: Manifolds 6. Bifurcation in the dynamics of Pendulum 7. Map: fixed point and its stability 8. Bifurcation in map 9. Logistic map and period doubling bifurcation 10. Introduction to dynamics of a rigid body: Planer multibody dynamics 11. Planer multibody dynamics: Pin joint constraint 12. Planer multibody dynamics: Slider joint constraint 13. Exercise of Planer multibody dynamics modeling (Holonomic constraint) 14. Introduction to flexible multibody dynamics 15. flexible multibody dynamics: floating frame method After the lecture, students are required to solve examples of the handouts and report assignments

Textbook

Printed material will be distributed, or download page will be prepared.

Additional Reading

Analytical Dynamics, Haim Baruh Applied Nonlinear Dynamics, A.H. Nayfeh Dynamics of Multibody Systems A.A. Shabana

Grade Assessment

Evaluate based on the attendance rate and short report at each time (60%) and Reports at the end of each part (2-3 times) (40%). Students must obtain a score of 60 or higher to pass the course.

Notes

- No extra requirements are imposed. - The classes will be given in face-to-face way and remote way through Zoom.

Contacting Faculty

Students can ask questions at any time during classes. Questions during off-class hours can be asked at the lecturers' rooms or * Prof. Tsuyoshi Inoue E-mail: inoue.tsuyoshi(at)nagoya-u.jp

| | | |
|--------------------|-----------------------------------|------------------------|
| Course Type | Basic Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Automotive Engineering | Automotive Engineering |
| Starts 1 | 1 Autumn Semester | 1 Autumn Semester |
| Lecturer | Faculty of Automotive Engineering | |

Course Purpose

In this course, students will learn about recent advances in automotive engineering.

Course objectives include the following.

- (1) Developing understandings of automated driving systems and improvement of internal combustion engines
- (2) Reviewing revolutionary enabling technologies for direct injection gasoline engines and other combustion system engines

Prerequisite Subjects

Thermodynamics and Fluid Mechanics are preferable, but not prerequisite.

Course Topics

1. Introduction of Automated Driving Systems
 - 1.1. Overview and History of Automated Driving Systems
 - 1.2. Technologies and Examples of Automated Driving Systems
 - 1.3. Challenges in Automated Driving Systems
2. Evaluation of Vehicle Propulsion Systems
 - 2.1. Codes and Regulations for Automobiles
 - 2.2. Trends in Evaluation Methods of Automobiles
 - 2.3. Life Cycle Assessment for Vehicle Propulsion Systems
3. Improvement of Internal Combustion Engines
 - 3.1. Improving Methods of Thermal Efficiency
 - 3.2. Introduction of Direct Injection Gasoline/Gas Engines
 - 3.3. Perspectives on Various Types of Combustion Systems

No preparation is required.

Textbook

Printed handouts will be provided.

Additional Reading

Not required but the book below is recommendable.

Internal Combustion Engine Fundamentals, 2nd Edition 2018, McGraw-Hill, John B Heywood

Grade Assessment

Grades will be based on class participation and reports.

- 30% for attendance
- 30% for interim report
- 40% for final report

The total score above equal to or higher than 60% out of 100% will pass.

Notes

No requirements for taking this class.

Contacting Faculty

Students can ask questions to the lecturer at any time during classes.

Automotive Engineering Seminar 1A (2.0credits) (自動車工学セミナー1A)

| | | |
|--------------------|-----------------------------------|------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Seminar | |
| Course Name | Automotive Engineering | Automotive Engineering |
| Starts 1 | 1 Autumn Semester | 1 Autumn Semester |
| Lecturer | Faculty of Automotive Engineering | |

Course Purpose

The aim of this course is to help students acquire deep understanding of the fundamental science and engineering related to automobiles.

Prerequisite Subjects

All courses in undergraduate course.

Course Topics

This seminar deals with the basis of fundamental science and engineering related to automobiles.

Textbook

Textbooks may be provided by the supervisor.

Additional Reading

Will be introduced in the class as needed.

Grade Assessment

Grading will be decided based on attendance and the quality of the students' contribution to the seminar.

Notes

No requirements for taking this class.

Contacting Faculty

Students can contact their supervisor.

Automotive Engineering Seminar 1B (2.0credits) (自動車工学セミナー1B)

Advanced Thermal Engineering (2.0credits) (熱工学特論)

| | | |
|--------------------|-----------------------------------|------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Mechanical Systems Engineering | Automotive Engineering |
| Starts 1 | Spring Semester ,every other year | 1 Spring Semester |
| Lecturer | Hosei NAGANO Professor | |

Course Purpose

-To understand how to utilize knowledge of heat transfer in real world, and think about their purposes (thermal management, serious energy problem, and global warming) -To understand the importance of thermal management.-To understand about trend of research and development for thermal & energy management in engineering field.

Prerequisite Subjects

Thermodynamics, Heat Transfer Engineering

Course Topics

Lectures, presentations and discussions on; 1. Fundamentals of heat transfer2. Application of thermodynamics and heat transfer3. Trend of research and development for thermal & energy management in engineering field.

Textbook

Prints

Additional Reading

References will be introduced upon on your requests.

Grade Assessment

Based on reports, presentations, and discussions S(>90), A(>=80), B(>=70), C(>=60), F(<60).

Notes

- No special requirements are imposed.- Each lecture is given by normal in-person style or online (Zoom).

| | | |
|--------------------|-------------------------------------|------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Mechanical Systems Engineering | Automotive Engineering |
| Starts 1 | Spring Semester ,every other year | 1 Spring Semester |
| Lecturer | ShogoOKAMOTO Associate Professor | |

Course Purpose

Substantial difficulties of dynamic systems in the real world lie in the involvement of a large number of related factors that deviate statistically. Multivariate analyses and statistics are common tools for understanding and modeling these intricate systems. This course is arranged for those who had few opportunities to study statistics, multivariate analyses, and some basis for these mathematics. We learn intermediate topics of classic multivariate analyses and related statistics. We also practice the methods of multivariate analysis on real data and interpret the results throughout the course.

Prerequisite Subjects

Mathematics, especially, linear algebra and statistics of undergraduate level.

Course Topics

- 1-2 h: Multivariate regression analysis
- 3 h: Outlier analysis
- 4-5 h: Principal component analysis
- 6 h: Factor analysis
- 7-8 h: Discrimination analysis
- 9-10 h: Structural equation modeling
- 11 h: Covariance selection
- 12 h: Time-series analysis
- 13 h: Preparation of final presentation
- 14 h: Youtube presentation and marking by all students
- 15 h: Honorable presentations by selected speakers

Textbook

Available on the course website:

http://www.mech.nagoya-u.ac.jp/asi/ja/lecture/okamoto_system.html

Additional Reading

Provided through NUCT.

Grade Assessment

Three reports (60%) and one presentation (40%) are collectively evaluated. All or selected students have to prepare for the final presentation, for which real world data are examined with one of the analysis methods.

Notes

The lectures will be delivered on Youtube. The URLs will be announced every week by e-mails registered in NUCT. Final presentations will be held by Microsoft Teams.

Contacting Faculty

Any time by e-mails.

Advanced Lectures on Strength and Fracture of Materials (2.0credits) (材料強度学特論)

| | | |
|--------------------|-----------------------------------|-----------------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Mechanical Systems Engineering | Automotive Engineering |
| Starts 1 | Spring Semester ,every other year | Spring Semester ,every other year |
| Lecturer | Dai OKUMURA Professor | |

Course Purpose

In this course, the fundamentals of nonlinear solid mechanics will be lectured.

The aims of this course:

1. Study tensor analysis
2. Study deformation
3. Study stress and balance principles
4. Study constitutive material models

Prerequisite Subjects

Mechanics of Materials, Solid mechanics, Continuum mechanics

Course Topics

1. Tensor analysis, 2. Deformation, 3. Stress, 4. Balance principles, 5. Constitutive material models

Read the part of the textbook before each class. After the class, solve the examples and end-of-chapter problems. Submit reports on request.

Textbook

Non-linear Elastic Deformations, R.W. Ogden, Dover.

Additional Reading

Nonlinear Solid Mechanics, G.A. Holzapfel, Wiley.

Grade Assessment

The scores of the report assignments given at the end of each lecture will be aggregated and evaluated. A maximum of 100 points and 60 points or more will be passed.

Notes

No registration requirements

Contacting Faculty

After classes

Prof. Dai Okumura (dai.okumura@mae.nagoya-u.ac.jp)

| | | |
|--------------------|--------------------------------|------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Automotive Engineering | Automotive Engineering |
| Starts 1 | 1 Autumn Semester | 1 Autumn Semester |
| Lecturer | Toshiro MATSUMOTO Professor | |

Course Purpose

The finite element method (FEM) is widely used in various engineering problems, and the students study the advanced physical modelling of the phenomena, constructing the corresponding mathematical models, advanced computational algorithms of FEM, and how to develop the computer code.

The lecture is based on the handouts and the students are going to cope with the assignments for formulating FEM and example numerical demonstrations.

By finishing this class, the students are targeted to have the capability of doing the following skills:

1. Developing the advanced physical model
2. Developing the advanced mathematical model corresponding to the above derived physical model
3. Formulation of the multi-dimensional finite element method
4. Developing and using a finite element code

Prerequisite Subjects

Mathematics I, II (Calculus, Linear Algebra), Vector Analysis, Elasticity

Course Topics

1. Vector, tensor, index notation
2. Formula of integration by parts
3. Cauchy's formula and stress tensor
4. Balance of force and moment, derivation of equilibrium equation and symmetry of stress tensor
5. Strain tensor
6. Generalized Hooke's law
7. Navier's equation
8. Virtual work principle
9. Weighted-residual form and weak form
10. Discretization of weak form and introduction of shape functions
11. Expression of weight-function (virtual displacement) with shape function
12. Derivation of stiffness matrix and equivalent nodal force vector by means of element integration
13. Computation algorithm of finite element method
14. Numerical examples through actual finite element code

Assignments are given regarding the lecture topics.

Textbook

Handouts are delivered and other documents are put on Web and downloaded.

Additional Reading

Introduction to Approximate Solution Techniques, Numerical Modeling, and Finite Element Methods, Marcel Dekker Inc

Grade Assessment

The understanding of the theory and computation algorithm of FEM is evaluated through assignments and achievement test. Students can pass when the basic formulation of the weak-form of finite element method and its corresponding computational algorithm are understood. The grade is evaluated accordingly when they can formulate the finite element method for more complicated problem and can develop a finite element computer code.

Notes

- No extra requirements are imposed.
- The classes will be given in face-to-face way and remote way through Zoom.

Contacting Faculty

Students can ask questions at any time during classes.

Questions during off-class hours can be asked at the lecturers' rooms:

Room 323, Engineering Building No.2 North Wing 3F, (2780), E-mail: t.matsumoto@nuem.nagoya-u.ac.jp

| Lecturer | Masaaki KATAYAMA Professor | Takaya YAMAZATO Professor | Keita Takahashi Associate Professor |

Course Purpose

In this course, students are to study wireless communication and image processing technologies which are fundamental to automotive engineering. The goal of this course is as follows.- To understand the basic of wireless communication technology and to apply it for the problems in automotive engineering.- To understand the basic of image processing technology and to apply it for the problems in automotive engineering.

Prerequisite Subjects

Digital Circuit and Exercise, Digital Signal Processing, Programming and Exercise, Information Theory, Wireless Communication System

Course Topics

- Basics of wireless LAN- Experimental practice on wireless LAN - Basics of image signal processing- Programming exercises on image signal processing Students are expected to study the specified material in advance to the class. Students are also expected to complete the exercises before the next class.

Textbook

Books and papers will be introduced during the classes when necessary.

Additional Reading

Books and papers will be introduced during the classes when necessary.

Grade Assessment

The achievement is evaluated by presentations during the classes and reports.

Notes

No prerequisite.

Questions are attended during and after the classes. keita.takahashi<#>nagoya-u.jp Replace <#> with an "at sign".

Industrial Uses of Radiation (2.0credits) (工業における放射線利用)

| | | |
|--------------------|-------------------------|------------------------|
| Course Type | Specialized Courses | |
| Division at course | Master's Course | |
| Class Format | Lecture | |
| Course Name | Automotive Engineering | Automotive Engineering |
| Starts 1 | 1 Spring Semester | 1 Spring Semester |
| Lecturer | Akira URITANI Professor | |

Course Purpose

In this course, students study ionizing radiations, activity, radiation detections, and so on. Students will also study how ionizing radiations are used as powerful tools in manufacturing industries. By taking this course, students will gain a deep knowledge of the reality and importance of the use of radiation in industry.

Prerequisite Subjects

This is a general lecture, so no background subjects are specified.

Course Topics

Radioactivity and ionizing radiation

Environmental radiation

Generation of ionizing radiation, nuclear reactions, accelerators

Radiography(X-rays, neutrons)

Radiation detection and measurement

Utilization of ionizing radiations in manufacturing industries

Lab tours (Visiting candidates: National Institute on Nuclear Fusion, Accelerator Facility in the Higashiyama Campus, Aichi Synchrotron Center, Hamaoka Nuclear Power Station, etc. Travel expenses will be supported by Nagoya University for G30 students.)

Reports and pre-study assignments will be provided for each class and tour.

Textbook

There are no specific textbooks, but materials will be distributed as needed.

Additional Reading

There is no specific reference book, but materials will be distributed as needed.

Grade Assessment

Grades will be assigned based on reports.

If you generally understand the lectures and the contents of the tour, you will pass this lecture. If you can acquire more advanced knowledge, I reflect it in your grades accordingly.

Grade points

100-95A+

94-80A

79-70B

69-65C

64-60C-

under59F

Notes

This lecture will not be held in 2021 because it will be difficult to tour the facility due to the influence of COVID 19.

Contacting Faculty

I can respond at any time during and after class. If you come to my office (Room 451, Eng. Bldg. #5), make an appointment by e-mail in advance.

Advanced Experiments and Exercises in Automotive Engineering A (1.0credits) (自動車工学特別実験及び演習A)

| | | |

| | 1 Spring Semester | 1 Spring Semester | 1 Spring Semester |
| | 1 Spring Semester | 1 Spring Semester | 1 Spring Semester |
| | 1 Spring Semester | | |
| Lecturer | Yasuhiko SAKAI Designated Professor | | |

Course Purpose

This course is intended to study the latest advanced technology of automobile engineering from top researchers of universities and industries. The topics of lectures are related to almost all fields of automotive industries, such as hybrid cars, electric cars, automated driving and crash safety. It is also intended to develop the English hearing/speaking ability. The attainment targets are as follows:

1. Understand the latest technology of automotive engineering.
2. Understand company's automotive production system.
3. Improve English ability in the field of science and engineering.
4. Strengthen communication skills and presentation skills in English by studying with international students.

Prerequisite Subjects

lectures related to fundamental physics, mechanical, electrical and information engineering.

Course Topics

A. Lectures

1. The Car Industry, Market Trend, Circumstance and Its Future.
2. Overview of Automotive Development Process.
3. Observation and Evaluation of Drivers' Behavior Perspective.
4. Car Materials and Processing.
5. Movements and Control of a Car.
6. Safety Engineering for the Prevention of Accidents.
7. Crash Safety.
8. Automobile Embedded Computing System.
9. Wireless Technologies in ITS.

- 10.Applications of CAE to Vehicle Development.
- 11.Energy Saving Technology for Automobiles.
- 12.Automated Driving.
- 13.Traffic Flow Characteristics.
- 14.Cars and Roads in Urban Transportation Context.
- 15.Automobile in Aging Society.

B. Factory Visits

- 1.Toyota Motors Corp., 2. Mitsubishi Motors Corp., 3. Toyota Boshoku Corp., 4.Suzuki Museum,
- 5.Toyota Commemorative Museum, 6. Traffic Safety and Environmental Lab.

C. Group Research Project

Several students form one group and each group selects one topic. They investigate and discuss about this topic and make presentations.

After each lecture is finished, read the handout and write a report about each lecture with your comments.

Textbook

Handout delivered in each lecture

Additional Reading

Introduced in the lectures

Grade Assessment

Evaluation will be based on (a) Discussions in the lectures 20%, (b) report for each lecture 20%, (c) group presentation 30%. and (d) report on research subject 30%. It is necessary to attend factory visits. In each item, the understanding of the concepts is especially evaluated.

Summing up the all scores from (a) to (d) and the students with evaluation A, B, or C can pass this subject.

Notes

1. There are limits of enrollment capacity. Full course student limit is about 10. Auditor limit for each lecture is about 10.
2. English ability is checked before accepted as a student.

Contacting Faculty

Mainly accepted during each lecture. Other general questions are accepted by Professor Yukio Ishida.

<Contact> TEL: 052-747-6797, Email: ishida@nuem.nagoya-u.ac.jp

| Lecturer | ReikoFURUYA Associate Professor | | |

Course Purpose

Students will learn presentation skills for academic purposes, which may include giving academic presentations.

Japanese students are expected to present in English and international students in Japanese in the seventh or eighth class meeting.

By taking this class, students are expected to be able to do the following:

- Give a solid presentation with confidence and without hesitation
- Grasp the characteristics of successful presentations
- Use techniques learned in class in their own presentation

Prerequisite Subjects

English language classes for Japanese students

Japanese language classes for international students

Course Topics

- (1) Ways to convey messages in presentation
- (2) The language of a presentation
- (3) Tips for making effective slides
- (4) Observation and analysis of video-taped presentation by a past student
- (5) Paper vs presentation
- (6) Preparation for individual presentation

(7) Individual presentations I

(8) Individual presentations

This course requires students to work outside of the classes for individual presentation.

Textbook

Handouts will be distributed in class

Additional Reading

1The Japan Times

2:

Grade Assessment

Individual presentation: 50%

Active class participation: 50%

Grades: A+: 100%-95%, A: 94%-80%, B: 79%-70%, C: 69%-65%, C-: 64%-60%, F: 59%-0%

Grading will be decided based on the ability to give an effective academic presentation.

Notes

There are no requirements for taking this class.

Contacting Faculty

Questions will be answered before class, in class, after class or by e-mail.

| Course Name | Automotive Engineering | Automotive Engineering |
| Starts 1 | 1 Spring and Autumn Semester | 1 Spring and Autumn Semester |
| Lecturer | Faculty of Automotive Engineering | |

Course Purpose

The aim is to expand the ability as a researcher by conducting thesis research at different laboratories.

Prerequisite Subjects

All courses in undergraduate course.

Course Topics

Conducting thesis research at different laboratories. U2, U3; short term basic research, U4, U6, U8; long term advanced research

Textbook

None in particular

Additional Reading

None in particular

Grade Assessment

Credits will be awarded to those students who score 'Pass'. Thesis supervisor will make overall evaluation based on 1) credit hours, 2) research report and 3) evaluation by the host researcher.

Notes

No other specific requirements

Contacting Faculty

Students can contact their supervisor.

| Lecturer | Part-time Faculty | | |

Course Purpose

This is a course to acquire basic skills to summarize research as a paper in English. By the end of the course, students will be able to ...

- explain the basic structure of science and technology research paper
- list essential components of each section of research paper
- type short multiple-paragraph essays with appropriate punctuation
- orally express logically structured opinion

Prerequisite Subjects

Various subjects relating to English

Course Topics

1. Basics of academic writing in English (1)
2. Basic structure of science & technology research paper (1)
3. Writing (1), feedback and opinion exchange
4. Basics of academic writing in English (2)
5. Basic structure of science & technology research paper (2)
6. Writing (2), feedback and opinion exchange
7. Basic structure of science & technology research paper (3)
8. Writing (3), feedback and opinion exchange

Students are expected to spend a few hours each week reviewing key points of the lecture and working on the writing assignment.

Textbook

None. Students will receive handouts in each class session.

Additional Reading

Glasman-Deal, H. (2010). Science Research Writing For Non-Native Speakers of English. Imperial College Press.

Swales, J.M. & Feak, C.B. (2012). Academic Writing for Graduate Students. The University of Michigan Press.

Wallwork, A. (2013). English for Academic Research: Grammar, Usage and Style. Springer.

Wallwork, A. (2016). English for Writing Research Papers. Springer.

Grade Assessment

Submitting three short writing assignments that show understanding of research paper structure with appropriate punctuation is required for a passing grade. Speaking English contributing to discussion and opinion exchange, as well as raising questions in class, is strongly encouraged.

Notes

There are no prerequisites.
