Introduction to Engineering Physics (2.0credits) (物理工学のすすめ)

Course Type	Basic Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	Materials Physics
Starts 1	1 Spring Semester	1 Spring Semester
Lecturer	Associated Faculty	Associated Faculty

●Course Purpose

The purpose of this course is to enable students to understand the research activities in the research groups of the Department of Applied Physics and the Department of Materials Science, as well as to gain knowledge about the state-of-the-art studies and related fundamental matters.

In this course, students are expected to
understand the fundamentals and significance of physical science and engineering
become acquainted with the latest research trends in physical science and engineering, and the basic concepts, ideas, and terminology of the field

●Prerequisite Subjects

it is desired to have have basic knowledge of physics such as mechanics, electromagnetism, statistical mechanics, and quantum mechanics.

●Course Topics

(1)Research contents of Department of Applied Physics and related basic contents
(2)Research contents of Department of Materials Science and related basic contents

Submition of the reports are required. In addition, the keywords related to the research activities of each research group should be surveyed prior to the class.

●Textbook

There is no specific text book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Additional Reading

There is no specific reference book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Grade Assessment

(Evaluation method)Evaluate the level of achievement for the target based on the submitted report.

(Evaluation criteria)
Understanding and explaining the basic concepts and terms related to the field of physical engineering.

●Notes

Classes will be conducted face-to-face, remotely, or a combination of the two, depending on the situation. Details will be announced via NUCT. Questions to the instructor should be directed to the NUCT "Message" function. The exchange of opinions among students regarding the class should be conducted through the NUCT function "Message".

●Contacting Faculty

Questions are welcome after each lecture. It is recommended to contact the lecturer in advance by e-mail.
e-mail address: kurosawa@mp.pse.nagoya-u.ac.jp

g and Discussion on Applied Physics（Solid State Engineering） A (2.0credits) (応用物理学特別輪講（物性基礎工

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study the physical phenomena in condensed matter physics from a microscopic point of view, students read suitable textbooks and learn theoretical methods on electronic properties (magnetism, semiconductors, superconductors), cold atomic systems (Bose-Einstein condensation, Fermi superfluids), and topological materials.

Purposes:

1. Students are able to perform calculations on theoretical problems on quantum many-body problems.
2. Students understand and can explain several phenomena of electron properties in solids, and superconductivity/superfluidity.

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4

●Course Topics

Read a textbook on recent topics of superconductivity, superfluidity and topological materials. Students read the textbook before the class and give a presentation. All students should read the textbook before the class and actively join the discussion.

●Textbook

Textbooks will be selected at the beginning of the semester.

●Additional Reading

"superconductivity", J. B. Ketterson and S. N, Song, Cambridge University Press

●Grade Assessment

Oral presentations and discussions.

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical mechanics, and mathematics for physics is required.

●Contacting Faculty

At each seminar.

g and Discussion on Applied Physics（Solid State Engineering） B (2.0credits) (応用物理学特別輪講（物性基礎工

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Autumn Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study the physical phenomena in condensed matter physics from a microscopic point of view, students read suitable textbooks and learn theoretical methods on electronic properties (magnetism, semiconductors, superconductors), cold atomic systems (Bose-Einstein condensation, Fermi superfluids), and topological materials.
Purposes:
1. Students are able to perform calculations on theoretical problems on quantum many-body problems.
2. Students understand and can explain several phenomena of electron properties in solids, and superconductivity/superfluidity.

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4, Reading and Discussion on Applied Physics (Solid State Engineering) A, Seminar on Solid State Engineering 1A

●Course Topics

Read a textbook on recent topics of superconductivity, superfluidity and topological materials. Students read the textbook before the class and give a presentation. All students should read the textbook before the class and actively join the discussion.

●Textbook

Textbooks will be selected at the beginning of the semester.

●Additional Reading

"superconductivity", J. B. Ketterson and S. N, Song, Cambridge University Press

●Grade Assessment

Oral presentations and discussions.

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical mechanics, and mathematics for physics is required.

●Contacting Faculty

d Discussion on Applied Physics （Optical Science and Engineering）A (2.0credits) (応用物理学特別輪講（光物

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Hideo KISHIDA Professor	Takeshi KOYAMA Associate Professor	Yuto NAKAMURA Assistant Professor

●Course Purpose

Students read and explain the content of a text on condensed matter physics to acquire fundamentals for understanding on frontier researches. They make discussions throughout the class and communicate with each other based on the physical thinking to acquire applied skills for their own researches.

●Prerequisite Subjects

1. Quantum Mechanics
2. Solid State Physics

●Course Topics

Explanation on the content of the text in turn, and discussion. Preparation of the explanation before the class.

●Textbook

We choose a text at the beginning of a new fiscal year.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Explanation on the content of the text and discussion. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

Students can ask questions in and after the class. Otherwise, contact the instructors.

scussion on Applied Physics （Quantum Physics in Condensed Matter）A (2.0credits) (応用物理学特別輪講（量

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Taishi TAKENOBU Professor	Hiroshi ITO Associate Professor	Hisaaki TANAKA Assistant Professor
	PU Jiang Assistant Professor		

●Course Purpose

Through seminars on original papers or monographs of pi-electron materials, such as organic molecules, nano-carbon materials, and atomically thin materials, students learn attitudes against academic research; the basics for research techniques and application to specific problems.Through these activities, students acquire creativity and overall ability for solving specific problems.

●Prerequisite Subjects

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Course Topics

1. Organic laser devices2. Ion-driven novel functional devices3. Valleytronics based on atomically thin materials4. Electron spin resonance study of structure and property of organic solids 5. Electrical conduction and superconductivity of organic solids.Preparation for each subject should be made beforehand.

●Textbook

To be designated.

●Additional Reading

To be designated.

●Grade Assessment

Evaluation by oral examinations (60%) and question and answer (40%).

●Notes

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Contacting Faculty

Quentions are acceptable at the lecture.

ssion on Applied Physics （Structural Materials Science and Engineering）A (2.0credits) (応用物理学特別輪講

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Circle form	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

In the lecture on structural Physics, 1. Recognizing the importance of studying the structure of materials, 2. Understanding traditional methods of structural analysis, 3. To deepen the understanding of practical methods of structural study methods such as X-ray diffraction method, 4. We study related books by participants for the purpose of learning recent experiment method or recent analysis method. Select books for each year. We will deepen discussion and understanding by solving exercises etc on our own.

●Prerequisite Subjects

Solid state physics, quantum mechanics, statistical mechanics etc.

●Course Topics

The purpose of the present course is to obtain the basic knowledge for studying the structural physics. In the classes, we will perform below,1. Reading the textbook and discussions. Students read and explain the contents of the textbook in turn, and perform the discussion after that. 2. Soving the questions relating to the textbook. Students are required to acquire the knowledge completely.In order to enhance the class effect, it is necessary to prepare in advance and review after the class.

●Textbook

TBD

●Additional Reading

Introduction to Solid State Physics by C. Kittel,Synchrotron Radiation Crystallography by P.Coppens, X-ray Diffraction by B.E. Warren,

●Grade Assessment

Evaluate the target achievement level by question-and-answer at the time of presentation. Pass score of 60 points or more with 100 full marks.

●Notes

Students are expected to have some knowledge of structural analysis and symmetry.

●Contacting Faculty

Correspond at the time of the seminar.

d Discussion on Applied Physics （Magnetic Materials Engineering） A (2.0credits) (応用物理学特別輪講（磁性材

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Circle form	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	TAKENAKAKoshi Professor	Yasunori YOKOYAMA Assistant Professor

●Course Purpose

Correlated electrons in a solid produce various functional properties of materials. In this lecture, physical properties of correlated-electron materials are briefly reviewed to ground a fundamental basis of the knowledge on physics of correlated electrons and to acquire practical skills required for research and development of functional materials.

Outcomes
1. The ability to understand basis of band theory and to predict physical properties of a solid.
2. The ability to understand effects of electronic correlations on physical properties of a solid.
3. The ability to explain the physical properties, such as magnetic, electronic, and optical properties, of a solid.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Thermodynamics, Statistical Physics, Electromagnetism, Optical Properties of Solids.

●Course Topics

1. Crystal Structure, 2. Wave Diffraction and the Reciprocal Lattice, 3. Crystal Binding and Elastic Constants, 4. Phonons, 5. Free Electron Fermi Gas, 6. Energy Bands, 7. Semiconductor Crystals, 8. Fermi Surfaces and Metals, 9. Superconductivity.

The students learn above topics in a colloquium form.

Before each class, the student should conduct a survey and prepare presentation materials.

●Textbook

C. Kittel, Introduction to Solid State Physics, 8th Edition (Wiley).

●Additional Reading

N. W. Ashcroft and N. D. Mermin, Solid State Physics (W. B. Saunders)
P. A. Cox, The Electronic Structure and Chemistry of Solids (Oxford University Press)
F. Wooten, Optical Properties of Solids (Academic Press)

●Grade Assessment

Evaluated by solutions on whiteboard and reports.
Pass mark 60/100

●Notes

There is no requirement for taking this lecture.

●Contacting Faculty

Questions are welcome within or after each lecture.

Discussion on Applied Physics (Computational Engineering Mathematics) A (2.0credits) (応用物理学特別輪講（計

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Shao_Liang Zhang Professor	Tomohiro SOGABE Associate Professor	KEMMOCHI Tomoya Assistant Professor

●Course Purpose

Through reading some latest books related to computational science and engineering, especially numerical algorithms, students are encouraged to master how to advance his/her own research, as well as to learn recent developments in the field.Goal: able to understand a text book and to explain the details clearly.

●Prerequisite Subjects

Numerical algorithms

●Course Topics

Topics are selected from the following important areas of computational science and engineering.: Numerical algorithms, Optimization, High-performance computing.Preparation for the next class, e.g., understanding technical terms, is required.

●Textbook

A text book is chosen at the beginning of the semester.

●Additional Reading

We will introduce the references on demand.

●Grade Assessment

Oral Examination. Record more than or equal to 60/100 is qualified.

●Notes

Not required.

Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Leonard Chavas Professor	Tomoki TERADA Associate Professor	Joji CHIKENJI Assistant Professor

●Course Purpose
By reading the fundamental literature in biophysics, basic methods and ways of thinking for creative work in the graduate course are obtained through discussions.

●Prerequisite Subjects
Biomolecular Physics Seminar 1A

●Course Topics
Selected papers or texts will be read and discussed during the seminar.

●Textbook
Books or papers will be assigned during the seminar.

●Additional Reading
To be designated.

●Grade Assessment
Achievement of the goals is evaluated equally by the presentations and discussions. Record more than 60/100 is qualified.

●Notes
There is no specific requirement. Journal Clubs will be held face-to-face or remotely (online) as needed (we will inform you within the laboratory about the method).

●Contacting Faculty
At any time in the laboratory, including the time during the seminar.

Division at course	Master's Course		
Class Format	Circle form		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Satoshi KASHIWAYA Professor	Koji ASAKA Lecturer	Rikizo YANO Assistant Professor

●Course Purpose

Through reading scientific literature on novel physical properties peculiar to the surface and interface through the observation of the electronic properties, students are trained to understand basic principles of electronic states and devices consists of novel superconductors, topological materials, atomic layer materials, etc.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Electromagnetism, Statistical mechanics

●Course Topics

1. Development and application of superconducting devices using surface / interface
2. Topological superconductivity and topological quantum computation
3. Electric field induced superconductivity and Josephson junctions
4. Novel physics on Majorana quasiparticles and axion dark matters
5. Surface physics of low-dimensional nanostructures on graphene and nanotube
6. Structures and physical properties of nano-materials

Prepare and review class content and understand the meaning of technical terms.

●Textbook

Text books for this seminar will be determined at the beginning of each semester. Scientific papers are chosen in accord with the progress of the seminar.

●Additional Reading

We will introduce references on demand.

●Grade Assessment

We will evaluate by interview during the lecture.

●Notes

There are no specific course requirements.

●Contacting Faculty

We answer the questions during the lecture.

Seminar on Solid State Engineering 1A (2.0credits) (物性基礎工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study the physical phenomena in condensed matter physics from a microscopic point of view, students read suitable textbooks and papers and learn theoretical methods on electron properties of solids, magnetism, superconductivity and quantum phenomena in semiconductors and cold atoms.
Purposes:
1. Students are able to perform calculations on theoretical problems on quantum many body problems.
2. Students understand and can explain several phenomena of electron properties in solids and superconductivity and superfluidity.

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4

●Course Topics

Understand the background of research on superconductivity, cold atomic gases, topological materials, etc.

●Textbook

Reference books and articles based on your theme will be given as appropriate.

●Additional Reading

C. J. Pethick and H. Smith, “Bose–Einstein Condensation in Dilute Gases” (Cambridge University Press)
L. P. Pitaevskii and S. Stringari, “Bose-Einstein Condensation” (International Series of Monographs on Physics)

●Grade Assessment

Evaluate the achievement of the goals based on daily learning and research results, their discussions, oral presentations at seminars, and questions and answers.

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical physics, and mathematics for physics is required.

●Contacting Faculty

At each seminar.

Course Name	Applied Physics		
Starts 1	2 Spring Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study the materials and physical phenomena from a microscopic point of view, students read suitable papers and learn theoretical methods on electron properties of solids, superconductivity/superfluidity, topological insulators and relevant topological quantum phenomena. Students are required to solve new problems in condensed matter physics, summarize the results, and give a presentation.
Purposes:
Students can solve new problems in one of the following systems:
1. Topological Superconductor, topological insulators, and related materials
2. Cold atoms3Low dimensional new materials, 4 Topological magnet
3. Monolayer materials
4. New frontiers of magnetism (Skyrmion)

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4, Read and Discussion on Applied Physics (Solid State Engineering) 1A & 1B

●Course Topics

Deal with unresolved issues regarding superconductivity, cold atomic gases, topological materials, etc., and obtain new knowledge.

●Textbook

Reference books and articles based on your theme will be given as appropriate.

●Additional Reading

L. P. Pitaevskii and S. Stringari, “Bose-Einstein Condensation” (International Series of Monographs on Physics)

●Grade Assessment

Evaluate the achievement of the goals based on daily learning and research results, their discussions, oral presentations at seminars, and questions and answers.

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical physics, and mathematics for physics is required.

●Contacting Faculty

At each seminar and discussion time.

Seminar on Solid State Engineering 1D (2.0credits) (物性基礎工学セミナー1D)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	2 Autumn Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study the materials and physical phenomena from a microscopic point of view, students read suitable papers and learn theoretical methods on electron properties of solids, superconductivity/superfluidity, topological insulators, and relevant topological quantum phenomena. Students are required to solve new problems in condensed matter physics, summarize the results, and give a presentation.
Purposes:
Students can solve new problems in the following systems:
1. Topological Superconductor, topological insulators, and related materials
2. Cold atoms
3. Monolayer materials
4. New frontiers of magnetism (Skyrmion)

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4, Read and Discussion on Applied Physics (Solid State Engineering) 1A-1C

●Course Topics

Deal with unresolved issues regarding superconductivity, cold atomic gases, topological materials, etc., and obtain new knowledge. Summarize the obtained result and make presentations at academic societies and workshops outside the university.

●Textbook

Not specified

●Additional Reading

L. P. Pitaevskii and S. Stringari, “Bose-Einstein Condensation” (International Series of Monographs on Physics)

●Grade Assessment

Evaluate the achievement of the goals based on daily learning and research results, their discussions, oral presentations at seminars, and questions and answers.

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical physics, and mathematics for physics is required.

●Contacting Faculty

At each seminar and discussion time.

Seminar on Optical Science and Engineering 1A (2.0credits) (光物理工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Hideo KISHIDA Professor	Takeshi KOYAMA Associate Professor	Yuto NAKAMURA Assistant Professor

●Course Purpose

Acquire the basic skills to understand the electronic and optical properties of condensed matter and nanoscience.
Acquire the skills to apply the latest researches and methods to the study.

Goal of study:
1. Understanding of electronic and optical properties of condensed matter and nanoscience.
2. Acquire the ability to make presentations and discussions based on the content of English papers.
3. Acquire the ability to make discussions about the experimental techniques and the latest research trends based on the textbook knowledge.

●Prerequisite Subjects

Quantum Mechanics, Optics, Solid State Physics

●Course Topics

1. Optical Properties of Condensed Matter 2. Electronic Properties of Condensed Matter 3. Nanoscience 4. Nonlinear Optics 5. Laser Spectroscopy

Literature introduction and discussions about the above topics. Preparation of a presentation material before the class.

●Textbook

We choose papers from international journals.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Presentations, presentation materials and discussions. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

You can ask questions in the seminar. Otherwise, contact the instructors.

Seminar on Optical Science and Engineering 1B (2.0credits) (光物理工学セミナー1B)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Autumn Semester

Seminar on Quantum Physics in Condensed Matter 1A (2.0credits) (量子物性工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Taishi TAKENOBU Professor	Hiroshi ITO Associate Professor	Hisaaki TANAKA Assistant Professor
	PU Jiang Assistant Professor		

●Course Purpose

Through seminars on recent papers or monographs of pi-electron materials, such as organic molecules, nano-carbon materials, and atomically thin materials, students learn attitudes against academic research; the basics for research techniques and application to specific problems.
Through these activities, students acquire creativity and overall ability for solving specific problems.

●Prerequisite Subjects

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Course Topics

1. Organic laser devices
2. Ion-driven novel functional devices
3. Valleytronics based on atomically thin materials
4. Electron spin resonance study of structure and property of organic solids
5. Electrical conduction and superconductivity of organic solids.

Preparation for each subject should be made beforehand.

●Textbook

To be designated.

●Additional Reading

To be designated.

●Grade Assessment

Evaluation by oral examinations (60%) and question and answer (40%).

●Notes

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Contacting Faculty

Quentions are acceptable at the seminar.

Seminar on Structural Materials Science and Engineering 1A (2.0credits) (構造物性工学セミナー1A)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Seminar	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

The seminar on microstructure engineering deals with structure of crystalline materials. It is composed of a series of 4 seminars, that is, seminar on structure engineering 1A to 1D. The aims of the 4 seminars are 1. to understand the importance

●Prerequisite Subjects

Solid state physics, Diffraction crystallography, Statistical mechanics, Quantum mechanics

●Course Topics

1.To understand the importance to know crystal structure. 2.What is the origin of particular physical properties? 3.To know the properties which are sensitive with structure changes. 4.To know the properties which are not very sensitive with structure charcters

In the class, we will distribute English monographs on structures, articles on English sentences, and original papers written in English. Read these carefully before class and try to increase educational effectiveness.

●Textbook

The text will be chosen from monographs, review articles or original papers.

●Additional Reading

Introduction to Solid State Physics by C. Kittel,Synchrotron Radiation Crystallography by P.Coppens, X-ray Diffraction by B.E. Warren,

●Grade Assessment

Oral Examination and reports

●Notes

Students are expected to have some knowledge of structural analysis and symmetry.

●Contacting Faculty

Correspond at the time of the seminar.

Seminar on Structural Materials Science and Engineering 1B (2.0credits) (構造物性工学セミナー1B)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Seminar	
Course Name	Applied Physics	
Starts 1	1 Autumn Semester	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

The seminar on microstructure engineering deals with structure of crystalline materials. It is composed of a series of 4 seminars, that is, seminar on structure engineering 1A to 1D. The aims of the 4 seminars are 1. to understand the importance of structure engineering, 2. to understand conventional methods of crystal structure analyses, 3. to study practical aspects of experimental technique, and 4. to learn advanced experimental and analytical methods. In 1B, the emphasis is to learn diffraction physics.

●Prerequisite Subjects

Solid state physics, Diffraction crystallography, Statistical mechanics, Quantum mechanics

●Course Topics

1. Discovery of X-ray. 2. The establishment of X-ray diffraction. 3.The crystal structure analyses by single crystal specimens. 4. The crystal structure analyses by powder specimens. 5.The least squares analyses and Fourier method. 6.The advent of Synchrotron.

In the class, we will distribute English monographs on structures, articles on English sentences, and original papers written in English. Read these carefully before class and try to increase educational effectiveness.

●Textbook

The text will be chosen from monographs, review articles or original papers.

●Additional Reading

Synchrotron Radiation Crystallography by P.Coppens, Introduction to Solid State Physics by C. Kittel, X-ray Diffraction by B.E. Warren, Solid State Physics by H. Ibach and H. Luth

●Grade Assessment

Oral Examination and reports

●Notes

Students are expected to have some knowledge of structural analysis and symmetry.

Seminar on Magnetic Materials Engineering1A (2.0credits) (磁性材料工学セミナー1A)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Seminar	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	TAKENAKAKoshi Professor	Yasunori YOKOYAMA Assistant Professor

●Course Purpose

This seminar aims to acquire knowledge on physical and chemical backgrounds of functional properties that various materials exhibit, understand the research trend, and learn various experimental methods by thoroughly reading the newest literature. The knowledge will be deepened by presentation and discussion during the seminar.
Goals:
1. Undersitanding the basic physics producing material functions.
2. Analyzing characteristic properties from various aspects
3. Applying these knowledges to research and development of actual functional materials.

●Prerequisite Subjects

Quantum Mechanics, Thermodynamics, Statistical Physics, Electromagnetism, Optical Properties of Solids, Solid State Physics

●Course Topics

1. Electronic Properties of Solids 2. Electronic Correlations 3. Magnetism 4. Transport Properties 5. Optical Properties 6. Thermal Properties 7. Mechanical Properties 8. Solid State Chemistry

The latest papers on condensed matter physics and materials science will be examined in detail from the above viewpoints, and oral presentations and questions will be made.

Before each seminar, the student should conduct a survey and prepare presentation materials.

●Textbook

A paper will be chosen from the newest literature each time.

●Additional Reading

C. Kittel, Introduction to Solid State Physics (John Wiley & Sons)
N. W. Ashcroft and N. D. Mermin, Solid State Physics (W. B. Saunders)
P. A. Cox, The Electronic Structure and Chemistry of Solids (Oxford University Press)
F. Wooten, Optical Properties of Solids (Academic Press)

●Grade Assessment

Passing grade: 60 points out of 100

●Notes

There is no requirement for taking this lecture.

●Contacting Faculty

Questions are welcome within or after each lecture.

Seminar on Computational Engineering Mathematics 1A (2.0credits) (計算数理工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Shao_Liang Zhang Professor	Tomohiro SOGABE Associate Professor	KEMMOCHI Tomoya Assistant Professor

●Course Purpose

Through reading basic papers in the field of numerical algorithms (numerical analysis), optimization and high performance computing, students are encouraged to advance his/her own research.

Goal

1. Understanding of Numerical Algorithms (Numerical Analysis) and explaining them clearly.
2. Understanding of Optimizations and explaining them clearly.
3. Understanding of High Performance Computing and explaining them clearly.

●Prerequisite Subjects

Linear algebra I, II, Analysis, Applied mathematics

●Course Topics

1. Fast and accurate algorithms for large-scale numerical linear algebra
2. Practical algorithms for combinatorial optimization problems
3. High performance computing

●Textbook

We will introduce appropriate references as required.

●Additional Reading

We will introduce appropriate references as required.

●Grade Assessment

Presentation and discussion.
The basic level of the goals are required for the qualification.

●Notes

Not required.

Lecturer	Shao_Liang Zhang Professor	Tomohiro SOGABE Associate Professor	KEMMOCHI Tomoya Assistant Professor

●Course Purpose

Through reading advanced papers in the field of numerical algorithms (numerical analysis), optimization and high performance computing, students are encouraged to advance his/her own research.

Goal

1. Deeper understanding of Numerical Algorithms (Numerical Analysis) and explaining them clearly.
2. Deeper understanding of Optimizations and explaining them clearly.
3. Deeper understanding of High Performance Computing and explaining them clearly.

●Prerequisite Subjects

Linear algebra I, II, Analysis, Applied mathematics,Seminar on Computational Engineering Mathematics 1A, 1B

●Course Topics

1. Fast and accurate algorithms for large-scale numerical linear algebra
2. Practical algorithms for combinatorial optimization problems
3. High performance computing

●Textbook

We will introduce appropriate references as required.

●Additional Reading

We will introduce appropriate references as required.

●Grade Assessment

Presentation and discussion.
The basic level of the goals are required for the qualification.

●Notes

Not required.

●Contacting Faculty

Seminar on Biomolecular Physics 1A (2.0credits) (生体分子物理工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Leonard Chavas Professor	Tomoki TERADA Associate Professor	Joji CHIKENJI Assistant Professor

●Course Purpose

The purpose of this class is to acquire the basic knowledge necessary for studying the structure, dynamics, and functions of biopolymers and related substances, as well as to understand the application of physics to experimental, theoretical, and computational research methods, by reading textbooks, introducing literatures, and reporting on their research. In addition, students will understand research trends in related fields and seek clues for creative research. The goal of this class is to enable students to:
1. Understand and explain the structures and functions of proteins.
2. Understand and explain some of the protein structure determination techniques and the related techniques.
3. Understand and explain some of the research methods for the dynamic properties and stability of proteins.

●Prerequisite Subjects

Biological Science, Biophysics, Thermodynamics, Statistical Physics

●Course Topics

1. Protein structure
2. Protein dynamics
3. Protein function
4. Experimental methods required for protein research
5. Theoretical and computational methods required for protein research

Prepare before the presentation and discuss widely after the seminar to deepen your understanding.

●Textbook

To be designated.

●Additional Reading

Not specified.

●Grade Assessment

Achievement of the goals is evaluated equally by the presentations and discussions. Record more than 60/100 is qualified.

●Notes

There is no specific requirement. Seminars will be held face-to-face or remotely (online) as needed (we will inform you within the laboratory about the method).

●Contacting Faculty

Questions are encouraged within or after the seminar.

Seminar on Crystal Physics 1A (2.0credits) (結晶物性工学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Koh SAITOH Professor	Makoto KUWAHARA Associate Professor	Takafumi ISHIDA Assistant Professor

●Course Purpose

Seminars on the fabrication, characterization and application of nanocrystalline materials using original papers as a text.

●Prerequisite Subjects

Advanced Lectures on Condensed Matter Physics I,II

●Course Topics

1. Electron optics, 2. Electron microscope, 3. Interaction between electrons and specimens, 4. Scattering by amorphous specimen and its phase contrast, 5. Electron diffraction, 6. Various modes of electron diffraction and applications, 7. Imaging of crystalline specimens and lattice defects, 8. Elemental analysis by EDX and EELS, 9. Radiation damages by fast electrons

●Textbook

Transmission Electron Microscopy, L. Reimer, Springer

●Additional Reading

Transmission Electron Microscopy I - IV, David. B. Williams and Barry C. Carter, Springer.

●Grade Assessment

Oral test

●Notes

No registration requirement

●Contacting Faculty

Questions are accepted during the seminar.email: saitoh(at)imass.nagoya-u.ac.jp

Seminar on Crystal Physics 1B (2.0credits) (結晶物性工学セミナー1B)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Autumn Semester		
Lecturer	Koh SAITOH Professor	Makoto KUWAHARA Associate Professor	Takafumi ISHIDA Assistant Professor

●Course Purpose
Seminars on the fabrication, characterization and application of nanocrystalline materials using original papers as a text.

●Prerequisite Subjects

Seminar on Nano-Structural Analysis 1A (2.0credits) (ナノ構造解析学セミナー1A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Satoshi KASHIWAYA Professor	Koji ASAKA Lecturer	Rikizo YANO Assistant Professor

●Course Purpose

Through reading scientific literature on novel physical properties peculiar to the surface and interface through the observation of the electronic properties, students are trained to understand basic principles of electronic states and devices consists of novel superconductors, topological materials, atomic layer materials, etc.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Electromagnetism, Statistical mechanics

●Course Topics

1. Development and application of superconducting devices using surface / interface
2. Topological superconductivity and topological quantum computation
3. Electric field induced superconductivity and Josephson junctions
4. Novel physics on Majorana quasiparticles and axion dark matters
5. Surface physics of low-dimensional nanostructures on graphene and nanotube
6. Structures and physical properties of nano-materials

Prepare and review class content and understand the meaning of technical terms.

●Textbook

Text books for this seminar will be determined at the beginning of each semester. Scientific papers are chosen in accord with the progress of the seminar.

●Additional Reading

We will introduce references on demand.

●Grade Assessment

Object achievement is evaluated by quality of presentation and answers against questions in the seminar. Score of at least 60 points out of a possible 100 is required to pass.

●Notes

There are no specific course requirements.

●Contacting Faculty

Answer during the lecture.

	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Associated Faculty		

●Course Purpose

The aim of this course is to expand the student’s ability as a researcher by studying in an abroad laboratory and learn different methods and ways of thinking, as well as communicate on a daily base with foreign researchers.

By completing the course, the students are expected to acquire various research methods and ways of thinking, gain the ability to tackle research problems from multiple angles, and acquire a broad international perspective.

●Prerequisite Subjects

Basic and specialized subjects related to the research subject, English, Advanced Lectures on Scientific English

●Course Topics

Students will stay in an abroad laboratory that will be chosen based on the participant’s research field and interest. The course consists of the following contents.

1. Theme setting and literature review
2. Formulating a research plan
3. Analyzing the results and discussion
4. Presentation of the results

After the class, students should review the analyzing processes of the research results and investigate related literatures.

●Textbook
Will be introduced at the host laboratory depending on the research subject

●Additional Reading
Will be introduced at the host laboratory if necessary

●Grade Assessment
Conducting research in an abroad laboratory for one semester and submitting a report is a prerequisite. Evaluation will be based on the student's report (50%) and oral presentation (50%). To pass, the students have to demonstrate that they have the capacity to adequately analyze the results and have acquired the basic knowledge to interpret the results.

●Notes

●Contacting Faculty
Questions will be answered by the supervisors at the host laboratory during the course.

Experimental Research and Exercises on Solid State Engineering A (2.0credits) (物性基礎工学特別実験・演習A)

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Experiment and Exercise		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

In order to study physical phenomena in quantum physics and statistical physics from a microscopic point of view, students read related articles and give presentations about them, with collecting information needed to understand the articles by themselves. Students learn basic theoretical methods in quantum physics, statistical physics, and solid-state physics, and apply them for some basic models.
Purposes:
1. Students learn basic on quantum statistical physics.
2. Students are able to solve some models analytically or numerically.
3. Students can read and understand the foremost research papers.

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4

●Course Topics

Students read articles on recent topics of superconductivity, superfluidity and topological materials, and give an oral presentation about them. Students also write a report on presentations from other group members.

●Textbook

not specified.

●Additional Reading

"Bose-Einstein Condensation in Dilute Gases", C. J. Pethick and H. Smith, Cambridge University Press
"Bose-Einstein Condensation", L. P. Pitaevskii and S. Stringari, International Series of Monographs on Physics
"superconductivity", J. B. Ketterson and S. N, Song, Cambridge University Press

●Grade Assessment

Oral presentation, discussion at each seminar, and report

●Notes

Knowledge of condensed-matter physics, quantum mechanics, statistical mechanics, and mathematics for physics is required.

●Contacting Faculty

erimental Research and Exercises on Optical Science and Engineering A (2.0credits) (光物理工学特別実験・演習

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Experiment and Exercise		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Hideo KISHIDA Professor	Takeshi KOYAMA Associate Professor	Yuto NAKAMURA Assistant Professor

●Course Purpose

To study the optical physics. The optical experiment is a powerful tool to study the electronic properties. We can find novel phenomena even on the known materials by adopting a new experimental method. Moreover, we can expect novel optical phenomena on new materials. Through the above experiments, we search for new optical phenomena. Through a series of research activity, students solidify the basic skills in the field of engineering and obtain the applied skills to conduct researches.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Electromagnetics, Optics.

●Course Topics

Students perform experimental study on various electronic properties concentrating on optical properties.

●Textbook

Not designated.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Progress of the research, presentations in meeting, presentation materials and discussions. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

	PU Jiang Assistant Professor		

●Course Purpose

Students make experimental researches on the organic molecules, nano-carbon materials, atomically thin materials, and their functional devices, along one's own subjects. Through these activities, students acquire creativity and overall ability for solving specific problems.

●Prerequisite Subjects

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Course Topics

1. Organic laser devices2. Ion-driven novel functional devices3. Valleytronics based on atomically thin materials4. Electron spin resonance study of structure and property of organic solids 5. Electrical conduction and superconductivity of organic solids.Preparation for each subject should be made beforehand.

●Textbook

To be designated

●Additional Reading

To be designated

●Grade Assessment

Evaluation by oral examinations (60%) and question and answer (40%).

●Notes

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Contacting Faculty

Quentions are always acceptable

ental Research and Exercises on Quantum Physics in Condensed Matter B (2.0credits) (量子物性工学特別実験

Course Type	Specialized Courses

tal Research and Exercises on Structural Materials Science and Engineering A (2.0credits) (構造物性工学特別実

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Experiment and Exercise	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

We will acquire precise measurements and analysis methods from structural identification to electronic states of functional substances, which are usually difficult to analyze, mainly through experiments of state-of-the-art research using synchrotron radiation X-ray.

●Prerequisite Subjects

Solid state physics, quantum mechanics, statistical mechanics etc.

●Course Topics

In this course, students will learn the principles and practice of experimental methods and analysis of advanced research using synchrotron radiation. Students are expected to plan and prepare for the experiments well in advance.

●Textbook

Not specified

●Additional Reading

Not specified

●Grade Assessment

Students will be judged on the basis of their understanding of the results of experiments and analyses based on their own themes and their interpretation of the results. The basic criterion for passing the course is to compile the results into a presentation, make a presentation, and obtain an evaluation of 60/100 points or higher.

●Notes

Students are expected to have some knowledge of structural analysis and symmetry.

●Contacting Faculty

Correspond at the time of the seminar.

erimental Research and Exercises on Magnetic Materials Engineering A (2.0credits) (磁性材料工学特別実験・演

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Experiment and Exercise	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	TAKENAKAKoshi Professor	Yasunori YOKOYAMA Assistant Professor

●Course Purpose

To acquire the applied skills for creation and integration through the study for master’s thesis

Outcomes
1. The ability to analyze the previous studies on functional materials and to find a new problem.
2. The ability to find the solution for the research theme.
3. The ability to explain the research results by an oral presentation and an article.

●Prerequisite Subjects

Quantum Mechanics, Thermodynamics, Statistical Physics, Electromagnetism, Optical Properties of Solids, Solid State Physics.

●Course Topics

Students study new scientific problems through experiments, analyses, and discussion on the following topics.

1. Magnetism of Transitional-Metal-Based Alloys and Compounds and Their Applications.
2. Electronic Functionalities of Frustrated Systems.
3. Novel Actuating Materials.
4. Thermal Expansion Control by Negative Thermal Expansion Materials.
5. Novel Functionalities of Bio- and Soft-Materials.

●Textbook

Materials will be distributed each time.

●Additional Reading

C. Kittel, Introduction to Solid State Physics (John Wiley & Sons)
N. W. Ashcroft and N. D. Mermin, Solid State Physics (W. B. Saunders)
P. A. Cox, The Electronic Structure and Chemistry of Solids (Oxford University Press)
F. Wooten, Optical Properties of Solids (Academic Press)

●Grade Assessment

Evaluated by research activity in the laboratory. The criteria for passing is to achieve the research project on electronic phase control for development of novel functional materials. Passing grade: 60 points out of 100.

●Notes

There is no requirement for taking this lecture.

Experimental Research and Exercises on Nano-Structural Analysis A (2.0credits) (ナノ構造解析学特別実験・演習A

Course Type	Specialized Courses		
Division at course	Master's Course		
Class Format	Experiment and Exercise		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Satoshi KASHIWAYA Professor	Koji ASAKA Lecturer	Rikizo YANO Assistant Professor

●Course Purpose

Through reading scientific literature on novel physical properties peculiar to the surface and interface through the observation of the electronic properties, students are trained to understand basic principles of electronic states and devices consists of novel superconductors, topological materials, atomic layer materials, etc.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Electromagnetism, Statistical mechanics

●Course Topics

1. Development and application of superconducting devices using surface / interface
2. Topological superconductivity and topological quantum computation
3. Electric field induced superconductivity and Josephson junctions
4. Novel physics on Majorana quasiparticles and axion dark matters
5. Surface physics of low-dimensional nanostructures on graphene and nanotube
6. Structures and physical properties of nano-materials

●Textbook

Text books for this seminar will be determined at the beginning of each semester. Scientific papers are chosen in accord with the progress of the seminar.

●Additional Reading

We will introduce references on demand.

●Grade Assessment

We will evaluate by interview during the lecture.

●Notes

There are no specific course requirements.

Advanced Lectures on Solid State Engineering (2.0credits) (物性基礎工学特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	
Starts 1	Spring Semester ,every other year	
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor

●Course Purpose

Lectures on the phenomena of superfluidity and superconductivity, which is one of the major topics in quantum many-body systems, will be given. Mathematical concept of topology and its application in physics is also discussed.

Purpose:
1. Second quantization
2. What is superfluidity/superconductivity
3. Quantum phenomena in superfluidity/supercondutivity
4. Topological quantum phenomena

●Prerequisite Subjects

Quantum physics A & B, Statistical physics A & B, Solid state physics 1-4

●Course Topics

Fermi and Bose statistics
Basics of Bloch’s theorem
Second quantization
Basics of Superconductivity
BCS theory
Unconventional superconductorsinglet /triplet
BdG equation and Andreev reflection
Tunneling and Josephson effect
Tunneling and Josephson effect in unconventional superconductors
Topological superconductivity and surface Andreev bound state
Majorana fermion
odd-frequency pairing
Bose-Einstein condensation
Mean-field description of superfluidity
Bogoliubof theory for bosonic systems
Spin algebra
Spinor Bose-Einstein condensates
Topology in condensed-matter physics
Introduction to topological insulators

●Textbook

Physics of superconducting junction (Nagoya University Press)

●Additional Reading

Bose-Einstein Condensation (International Series of Monographs on Physics) (Clarendon Pr., 2003) L. P. Pitaevskii & S. Stringari
Physics Reports, Vol. 520, 253 (2012), Y. Kawaguchi and M. Ueda
Introduction to Superconductivity (McGraw-Hill, 1996), Tinkham
Reports on Progress in Physics Vol. 63, 1641 (2000), S. Kashiwaya and Y. Tanaka
Journal of the Physical Socuety of Japan 81, 011013 (2012), Y. Tanaka, M. Sato and N. Ngaosa

●Grade Assessment

report(100%)

●Notes

Basics of quantum mechanics, statistical physics, solid state physics, mathematical physics are needed to understand the lecture.

●Contacting Faculty

By NUCT(After lecture time)After lecture

Advanced Lectures on Optical Science and Engineering (2.0credits) (光物理工学特論)

Course Type	Specialized Courses
Division at course	Master's Course
Class Format	Lecture
Course Name	Applied Physics
Starts 1	Spring Semester ,every other year
Lecturer	Hideo KISHIDA Professor Takeshi KOYAMA Associate Professor

●Course Purpose

Light is a good probe to study physical properties of materials, and research on optical properties of condensed matter, i.e., interactions between light and matter, is involved in an interdisciplinary field of science today. The aim of this class is to understand the optical properties of matter based on quantum mechanics.

Outcomes
1. The ability to explain the optical processes quantum mechanically.
2. The ability to explain the relationship between the dielectric constants and electronic states in matter.
3. The ability to explain the optical properties of various materials in terms of quantum mechanics.

Students acquire the basic skills to understand the optical properties of matter based on quantum mechanics and the applied skills to consider the electronic properties of novel materials.

●Prerequisite Subjects

1. Solid State Physics
2. Electromagnetics
3. Quantum Mechanics

●Course Topics

1. Semiclassical treatment of light-atom/light-molecule interactions
2. Quantization of electromagnetic field
3. Interaction of quantized field with atoms/molecules
4. Dielectric constants and optical spectra
5. Optical processes in condensed matter

●Textbook

Not designated.

●Additional Reading

In the lecture, we will introduce references in which the helpful explanation and figures are written as needed.

●Grade Assessment

Presentation/report.
The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

Students can ask questions after the class.

Advanced Lectures on Quantum Physics in Condensed Matter (2.0credits) (量子物性工学特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	
Starts 1	Autumn Semester ,every other year	
Lecturer	Taishi TAKENOBU Professor	Hiroshi ITO Associate Professor

●Course Purpose

Lectures are given on the novel electronics using pi-electron materials.
Fundamentals of solid-state physics and semiconductor physics and
characteristics of organic materials, nano-carbon materials, and
atomic layer materials are reviewed. Recent applications for wearable devices
are also reviewed. Through these lectures, students learn basis for electronic properties of pi-electrons in solids and application toward electronics.

●Prerequisite Subjects

Quantum mechanics, Thermal and statistical physics, Electromagnetism, Solid state physics, Chemical physics

●Course Topics

1.Fundamentals of semiconductor physics, 2.Fundamentals of organic materials, 3.Fundamentals of nano-carbon materials, 4.Fundamentals of atomic layer materials, 5.Solid state physics on pi-electron materials, 6. Novel electronics using pi-electron materials
Preparation for each subject should be made beforehand.

Advanced Lectures on Structural Materials Science and Engineering (2.0credits) (構造物性工学特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	
Starts 1	Autumn Semester ,every other year	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

In this lecture, the aim is to acquire the applied power of structural property research using quantum beams as advanced probes. In order to understand physical properties, it is necessary to examine various external field responses, and recent experimental research aims to pioneer new physical physics using state-of-the-art probes that have improved their performance to the utmost. In order to understand this unique and extremely interesting physical property, it is necessary to learn the basic principles of the data analysis method and to clarify the electronic state by determining the electron density. Learn the basic knowledge for developing unknown materials together with the group theory and crystal chemistry necessary for this.

●Prerequisite Subjects

solid state physics, condensed matter physics, diffraction physics theory

●Course Topics

1. diffraction principle; 2. Group theory in crystal structure; 3. crystal structure and periodic physics; 4. Electronic state and lattice dynamics; Phase stability and structural phase transition

●Textbook

Synchrotron crystallography, P. Coppens, X-ray diffraction, B.E. Warren, X-ray diffraction and scattering techniques Kikuta

●Additional Reading

Not specified

●Grade Assessment

The evaluation for the achievement target is 40% for questions and answers during the lecture and 60% for report evaluation. A score of at least 60 out of 100 is acceptable.

●Notes

Announcements may be delivered via NUCT.

Advanced Lectures on Magnetic Materials Engineering (2.0credits) (磁性材料工学特論)

Course Type	Specialized Courses
Division at course	Master's Course
Class Format	Lecture
Course Name	Applied Physics
Starts 1	Spring Semester ,every other year
Lecturer	TAKENAKAKoshi Professor

●Course Purpose

Correlated electrons in transition metals and their compounds produce various functional properties of materials. In this lecture, physical properties of correlated-electron materials, such as magnetic, optical and transport properties, are briefly reviewed to ground a fundamental basis of the knowledge on physics of correlated electrons.
Goals:
1. Understanding and explaining the physical background of the properties and functions of solid materials generated by correlated electrons.
2. Applying the above knowledges to the development of new functional materials.

●Prerequisite Subjects

Quantum Mechanics, Thermodynamics, Statistical Physics, Electromagnetism, Electron Theory of Metals, Solid State Physics

●Course Topics

1. Electronic Correlations and Mott Insulator, 2. Optical Properties, 3. Transport Properties, 4. Dielectric Properties, 5. Magnetic Properties of Atoms, 6. Various Magnetic Properties

The students should prepare for the content before each class.

●Textbook

P. A. Cox, The Electronic Structure and Chemistry of Solids (Oxfird University Press)
Additoinal documents are distributed.

●Additional Reading

C. Kittel, Introduction to Solid State Physics (John Wiley & Sons)
F. Wooten, Optical Properties of Solids (Academic Press)

●Grade Assessment

(Evaluation method) In addition to the mid-term exam and the final exam, the evaluation will be based on several reports that are imposed during class. 80% exams, 20% reports.

(Evaluation criteria) Passing grade: 60 points out of 100

●Notes

There is no requirement for taking this lecture.

Advanced Lectures on Biomolecular Physics (2.0credits) (生体分子物理工学特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	
Starts 1	Spring Semester ,every other year	
Lecturer	Leonard Chavas Professor	Tomoki TERADA Associate Professor

●Course Purpose

In this class, students learn how to understand various properties and behaviors of proteins by applying physical concepts and methods. The goal of this class is to enable students to:
1. Understand basic knowledge about proteins and apply physical concepts and methods.
2. Understand and explain how structure determination methods and related techniques are used in the studies of proteins.
3. Understand and explain how computational methods are used in the studies of proteins.

●Prerequisite Subjects

Biological Science, Biophysics, Thermodynamics, Statistical Mechanics

●Course Topics

1. Basics of protein science
2. Protein structure determination
3. Experimental methods related to protein structure determination
4. Molecular dynamics calculations for proteins
5. Application of coarse-grained model to proteins

Review the content of the lecture carefully and ask questions where it is difficult to understand.

●Textbook

not specified

●Additional Reading

Fumio Arisaka, "Protein Science - Biophysical Approach -", Shokabo, ISBN 978-4-7853-5244-8 (in Japanese)
Rupp, "Biomolecular Crystallography: Principles, Practice, and Application to Structural Biology" (Garland Science, ISBN 978-0-8153-4081-2)
Andrew R. Leach, "Molecular Modelling, Principles and Applications", Second Edition (Pearson Prentice Hall, 978-0-5823-8210-7)

●Grade Assessment

Reports. Record more than 60/100 is qualified.

●Notes

There is no specific requirements. Lectures are given on-site as well as on-demand on NUCT (Further changes may be announced on the course site on NUCT, if any). Students can give questions to the instructor and exchange their opinions through "message" function in NUCT.

Advanced Lectures on Nano-structural Analysis (2.0credits) (ナノ構造解析学特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	
Starts 1	Spring Semester ,every other year	
Lecturer	Satoshi KASHIWAYA Professor	Koji ASAKA Lecturer

●Course Purpose
Lectures on novel physical properties peculiar to the surface and interface through the observation of the electronic properties, students are trained to understand basic principles of electronic states and devices consists of novel superconductors, topological materials, atomic layer materials, etc.

●Prerequisite Subjects
Electromagnetism, Physical Properties of Crystalline Materials, Solid State Physics, Diffraction Crystallography

●Course Topics
1Introduction to superconductivity
2Principle and application of superconductors
3Electronic states of superconductors
4Topological quantum phenomena
5. Atomic structures of solid state materials
6. Diffraction by crystals
7. Structure analysis and Physical characterization by electron microscopy
8. Structures and physical properties of nanometer-sized materials

●Textbook
Text books for this seminar will be determined at the beginning of each semester. Scientific papers are chosen in accord with the progress of the seminar.

●Additional Reading
We will introduce references on demand.

●Grade Assessment
We will evaluate by examination and reports.

●Notes
There are no specific course requirements.
No lecture will be conducted in the spring semester of 2022.

●Contacting Faculty
We answer the questions during the lecture.

Large-scale Parallel Computing (2.0credits) (大規模並列数値計算特論)

Course Type	Specialized Courses	
Division at course	Master's Course	
Class Format	Lecture	
Course Name	Applied Physics	Materials Physics
Starts 1	1 Spring Semester	1 Spring Semester
Lecturer	Takahiro KATAGIRI Professor	Satoshi OSHIMA Associate Professor

●Course Purpose

Learning how to use a high speed parallel computer. You will have programming practices using the Supercomputer "Flow" at Nagoya university. The programming languages are Fortran and C.

Target:

1. Understanding the state of the art of high speed parallel computer and parallel programming.
2. Acquiring fundamental skills of parallel programming.

●Prerequisite Subjects

Not specified, but taking some courses for programming is recommended.

●Course Topics

[1] High performance computing and its history
[2] Classification of concepts of high speed parallel computers and their state of the art
[3] Usage of high speed parallel computers
[4] Vector operations, multithreading and parallel processing
[5] Fundamentals of OpenMP
[6] Parallelization of Matrix-Vector Products
[7] Parallelization of Power iteration
[8] Parallelization of Matrix-Matrix Products (1)
[9] Parallelization of Matrix-Matrix Products (2)
[10] Use of Numerical Libraries.
[11] GPU Computing / Machine Learning (1)
[12] GPU Computing / Machine Learning (2)
[13] GPU Computing / Machine Learning (3)
[14] GPU Computing / Machine Learning (4)

Students are required to submit reports for several topics. Reports should be submitted before deadlines for each topics. Students should prepare for the class beforehand.

●Textbook

Documents for lectures will be provided.

●Additional Reading

"Supakon wo shiru: Sono kiso kara saishin no doukou made", T. Iwashita, T. Katagiri, and D. Takahashi (in Japanese).
"Supakon purogramming nyuumon -heiretsu shori to MPI no gakusyuu-", T. Katagiri (in Japanese).
"Heiretsu programming nyuumon: Sample program de manabu OpenMP to OpenACC", T. Katagiri (in Japanese).
"Keisan kagaku no tame no heiretsu keisan -daikibo keisan heno daiippo-", Y. Kaneda, A. Sasai, K. Ishii (in Japanese).

●Grade Assessment

Evaluated by scores of reports. The weights for each targets of this course are the same.
The skills to explain the state of the art of high speed parallel computer and parallel programming, and to implement parallel programs, are evaluated by reports.

●Notes

There are no prerequisites.

●Contacting Faculty

Question time: after each lecture

General questions:
Ph.D, Takahiro Katagiri

Advanced Lectures on Applied Physics I (1.0credits) (応用物理学特論 I)

Course Type	Specialized Courses
Division at course	Master's Course
Class Format	Lecture
Course Name	Applied Physics
Starts 1	1 Spring and Autumn Semester
Lecturer	Part-time Faculty

●Course Purpose
The aim of the lecture is to learn a recent topics in applied physics.

●Prerequisite Subjects
Subjects related to the Department of Applied Physics

●Course Topics
A special lecture on physical science and engineering is given.

Submissions of the reports are required. The keywords related to the research activities of each research group should be surveyed prior to the class.

●Textbook
There is no specific text book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Additional Reading
There is no specific reference book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Grade Assessment
(Evaluation method)Evaluate the level of achievement for the target based on exmamination or the submitted report.

(Evaluation criteria)
Understanding and explaining the basic concepts and ideas related to the field of applied physics.

●Notes
There is no requirement.

●Contacting Faculty
Questions are welcome after each lecture.

Advanced Lectures on Applied Physics II (1.0credits) (応用物理学特論 II)

Course Type	Specialized Courses
Division at course	Master's Course
Class Format	Lecture
Course Name	Applied Physics
Starts 1	1 Spring and Autumn Semester
Lecturer	Part-time Faculty

●Course Purpose
The aim of the lecture is to learn a recent topics in applied physics.

●Prerequisite Subjects
Subjects related to the Department of Applied Physics

●Course Topics
A special lecture on physical science and engineering is given.

Submissions of the reports are required. The keywords related to the research activities of each research group should be surveyed prior to the class.

●Textbook
There is no specific text book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Additional Reading
There is no specific reference book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Grade Assessment
(Evaluation method)Evaluate the level of achievement for the target based on exmamination or the submitted report.

(Evaluation criteria)
Understanding and explaining the basic concepts and ideas related to the field of applied physics.

●Notes
There is no requirement

●Contacting Faculty
Questions are welcome after each lecture.

Advanced Lectures on Applied Physics III (1.0credits) (応用物理学特論 III)

Course Type	Specialized Courses
Division at course	Master's Course
Class Format	Lecture
Course Name	Applied Physics
Starts 1	1 Spring and Autumn Semester
Lecturer	Part-time Faculty

●Course Purpose
The aim of the lecture is to learn a recent topics in applied physics.

●Prerequisite Subjects
Subjects related to the Department of Applied Physics

●Course Topics
A special lecture on physical science and engineering is given.

Submissions of the reports are required. The keywords related to the research activities of each research group should be surveyed prior to the class.

●Textbook
There is no specific text book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Additional Reading
There is no specific reference book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Grade Assessment
(Evaluation method)Evaluate the level of achievement for the target based on exmamination or the submitted report.

(Evaluation criteria)
Understanding and explaining the basic concepts and ideas related to the field of applied physics.

●Notes
There is no requirement.

Innovation Practice Course (4.0credits) (イノベーション体験プロジェクト)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Experiment and Exercise		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Shinji DOKI Professor		

●Course Purpose

Under the instruction of the company engineer (DP, Directing Professor), I carry out the project for the problem solution by the team of several people consisting of different specialisms. In this way, it is intended to let you sense ability for problem discovery, the importance of the general intellectual power of compound eyes on the basis of real world bodily.
I know a point of view, the plan as the company and perform a discussion, exchange of opinions between the different specialty and aim for the breeding of the viewpoint general, to see engineering by examining it as the problem solution person concerned from different angles.

●Prerequisite Subjects

It is strongly recommended to take the industry-university joint educational courses such as Focus on Venture Business and ,etc.

●Course Topics

I organize different specialty, the team (several/team) consisting of the students of the department several sets, and DP is the instruction in each each team. Based on the project theme that DP determined, I set the problem that a student carries out concretely. For 75 hours (principle one day a week), I accomplish the project for the problem solution.
Prior lecture to affect a project theme by the DP
Setting (opinion, information exchange, allied investigation, examination, discussion) of the concrete problem by the student
Enforcement of the problem solution project
Summary, report of the result

I assume this a main component.
In addition, I may be given an investigation and the consideration in conjunction with the theme as a problem from DP. Report it in a date (the next time lectures) when it was appointed, and announce it; and a thing corresponding to the exchange of opinions in the team.

●Textbook

Papers, books and/or documents that the lecturer (DP) will introduce.

●Additional Reading

Papers, books and/or documents that the lecturer (DP) will introduce.

●Grade Assessment

I evaluate it through accomplishment, the discussion of the project, result announcement. If a consideration power, the adjustability for the problem solution, the expansion of the field of vision are accepted, it is said that I pass.

●Notes

No specific requirements.

●Contacting Faculty

The lecturer (DP) and the project staff of the university accept questions at any time.

Research Internship１ U2 (2.0credits) (研究インターンシップ１ U2)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Practice		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Shinji DOKI Professor		

●Course Purpose

Through the training to affect technology development, the study of the company in the company is advanced, and experience the challenge to a practical problem. In this way, it is aimed for upbringing of human resources tying engineering to creation of the social value.
It is wider in a technique and a study, and a consciousness, ability to catch in a general viewpoint (utility, economy) and communication power is bred and aims for what is reflected by a study, the study at the university.

●Prerequisite Subjects

It is strongly recommended to take the industry-university joint educational courses such as Focus on Venture Business and ,etc.

●Course Topics

In the company accepting an intern, I make the training (study) about the study theme that a company shows.
Orientation to affect the overall company concerned and the training medium
Enforcement (including cooperation, the adjustment with the company staff) of the training theme
Summary, report of the training result
I assume a report (presentation) of the training result to the university a main component.
As the associated document, documents investigation may not support during the working hours that a company sets, I do the attendance of the lecture about "the handling, a point to keep in mind by basic knowledge and the study internship of intellectual property rights" to need what I study in the training overtime by oneself, and to perform on the university side prior to the company training again with

requisiteness.

●Textbook

Papers, books and/or documents that the staff instructing the training in the company will introduce.

●Additional Reading

Papers, books and/or documents that the staff instructing the training in the company will introduce.

●Grade Assessment

I am given in the following on 20th in the total days that engaged in the training in the company.
I do that I announce the result to the university in a result briefing session to perform after the training if essential.
I evaluate it based on result announcement contents and an evaluation book of the training staff making. I recognize an experience-based effect in the training by oneself, and will to plan reflection to a study, the study at the university does it with a pass if admitted.

●Notes

No specific requirements.

●Contacting Faculty

The training staff of the company and the study internship staff of the university accept questions at any time.

	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Manato DEKI Associate Professor		

●Course Purpose

To research in advanced engineering, it is necessary to learn the latest research trends through practice. Through symposium-style academic discussions, students will be able to study cutting-edge science and engineering research and discuss the latest trends in the subject areas.

●Prerequisite Subjects

Knowledge of the subject areas.

●Course Topics

Participated in special lectures set every year from the fields of biochemistry, analysis, semiconductors, polymers, and startups related to cutting-edge science and engineering, and participated in a symposium where research presentations on cutting-edge engineering were presented. By participating, students will study cutting-edge science and engineering research and discuss the latest trends in the subject areas. After taking the course, study and study the relevant field in detail.

●Textbook

Distribute as appropriate.

●Additional Reading

Distribute as appropriate.

●Grade Assessment

Participate in the VBL Symposium held around November, attend supplementary lectures, and submit a report.

Report. A score of 60 or more out of 100 will be passed. Pass if you have a broad understanding of the subject area. Highly appreciate the point of contact with your own research, new business and research proposals.

●Notes

There are no special requirements. Students who are interested in startups are preferred.

Important Notes
Students who wish to take the course will be able to register for the "Advanced Lectures on Frontier Technologies and Sciences" at NUCT after they have registered for the course.
Note that all contacts from NUCT are available for the lectures.
Students who missed the registration period should register the page of "Advanced Lectures on Frontier Technologies and Sciences" on the NUCT website.

●Contacting Faculty

Arranging the schedules by e-mail and etc.

Advanced Experiments for Frontier Technologies and Sciences (1.0credits) (最先端理工学実験)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Experiment		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Manato DEKI Associate Professor		

●Course Purpose

In order to advance research in engineering, it is necessary to learn about the latest research trends through practice. The purpose of this experiment is to conduct research experiments using the most advanced experimental equipment and simulators. Through this experiment, students will be able to understand the principles and learn how to use the equipment owned by VBL (maskless exposure system, dry etching system, atomic layer deposition system, metal deposition system) and device simulators. In addition, the goal is to comprehensively acquire knowledge and skills related to advanced experiments and presentation techniques for the assigned research by reporting the results.

●Prerequisite Subjects

it is advisable to acquire basic knowledge on the subject research.

●Course Topics

The experiment will be conducted at the Venture Business Laboratory building.
The report meeting will be held online or at the above building.
If you choose an assigned experiment with a predetermined task, the required curriculum includes the use of either a maskless exposure system, ICP etching system, or atomic layer deposition system. Students will use these devices to perform their assignments and learn the principles and practical use of these devices. In the case of experiments proposed by the students (original experiments), the students will propose their own device simulation experiments and research using the above equipment, and work with the instructor to produce experimental results. In the end, students will organize and discuss the results, present their findings, and learn how to practically use state-of-the-art equipment and simulation skills.

Students should learn the basic knowledge of the research they are assigned.

●Textbook
Distribute as needed. Please check the required documents by yourself.

●Additional Reading
Distribute as needed. Please check the required documents by yourself.

●Grade Assessment
Exercise (50%) and presentation of research results (50%) will be evaluated. Understanding the measurement principle and usage is used as a criterion for acceptance, but the research achievements and new approaches to research are highly evaluated. A score of 60 or more out of 100 is a passing score.

●Notes
Course Registration
No course requirements.
The number of registered students should be about 10.

Important Notes
Students who wish to take the course will be able to register for the "Advanced Experiments for Frontier Technologies and Sciences" at NUCT after they have registered for the course.
Note that all contacts from NUCT are available for the lectures.
Students who missed the registration period should register the page of "Advanced Experiments for Frontier Technologies and Sciences" on the NUCT website.

●Contacting Faculty
We will respond via NUCT's message system and e-mail.

Introduction to Academic Communication (1.0credits) (コミュニケーション学)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	Graduate Chemistry
	Automotive Engineering	Automotive Engineering	Civil and Environmental Engineering Graduate
	Physical Engineering Graduate		
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester		
Lecturer	ReikoFURUYA Associate Professor		

●Course Purpose

Students will learn presentation skills for academic purposes, which may include giving academic presentations.
Japanese students are expected to present in English and international students in Japanese in the seventh or eighth class meeting.
By taking this class, students are expected to be able to do the following:
-Give a solid presentation with confidence and without hesitance
-Grasp the characteristics of successful presentations
-Use techniques learned in class in their own presentation

●Prerequisite Subjects

English language classes for Japanese students
Japanese language classes for international students

●Course Topics

(1) Ways to convey messages in presentation
(2) The language of a presentation
(3) Tips for making effective slides
(4) Observation and analysis of video-taped presentation by a past student
(5) Paper vs presentation
(6) Preparation for individual presentation

(7) Individual presentations I
(8) Individual presentations

This course requires students to work outside of the classes for individual presentation.

●Textbook

Textbooks and references are not assigned for this class. However, depending on the student and class progress, necessary materials will be distributed in class.

●Additional Reading

1The Japan Times
2:

●Grade Assessment

Individual presentation: 50%
Active class participation: 50%

Grades: A+: 100%-95%, A: 94%-80%, B: 79%-70%, C: 69%-65%, C-: 64%-60%, F: 59%-0%

Grading will be decided based on the ability to give an effective academic presentation.

●Notes

There are no requirements for taking this class.
This class will be held face to face unless there are international students who cannot come to Japan.

●Contacting Faculty

Questions will be answered before class, in class, after class or by e-mail.
E-mail address　o47251a@cc.nagoya-u.ac.jp

Latest Advanced Technology and Tasks in Automobile Engineering (3.0credits) (先端自動車工学特論)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	Automotive Engineering
	Automotive Engineering		
Starts 1	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester		
Lecturer	Yasuhiko SAKAI Designated Professor		

●Course Purpose

This course is intended to study the latest advanced technology of automobile engineering from top researchers of universities and industries. The topics of lectures are related to almost all fields of automotive industries, such as hibrid cars, electric cars, automated driving and crash safety. It is asle intended to develop the English hearing/speaking ability. The attainment targets are as follows:

1. Understand the latest technology of automotive engineering.
2. Underatand company's automotive production system.
3. Improve English ability in the field of socience and engineering.
4. Strengthen communication skills and presentation skills in English by studying with international students.

●Prerequisite Subjects

lectures related to fundamental physics, mechanical, electrical and information engineering.

●Course Topics

A. Lectures

1. The Car Industry, Market Trend, Circumstance and Its Future.
2. Overview of Automotive Development Process.
3. Observation and Evaluation of Drivers' Behavior Perspective.
4. Car Materials and Processing.
5. Movements and Control of a Car.
6. Safety Engineering for the Prevention of Accidents.
7. Crash Safety.
8. Automobile Embedded Computing System.
9. Wireless Technologies in ITS.

10.Applications of CAE to Vehicle Development.
11.Energy Saving Technology for Automobiles.
12.Automated Driving.
13.Traffic Flow Characteristics.
14.Cars and Roads in Urban Transportation Context.
15.Automobile in Aging Society.
B. Factory Visits
1.Toyota Motors Corp., 2. Mitsubishi Motors Corp., 3. Toyota Boshoku Corp., 4.Suzuki Museum,
5.Toyota Commemorative Museum, 6. Traffic Safety and Environmental Lab.
C. Group Research Project
Several students form one group and each group selects one topic. They investigate and discuss about this topic and make presentations.
After each lecture is finished, read the handout and write a repor about each lecture with your comments.

●Textbook
Handout delivered in each lecture

●Additional Reading
Introduced in the lectures

●Grade Assessment
Evaluation will be based on (a) Discussions in the lectures 20%, (b) report for each lecture 20%, (c) group presentation 30%. and (d) report on research subject 30%. It is necessary to attend factory visits.In each item, the undastanding of the concepts is especially evaluated.
Summing up the all scores from (a) to (d) and the students with evaluation A, B, or C can pass this subject.

●Notes
1. There are limits of enrollment capacity.Full course student limit is about 10.Auditor limit for each lecture is about 10.
2. English ability is checked before accepted as a student.

●Contacting Faculty
The lecturer will answer questions about the content of the lesson, and the instructor in charge will answer other questions.

ysakai@mech.nagoya-u.ac.jp

Advanced Lectures on Scientific English (1.0credits) (科学技術英語特論)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	Automotive Engineering
	Automotive Engineering	Civil and Environmental Engineering Graduate	Physical Engineering Graduate
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
Lecturer	Part-time Faculty		

●Course Purpose

This course aims to help students write a well-structured research paper in English and expand their vocabulary and expression list relating to academic writing.
By the end of the course, students will be able to:
- explain the basic structure of a research paper
- explain the characteristics of each component
- use vocabulary adequately
- use expressions adequately
- choose the most relevant citation style
- write a mini research paper

●Prerequisite Subjects

"English (basic)" and "English (intermediate)" (or equivalent)

●Course Topics

English is the language of instruction in this course.
After reviewing the basics of academic writing, students will understand the fundamental structure of the research paper. Students will improve their vocabulary and expressions to write a well-structured paper as they analyze sample research papers. Additionally, students will understand the citation styles by exploring the descriptions in the instructions for authors in the academic journals of their choice. In the classroom activities, students will exchange ideas, give an oral presentation, practice their writing skills, and give feedback to each other.
1. Basics of academic writing in English 1: Paragraph writing
2. Basics of academic writing in English 2: Making an outline
3. Fundamental structure of research paper: Structural analysis

4. Oral presentation: Journals, instructions for authors, and citation styles
5. Writing 1: Title and abstract
6. Writing 2: Research method
7. Writing 3: Results and discussions
8. Writing 4: Introduction and conclusion

●Textbook

No textbook for this class. Handouts will be distributed in class.

●Additional Reading

Glasman-Deal, H. (2021). Science Research Writing: For Non-Native Speakers of English. Imperial College Press.
Paltridge, B. (2019). Thesis and Dissertation Writing in a Second Language. Routledge.
Swales, J.M. & Feak, C.B. (2012). Academic Writing for Graduate Students. The University of Michigan Press.
Wallwork, A. (2013). English for Academic Research: Grammar, Usage and Style. Springer.
Wallwork, A. (2016). English for Writing Research Papers. Springer.

●Grade Assessment

The following evaluation items constitute the maximum score of 100:
Class Participation (25%)
Homework Assignments (35%)
Oral Presentation (10%)
Mini-Research Paper (30%)
A student must evidence a total score of 60 or higher on the final grading scale to pass this course.

●Notes

-No prerequisite.
-There is a chance to redesign the class format, schedule, and grading system depending on the COVID-19 situation.
-There will be approximately six face-to-face classes and two online (synchronous or on-demand) classes.
-Online, synchronous classes will be given on Zoom, whereas the on-demand classes will be given on NUCT.
-The first class will be met face-to-face in the regular classroom on campus, and the class format in the remaining semester will be announced via "Messages" on NUCT.
-Students are expected to express/exchange their ideas and opinions on NUCT and/or on another interactive presentation system to be announced in class.
-An active dialog is highly valued in this class, so your enthusiastic participation is vital to the success of your learning.
-Basically, homework is assigned on a weekly basis.

●Contacting Faculty

Use the "Messages" tool on NUCT to contact the instructor. Only for a limited period of time (until the secondary course registration period ends), you can reach the instructor by email.

Focus on Venture Business I (2.0credits) (ベンチャービジネス特論 I)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	
Lecturer	Part-time Faculty	Manato DEKI Assistant Professor	

●Course Purpose

People often point out that the layer of startup companies should assume the leading edge is thin. Part of the cause depends on the system, but in many cases, it is due to the difference in perceptions of the entrepreneurship between East and Western researchers. In this course, you study the basic knowledge and goals required as engineers and researchers when commercializing/starting a “university research.” We will show examples of technology development and commercialization based on research results of universities, entrepreneurship in companies and venture startups, and consider venture business utilizing research. Through this lecture, entrepreneurs' mindsets will be formed as well as minimum knowledge of patents.

●Prerequisite Subjects

●Course Topics

Through the trend and environment of venture business in our country, we will consider what is necessary to actually and personally launch a venture business.

1. commercialization and entrepreneurship Why venture business ---Risks and advantages
2. knowledge and preparation for commercialization and entrepreneurship ---points to keep in mind as an engineer/researcher
3. from university research to commercialization/start-up --- how to proceed with R&D in a company
4. promotion of commercialization ---negotiations and market research for commercialization ----.
5. innovation theory
6. case studies in the mobility field
7. biotechnology and medical fields
8. case studies in the field of electronic devices
9. technology management (patents, etc.)
10. summary

A report will be assigned, so students should identify and discuss their own interests and issues while attending the lecture.

●Textbook
Distribute materials as appropriate.

●Additional Reading

●Grade Assessment
Evaluate based on self-made problem report Understanding the problems and solutions for startups that respond to the problems in the lecture is a criterion for success. The contents of the report are comprehensively evaluated, and a score of 60 or more is considered acceptable. New business proposals will be appreciated.

●Notes
Do not have any special requirements. We hope students who are interested in startups.

Important Notes
Students who wish to take the course will be able to register for the "Focus on Venture Business I" at NUCT after they have registered for the course.
Note that all contacts from NUCT are available for the lectures.
Students who missed the registration period should register the page of "Focus on Venture Business I" on the NUCT website.
In addition, all lectures will be conducted remotely using online conferencing tools.

●Contacting Faculty
the break after the lecture.

Focus on Venture Business II (2.0credits) (ベンチャービジネス特論II)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	
Lecturer	Manato DEKI Assistant Professor		

●Course Purpose

By referring to the examples of commercialization, in-company entrepreneurship and venture entrepreneurship given in the special lecture on venture business I, you study the specialized knowledge necessary for entrepreneurship and start-up from a public accountant, SME consultant, etc. Talks are held with specialists in Japan to acquire the knowledge needed for venture business management.

Lectures will be held in a discussion style.
As a part of this, the maximum number of registered students will be set at 60.
If the number of registered students exceeds 60, students will be selected by lottery. The number of students will be determined by lottery.
Students who wish to take this course should first register at NUCT.
Information on the lottery will be sent to applicants via the NUCT lecture website.

However, students enrolled in the "DII Collaborative Graduate Program for Accelerating Innovation in Future Electronics " may take the course without a lottery.

●Prerequisite Subjects

●Course Topics

1. the japanese economy and venture business
2. current status of venture business
Venture and management strategy
Venture and marketing strategy
Venture Business and Corporate Accounting
Venture and financial strategy
7. case studies (emphasis on management strategy)

8. case study (focus on marketing strategy)
9. case study (focus on financial strategy)
10. case study (focus on capital policy: IPO company)
11. business plan business idea and competitive advantage
Business Plan Profitability Plan
13. business plan financial plan
Business Plan Business Plan Operation and Summary
15. summary

It is necessary for future businesses to research and understand various literature and online information regarding the lecture content.

●Textbook

●Additional Reading

●Grade Assessment

Ethics and Security in Engineering (2.0credits) (工学のセキュリティと倫理)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Chemical Systems Engineering
	Electrical Engineering	Electronics	Information and Communication Engineering
	Mechanical Systems Engineering	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering
	Department of Energy Engineering	Department of Applied Energy	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Hideo KISHIDA Professor		

●Course Purpose

The aim of the lecture is to understand ethics, intellectual property rights, information security required at the start of master thesis research. After taking this course, the students are expected to have abilities on:

1. Understanding of ethics for engineers
2. Understanding of ethics for researchers
3. Understanding of intellectual property rights
4. Understanding of information security

●Prerequisite Subjects

None because this is one of the common basic subject for future activity as a researcher or an engineer.

●Course Topics

1)Introduction
2)Ethics for engineers
3)Ethics for researchers
4)Intellectual property rights
5)Information security
6)Summary

Submission of the report after each class is mandatory.

●Textbook

Instead of using textbook, original lecture notes will be provided at each class.

●Additional Reading

Original lecture notes will be provided at each class.

●Grade Assessment

Credits will be awarded to those students who score 'Pass' based on the reports and /or subjects given by each lecture.

●Notes

None because this is one of the common basic subject for future activity as a researcher or an engineer.

This lecture will be given in an on-demand format using NUCT. In each lecture (1st lecture: Apr. 11), the course materials should be downloaded from the NUCT. If you cannot access the NUCT site of this lecture, please contact the instructor (Kishida, kishida@nagoya-u.jp) by e-mail with your name and student number. Even in this case, the registration is required.

●Contacting Faculty

After each class student can ask questions through the message function of NUCT.
Otherwise, contact to:
Prof. Kishida kishida@nagoya-u.jp

The exchange of opinions among the students can be made through the message function of NUCT.

Internship A (1.0credits) (学外実習Ａ)

Course Type	Comprehensive engineering courses
Division at course	Master's Course
Class Format	Practice
Course Name	Applied Physics
Starts 1	1 Spring and Autumn Semester
Lecturer	Associated Faculty

●Course Purpose
Students are dispatched to the research and development department of a cooperating company and engage in research and development work on a predetermined theme for a predetermined period of time, thereby learning how to set and solve technical issues at the company. Through this experience, students acquire practical abilities and broad insight.

●Prerequisite Subjects
Subjects related to Applied Physics

●Course Topics
The research content is determined based on the agreement between the the company staff and the students.

●Textbook
There is no specific text book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Additional Reading
There is no specific reference book, but in some cases it may be specified by the lecturer or distributed depending on the content of the lesson.

●Grade Assessment
(Evaluation method)Evaluate the level of achievement for the target based on oral presentation and report.(Evaluation criteria)Passing grade: 60 points out of 100

●Notes
Announcements may be delivered via NUCT.

●Contacting Faculty
Questions are welcome within or after each class.

Internship B (1.0credits) (学外実習Ｂ)

Course Type	Comprehensive engineering courses
Division at course	Master's Course
Class Format	Practice
Course Name	Applied Physics
Starts 1	1 Spring and Autumn Semester
Lecturer	Associated Faculty

Overview of space exploration and research (2.0credits) (宇宙研究開発概論)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Process Engineering
	Chemical Systems Engineering	Electrical Engineering	Electronics
	Information and Communication Engineering	Mechanical Systems Engineering	Micro-Nano Mechanical Science and Engineering
	Aerospace Engineering	Department of Energy Engineering	Department of Applied Energy
	Civil and Environmental Engineering		
Starts 1	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester		
Lecturer	Leading Graduate		

●Course Purpose

This lecture course helps students to acquire a wide-ranging, panoramic knowledge of space research and development given by variety of lecturers from different academic fields.

●Prerequisite Subjects

Basic mathematics, Basic physics

●Course Topics

1. Space Exploration Projects
1.1 Overview of Space Exploration and Research
1.2 Space Projects
1.3 International Satellite and Spacecraft (HTV) Development
1.4 Project Management/Systems Engineering
1.5 Intelectual Properties in Business

2. Space Explorations on Observations
2.1 Space Propulsion Engineering
2.2 Materials Development for Space Applications
2.3 Space Observation Technologies
2.4 Introduction to Radiation Detectors and Electronics

3. Space-related Science
3.1 Foundations of Astrophysics
3.2 Earth and Planetary Science
3.3 Space Environment Science
3.4 Simulation Experiments

Report subject will be given at every lecture. The report should be submitted by the given deadline.

●Textbook

We do not specify the textbook. Lecture notes will be given as necessary.

●Additional Reading

Recommended readings will be give during lectures as necessary.

●Grade Assessment

Report must be submitted for each lecture. Proper understanding of each lecture's contents is evaluated. Passing average point is 60 out of 100.

●Notes

Students in "Leadership program for Space exploration and Research" are required to take this course before the qualifying examination.This course is open to any graduate students in Nagoya University.

●Contacting Faculty

Inquire contact method from the lecturer after the lecture

Advanced Lectures on Transdisciplinary Mobility Innovation I (2.0credits) (超学際移動イノベーション学特論 I)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	
Lecturer	Toshiyuki YAMAMOTO Professor	Faculty of TMI Program	

●Course Purpose

Through the lectures on various super-interdisciplinary mobility innovations for life-style transformation, learn the impacts and changes of life-style caused by the mobility innovations.
The ability to understand the mobility innovations from various perspectives, and to implement them based on the understandings from various disciplines are required to realize the life-style transformations by mobility innovations. The purposes of this class is to obtain the ability as below.
- understand the mobility innovations from various disciplines
- analyze the effects of and forecast the future of mobility innovations

●Prerequisite Subjects

Not required

●Course Topics

Through the lectures on super-interdisciplinary mobility innovations and life-style transformation, various environments and implementations of cutting-edge mobility innovations are discussed.

1. History of technologies on mobility
2. Service design of mobility
3. Product design theory
4. Mobility innovations and diversity
5. Theory on inclusive mobility

Report assignments on the contents explained in the lecture are given.

●Textbook

Materials are provided at classes.

●Additional Reading

Introduced according to the process of the lecture.

●Grade Assessment

Evaluated by reports.

●Notes

Not required.

●Contacting Faculty

Ask questions in the class. There are no fixed schedules for office hour. Make an appointment by e-mail or tel.

Yamamoto: 4636, yamamoto@civil.nagoya-u.ac.jp

Advanced Lectures on Transdisciplinary Mobility Innovation II (2.0credits) (超学際移動イノベーション学特論II)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	
Lecturer	Toshiyuki YAMAMOTO Professor	Faculty of TMI Program	

●Course Purpose

Through the practical lectures on various super-interdisciplinary mobility innovations for life-style transformation, learn more the impacts and changes of life-style caused by the mobility innovations.
The ability to understand the mobility innovations from various perspectives, and to implement them based on the understandings from various disciplines are required to realize the life-style transformations by mobility innovations. The purposes of this class is to obtain the ability as below.
- understand comprehensively the mobility innovations from various disciplines
- analyze deeper the effects of and forecast the future of mobility innovations

●Prerequisite Subjects

Advanced super-interdisciplinary mobility innovation I

●Course Topics

Through the lectures on more diverse super-interdisciplenary mobility innovations and life-style transformation, various environments and implementations of cutting-edge mobility innovations are discussed.

1. Cutting-edge mobility system
2. Ergonomics
3. Mobility and cognitive science
4. Mobility and society
5. Law and institutional design fro mobility

Report assignments on the contents explained in the lecture are given.

●Textbook

Materials are provided at classes.

●Additional Reading

Introduced according to the process of the lecture.

●Grade Assessment

Evaluated by reports.

●Notes

Not required.

●Contacting Faculty

Advanced Mobility Program Basic Course (4.0credits) (先進モビリティ学基礎)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture and Exercise		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	1 Spring Semester
	1 Spring Semester	1 Spring Semester	
Lecturer	Tatsuya SUZUKI Professor	Takeshi KATAKAI Designated Associate Professor	JIANG Meilan Designated Lecturer
	Eiji ABE Assistant Professor	Faculty of Advanced Mobility Program	

●Course Purpose

To train students who can be active in the mobility industry or research institute. This course is aiming to cultivate comprehensive knowledge not only on specialized technical elements but also service and social impact of the mobility. The class will be provided not only by professors but also by engineers in industry. The course is organized as follows:

1. Understand fundamentals of automobile
2. Understand the trend on electrification of automobile
3. Understand the trend on on intelligence for automobile
4. Understand dependability, safety and human factor
5. Comprehensively study the mobility service
6. Comprehensively study the legal system for mobility

●Prerequisite Subjects

Accepted basic engineering classes at Nagoya University Bachelor's degree, or equivalent knowledge.

●Course Topics

1. Fundamentals of automobile
2. Electrification of automobile
3. Intelligence for automobile
4. Dependability, safety and human factor
5. Mobility service
6. Legal system for mobility
7. Discussion and presentation

Read carefully the textbook before attending each class. After each class, solving the exercises in the textbook is highly recommended. Submission of the report after each class is mandatory.

●Textbook

Original lecture note will be provided.

●Additional Reading

It will be announced in the class if necessary.

●Grade Assessment

Evaluation is based on total score of reports at each class and final presentation. You need more than mark of 60 out of 100 points. Special certificate will be provided for passed students.

●Notes

No particular requirement.

bility Program Practical Training Course(Electric Autonomous Vehicle) (2.0credits) (先進モビリティ学実習（EV自

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Practice		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	1 Autumn Semester
	1 Autumn Semester	1 Autumn Semester	
Lecturer	Tatsuya SUZUKI Professor	Takeshi KATAKAI Designated Associate Professor	JIANG Meilan Designated Lecturer
	Eiji ABE Assistant Professor	Faculty of Advanced Mobility Program	

●Course Purpose

To train the students who can play an active role in the mobility industry or research institute. To provide break down study on the EV using commercial electric vehicles and a university formula car. After understanding the mechanism of the EV structure, to produce a mini car for automatic driving. Students themselves will build a software system that realizes a basic automatic driving such as lane tracking. This course is organized as follows:1. Learn the basics of technological development in the mobility industry2. Understand the structure and driving mechanism of electric vehicles3. Understanding autonomous driving technology through the production of a mini cars for autonomous driving4. Understand the software architecture for autonomous driving5. Understand cognition technology for lane detection / follow-up control and on-board installation6. Understand control technology for obstacle detection / avoidance and on-board installation

●Prerequisite Subjects

Accepted basic engineering classes at Nagoya University Bachelor's degree, or equivalent knowledge.

●Course Topics

After experiencing the break down study using commercial EV and an electric formula car, produce a mini car for autonomous driving and develop autonomous driving algorithm. After learning the basic movements of running, turning, and stopping, develop lane tracing algorithm to follow the white line by image recognition. A contest will be held at the end of the training. A special certificate will be issued to students who have completed the prescribed grades in this course. The content of the class is as follows.1. Electric vehicle structure and running mechanism2. Vehicle characteristic analysis and improvement methods3. Examination of software architecture for autonomous driving4. Understand and implement cognition technology for lane detection5. Understand and implement control technology for follow-up control6. Understand control technology for obstacle detection / avoidance

●Textbook

Original lecture note will be provided.

●Additional Reading

It will be announced in the class if necessary.

●Grade Assessment

Evaluation is based on the student's effort for solving the tasks, total score of reports, and final presentation. You need more than mark of 60 out of 100 points. Special certificate will be provided for passed students.

●Notes

No particular requirement.

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Lecture		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Associated Faculty		

●Course Purpose

• To design and conduct an original research project
• To develop experience with experimental/numerical/theoretical techniques
• To develop a working knowledge of relevant research literature
• To practice scientific writing and participate in the peer review process
• To be able to discuss the research and topic with other scientists and engineers
The objective of this project is to increase the capability to find and to solve research problems by learning the research approaches and ideas of different research fields.

●Prerequisite Subjects

Basic engineering subjects, English, Technical English

●Course Topics

• Students will develop (with guidance) a research project proposal at the beginning of the semester that will provide initiative, outline and experimental strategy.
• Each student will present oral reports of research progress, relevant readings, and/or challenges at scheduled lab meetings.
• Students will take primary responsibility for conducting research and do so with professional attitudes and time commitments. This is a lab course and you are expected to spend a minimum of 20 hours of productive lab work per week. It is more realistic to expect to spend an average of 25-30 hours per week working and thinking about your project.
• Students will produce a manuscript (with active feedback from the instructor and peers) that can be published in part or whole by a peer reviewed research journal. Publishable manuscripts require many drafts,

reviews, and revisions.
• Students are encouraged to present research results at appropriate scientific meetings.
• Students well be self-motivated and work independently, approaching the instructor for guidance regularly.

●Textbook
Will be designated by each supervisor.

●Additional Reading
Will be designated by each supervisor.

●Grade Assessment
The grade will be calculated according to the following criteria.
Written report following the same format as scientific paper... 50%; Presentation at the Workshop... 50%.
The acceptance standard is to understand the introduced research approaches and ideas.
Evaluation is done by the supervisor(s) at home and visiting universities.

●Notes
No conditions for taking the course.

●Contacting Faculty
Supervisor of visiting university basically takes care.

	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester		
Lecturer	Associated Faculty		

●Course Purpose

Gain basic knowledge of general engineering through English lectures on various hot research topics and leading technologies. The objective of this lecture is to develop research abilities and communication skills, which are essential to carry out international collaborative researches.

●Prerequisite Subjects

Basic engineering subjects, English, Technical English

●Course Topics

Depends on the lecturer.This course will be divided in 4 chapters as follows:1. Setting theme and reviewing literature2. Designing research plan3. Analysis and discussion of results4. Brief summary and future prospectsHomework will be given after the class and the report is required to be submitted in next class.

●Textbook

Will be designated by the lecturer.

●Additional Reading

Will be designated by the lecturer.

●Grade Assessment

Written report and evaluation by the professors.

●Notes

No conditions for taking the course.

●Contacting Faculty

International language exercise (1.0credits) (国際協働教育外国語演習)

Course Type	Comprehensive engineering courses		
Division at course	Master's Course		
Class Format	Exercise		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Process Engineering
	Chemical Systems Engineering	Electrical Engineering	Electronics
	Information and Communication Engineering	Mechanical Systems Engineering	Micro-Nano Mechanical Science and Engineering
	Aerospace Engineering	Department of Energy Engineering	Department of Applied Energy
	Civil and Environmental Engineering		
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester		
Lecturer	Associated Faculty		

●Course Purpose

The aim of this course is to provide Japanese students with the English classes or provide international students with Japanese classes to improve communication skills for both academic and daily life.

●Prerequisite Subjects

English, Technical English, Japanese

●Course Topics

Wide variety of exercises including speaking, listening, writing, reading, and presentation in Japanese/English.Homework will be given after the class and the report is required to be submitted in next class.

●Textbook

Will be designated by the lecturer.

●Additional Reading

Will be designated by the lecturer.

●Grade Assessment

Report, presentation, participation in discussionGrading will be based on understanding Japanese and English, and communication performance.

●Notes

No conditions for taking the course.

●Contacting Faculty

Acceptance and response in the class or through E-mail.

Seminar on Solid State Engineering 2A (2.0credits) (物性基礎工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Yukio TANAKA Professor	YukiKAWAGUCHI Professor	Keiji YADA Assistant Professor

●Course Purpose

Students master the fundamental basis and the ability of application of condensed matter physics like superconductivity, topological quantum phenomena, cold atom, mono-layer material fractional quantum Hall effect and spintronics.
For given theme on condensed matter theory, students make research on the problem and cultivate ablitiy to develop an original field of science.

Purposes:
1. To find research problems in the field of condensed mater theory.
2. To cultivate wide knowledge on condensed matter theory.

Example of the topics:
- Superconducting JunctionsTunnel effet, Josephson effect, Proximity effect
- Topological Superconductors
- Cold atom
- Skyrmion
- Topological Insulators
- Fractional quantum Hall effect
- Spintronics
- Symmetry of superconductivity
- Mechanism of Superconductivity
- Majorana Braiding Dynamics
- Atomic monolayers (Graphene, Silicene, Stanene)
- Dirac Semimetal, Weyl Semimetal

●Prerequisite Subjects

Seminar on Solid State Engineering 1A-1D

●Course Topics

Students select problems in the field of solid state theory and learn how to make reserach.

●Textbook

None

●Additional Reading

[1]Tunnelling effects on surface bound states in unconventional superconductors, S. Kasiwaya and Y. Tanaka, Rep. Prog. Phys. 63 1641(2000).
[2]The current-phase relation in Josephson junctions A. Golubov, A. A. Golubov, M. Yu. Kupriyanov, and E. Il'ichev, Rev. Mod. Phys. 76, 411 (2004)
[3]Spinor Bose-Einstein condensate, Y. Kawaguchi and M. Ueda, Physics Reports 520, 253-381 (2012)
D1,D2

●Grade Assessment

report and Oral presentation

●Notes

Seminar on Solid State Engineering 1A-1D

●Contacting Faculty

Seminar on Optical Science and Engineering 2A (2.0credits) (光物理工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Hideo KISHIDA Professor	Takeshi KOYAMA Associate Professor	Yuto NAKAMURA Assistant Professor

●Course Purpose

Seminar on electronic and optical properties of condensed matter and nanoscience.
Through the below learning, acquire the knowledge and applied and integration skills for advanced studies and the creative minds to lay out a research plan.

Goal of study:
1. Acquire the ability to plan a new research based on the understanding of the frontier research.
2. Acquire the ability to introduce and discuss the content of English papers.
3. Acquire the knowledge of wide range of condensed matter physics, material sciences and nanosciences.

●Prerequisite Subjects

Quantum Mechanics, Optics, Solid State Physics

●Course Topics

1. Optical Properties of Condensed Matter 2. Electronic Properties of Condensed Matter 3. Nanoscience 4. Nonlinear Optics 5. Laser Spectroscopy

Literature introduction and discussions about the above topics. Preparation of a presentation material before the class.

●Textbook

We choose papers from international journals.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Presentations, presentation materials and discussions. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

You can ask questions in the seminar. Otherwise, contact the instructors.

3. Acquire the knowledge of wide range of condensed matter physics, material sciences and nanosciences.

●Prerequisite Subjects

Quantum Mechanics, Optics, Solid State Physics

●Course Topics

1. Optical Properties of Condensed Matter 2. Electronic Properties of Condensed Matter 3. Nanoscience 4. Nonlinear Optics 5. Laser Spectroscopy

Literature introduction and discussions about the above topics. Preparation of a presentation material before the class.

●Textbook

We choose papers from international journals.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Presentations, presentation materials and discussions. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

You can ask questions in the seminar. Otherwise, contact the instructors.

Seminar on Optical Science and Engineering 2E (2.0credits) (光物理工学セミナー2E)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	3 Spring Semester		
Lecturer	Hideo KISHIDA Professor	Takeshi KOYAMA Associate Professor	Yuto NAKAMURA Assistant Professor

●Course Purpose

Seminar on electronic and optical properties of condensed matter and nanoscience.
Through the below learning, acquire the knowledge and applied and integration skills for advanced studies and the creative minds to lay out a research plan.

Goal of study:
1. Acquire the ability to plan a new research based on the understanding of the frontier research.
2. Acquire the ability to introduce and discuss the content of English papers.
3. Acquire the knowledge of wide range of condensed matter physics, material sciences and nanosciences.

●Prerequisite Subjects

Quantum Mechanics, Optics, Solid State Physics

●Course Topics

1. Optical Properties of Condensed Matter 2. Electronic Properties of Condensed Matter 3. Nanoscience 4. Nonlinear Optics 5. Laser Spectroscopy

Literature introduction and discussions about the above topics. Preparation of a presentation material before the class.

●Textbook

We choose papers from international journals.

●Additional Reading

We will introduce appropriate references as needed.

●Grade Assessment

Presentations, presentation materials and discussions. The criterion of pass is to reach the basic level of the goals.

●Notes

No requirement is imposed for taking this class.

●Contacting Faculty

Seminar on Quantum Physics in Condensed Matter 2A (2.0credits) (量子物性工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Taishi TAKENOBU Professor	Hiroshi ITO Associate Professor	Hisaaki TANAKA Assistant Professor
	PU Jiang Assistant Professor		

●Course Purpose

Through seminars on recent papers or monographs of pi-electron materials, such as organic molecules, nano-carbon materials, and atomically thin materials, students learn attitudes against academic research; the basics for research techniques and application to specific problems.
Through these activities, students acquire creativity and overall ability for solving specific problems.

●Prerequisite Subjects

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Course Topics

1. Organic laser devices
2. Ion-driven novel functional devices
3. Valleytronics based on atomically thin materials
4. Electron spin resonance study of structure and property of organic solids
5. Electrical conduction and superconductivity of organic solids.

Preparation for each subject should be made beforehand.

●Textbook

To be designated.

●Additional Reading

To be designated.

●Grade Assessment

Evaluation by oral examinations (60%) and question and answer (40%).

●Notes

Quantum physics, statistic thermodynamics, electromagnetism, solid state physics, chemical physics

●Contacting Faculty

Quentions are acceptable at the seminar.

Seminar on Quantum Physics in Condensed Matter 2B (2.0credits) (量子物性工学セミナー2B)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Autumn Semester		
Lecturer	Taishi TAKENOBU Professor	Hiroshi ITO Associate Professor	Hisaaki TANAKA Assistant Professor
	PU Jiang Assistant Professor		

●Course Purpose

Through seminars on recent papers or monographs of pi-electron materials, such as organic molecules, nano-carbon materials, and atomically thin materials, students learn attitudes against academic research; the basics for research techniques and application to specific problems.

Seminar on Structural Materials Science and Engineering 2A (2.0credits) (構造物性工学セミナー2A)

Course Type	Specialized Courses	
Division at course	Doctor's Course	
Class Format	Seminar	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	Hiroshi SAWA Professor	Naoyuki KATAYAMA Associate Professor

●Course Purpose

The seminar on structure engineering deals with advanced studies of microstructure of crystalline materials. It is composed of a series of 6 seminars, that is, seminar on structure engineering 2A to 2E. Through the whole seminars, it is aimed to develop the students' abilities to progress their PhD theses by solving small problems in microstructure engineering.

The aims of the class is below,
1. Understanding of the structural research, 2. Understanding of the classical technique of the structural research, 3. Understanding of the structural analysis technique such as X-ray diffraction, 4. Learning of the recent experimental/analytical technique, 5. Understanding of the structural research based from the structural physics point of view, 6. Investigating his/her own theme and make a thesis.

●Prerequisite Subjects

Solid State Physics, Diffraction Physics, Synchrotron Radiation Science, Statistical Mechanics, Quantum Physics, Materials Science

●Course Topics

The small theme in structure engineering will be given to each student. He(she) has to consider his(her) own theme in advance, and get the answers. Following to the presentation of the answers, the discussion with staff members is necessity.

Through the 5 classes consisting of 2A to 2E, we require students to understand below,
1. Importance of understanding of the crystal structures, 2. What decides the physical properties, 3. Physical properties sensitive to the crystal structure, 4. Physical properties insensitive to the crystal structure, 5. Relationship between structure and physical properties.

●Textbook

Original papers. The advices will be given concerning which papers would be appropriate to read.

●Additional Reading

Electronic Structure and the Properties of Soids ,by W.A.Harrison,Synchrotron Radiation Crystallography by P.Coppens, Introduction to Solid State Physics by C. Kittel,

●Grade Assessment

Oral examinations and reports.

●Notes

Students are expected to have some knowledge of structural analysis and symmetry.

●Contacting Faculty

Correspond at the time of the seminar.

Seminar on Magnetic Materials Engineering2A (2.0credits) (磁性材料工学セミナー2A)

Course Type	Specialized Courses	
Division at course	Doctor's Course	
Class Format	Seminar	
Course Name	Applied Physics	
Starts 1	1 Spring Semester	
Lecturer	TAKENAKAKoshi Professor	Yasunori YOKOYAMA Assistant Professor

●Course Purpose

This seminar aims to acquire knowledge on physical and chemical backgrounds of functional properties that various materials exhibit, understand the research trend, and learn various experimental methods by thoroughly reading the newest literature. The knowledge will be deepened by presentation and discussion during the seminar.
Goals:
1. Undersitanding the basic physics producing material functions.
2. Analyzing characteristic properties from various aspects
3. Applying these knowledges to research and development of actual functional materials.

●Prerequisite Subjects

Quantum Mechanics, Thermodynamics, Statistical Physics, Electromagnetism, Optical Properties of Solids, Solid State Physics

●Course Topics

1. Electronic Properties of Solids 2. Electronic Correlations 3. Magnetism 4. Transport Properties 5. Optical Properties 6. Thermal Properties 7. Mechanical Properties 8. Solid State Chemistry

The latest papers on condensed matter physics and materials science will be examined in detail from the above viewpoints, and oral presentations and questions will be made.

Before each seminar, the student should conduct a survey and prepare presentation materials.

●Textbook

A paper will be chosen from the newest literature each time.

●Additional Reading

C. Kittel, Introduction to Solid State Physics (John Wiley & Sons)
N. W. Ashcroft and N. D. Mermin, Solid State Physics (W. B. Saunders)
P. A. Cox, The Electronic Structure and Chemistry of Solids (Oxford University Press)
F. Wooten, Optical Properties of Solids (Academic Press)

●Grade Assessment

Passing grade: 60 points out of 100

●Notes

There is no requirement for taking this lecture.

●Contacting Faculty

Questions are welcome within or after each lecture.

Seminar on Computational Engineering Mathematics 2A (2.0credits) (計算数理工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Shao_Liang Zhang Professor	Tomohiro SOGABE Associate Professor	KEMMOCHI Tomoya Assistant Professor

●Course Purpose

Through reading recent papers in the field of numerical algorithms (numerical analysis), optimization and high performance computing, students are encouraged to advance his/her own research.

Goal

1. Understanding of advanced Numerical Algorithms (Numerical Analysis) and explaining them clearly.
2. Understanding of advanced Optimizations and explaining them clearly.
3. Understanding of advanced High Performance Computing and explaining them clearly.

●Prerequisite Subjects

Linear algebra I, II, Analysis, Applied mathematics
Seminar on Computational Engineering Mathematics 1A, 1B, 1C, 1D

●Course Topics

1. Fast and accurate algorithms for large-scale numerical linear algebra
2. Practical algorithms for combinatorial optimization problems
3. High performance computing

●Textbook

We will introduce appropriate references as required.

●Additional Reading

We will introduce appropriate references as required.

●Grade Assessment

Presentation and discussion.
The basic level of the goals are required for the qualification.

●Notes

Not required.

Seminar on Computational Engineering Mathematics 2C (2.0credits) (計算数理工学セミナー2C)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	2 Spring Semester		
Lecturer	Shao_Liang Zhang Professor	Tomohiro SOGABE Associate Professor	KEMMOCHI Tomoya Assistant Professor

●Course Purpose

Through reading recent papers in the field of numerical algorithms (numerical analysis), optimization and high performance computing, students are encouraged to advance his/her own research.

Goal

1. Deeper understanding of advanced Numerical Algorithms (Numerical Analysis) and explaining them clearly.
2. Deeper understanding of advanced Optimizations and explaining them clearly.
3. Deeper understanding of advanced High Performance Computing and explaining them clearly.

●Prerequisite Subjects

Linear algebra I, II, Analysis, Applied mathematics,
Seminar on Computational Engineering Mathematics 1A, 1B, 1C, 1D, 2A, 2B

●Course Topics

1. Fast and accurate algorithms for large-scale numerical linear algebra
2. Practical algorithms for combinatorial optimization problems
3. High performance computing

●Textbook

We will introduce appropriate references as required.

●Additional Reading

We will introduce appropriate references as required.

●Grade Assessment

Presentation and discussion.
The basic level of the goals are required for the qualification.

Seminar on Biomolecular Physics 2A (2.0credits) (生体分子物理工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Leonard Chavas Professor	Tomoki TERADA Associate Professor	Joji CHIKENJI Assistant Professor

●Course Purpose

In this class, students will understand the physical properties (structure, dynamics, function) of biomolecules at the level of atomic and intermolecular interactions, and at the same time, learn the methods to conduct and publish research on new phenomena by applying physical concepts and methods. By taking this course, students will be able to acquire basic skills for research such as:
1. The ability to perform experiments or calculations on new phenomena regarding the structure and function of proteins.
2. The ability to understand and explain new phenomena regarding protein dynamics and stability.
3. The creativity to develop new ideas and attempts through discussions.

●Prerequisite Subjects

Biological Science, Biophysics, Thermodynamics, Statistical Physics

●Course Topics

1. Protein structure
2. Protein dynamics
3. Protein function
4. Experimental methods required for protein research
5. Theoretical and computational methods required for protein research

Prepare before the presentation and discuss widely after the seminar to deepen your understanding.

●Textbook

Not specified.

●Additional Reading

Not specified.

●Grade Assessment

Achievement of the goals is evaluated equally by the presentations and discussions. Record more than 60/100 is qualified.

●Notes

There is no specific requirement. Seminars will be held face-to-face or remotely (online) as needed (we will inform you within the laboratory about the method).

●Contacting Faculty

Active discussion based on your own questions is the minimum requirement for the seminar.

Seminar on Biomolecular Physics 2B (2.0credits) (生体分子物理工学セミナー2B)

Course Type	Specialized Courses		
Division at course	Doctor's Course

Seminar on Crystal Physics 2A (2.0credits) (結晶物性工学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Koh SAITOH Professor	Makoto KUWAHARA Associate Professor	Takafumi ISHIDA Assistant Professor

●Course Purpose
Seminars on the fabrication, characterization and application of nanocrystalline materials using original papers as a text.

●Prerequisite Subjects
Seminar on Crystal Physics 1, Crytal Physics,Material Physics

●Course Topics
1. Classification of nano crystalline materials
2. Fabrication of nano crystalline materials
3. Characterization of nano crystalline materials
4. Application of nanocrystalline materials

●Textbook
None

●Additional Reading
None

●Grade Assessment
Oral test

●Notes
No registration requirement

●Contacting Faculty

Seminar on Crystal Physics 2B (2.0credits) (結晶物性工学セミナー2B)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Autumn Semester		
Lecturer	Koh SAITOH Professor	Makoto KUWAHARA Associate Professor	Takafumi ISHIDA Assistant Professor

●Course Purpose

Seminars on statistical physics of phase transitions and nonlinear and nonequilibrium pnenomena, and the analyses of atomic and electronic structures of micro-clusters with electron microscopy, electron diffraction and electron-energy loss spectroscopy.

●Prerequisite Subjects

Seminar on Crystal Physics 1, Crytal Physics, Material Physics

●Course Topics

1. Phase transitions and critical phenomena
2. Phase transitions of crystals and liquid crystals
3. Atomic structure of micro-clusters
4. Electronic structure of micro-clusters

●Textbook

None

●Additional Reading

None

●Grade Assessment

Oral test

Seminar on Nano-Structural Analysis 2A (2.0credits) (ナノ構造解析学セミナー2A)

Course Type	Specialized Courses		
Division at course	Doctor's Course		
Class Format	Seminar		
Course Name	Applied Physics		
Starts 1	1 Spring Semester		
Lecturer	Satoshi KASHIWAYA Professor	Koji ASAKA Lecturer	Rikizo YANO Assistant Professor

●Course Purpose

Through reading scientific literature on novel physical properties peculiar to the surface and interface through the observation of the electronic properties, students are trained to understand basic principles of electronic states and devices consists of novel superconductors, topological materials, atomic layer materials, etc.

●Prerequisite Subjects

Solid State Physics, Quantum Mechanics, Electromagnetism, Statistical mechanics

●Course Topics

1. Development and application of superconducting devices using surface / interface
2. Topological superconductivity and topological quantum computation
3. Electric field induced superconductivity and Josephson junctions
4. Novel physics on Majorana quasiparticles and axion dark matters
5. Surface physics of low-dimensional nanostructures on graphene and nanotube
6. Structures and physical properties of nano-materials

Prepare and review class content and understand the meaning of technical terms.

●Textbook

Text books for this seminar will be determined at the beginning of each semester. Scientific papers are chosen in accord with the progress of the seminar.

●Additional Reading

We will introduce references on demand.

●Grade Assessment

Object achievement is evaluated by quality of presentation and answers against questions in the seminar. Score of at least 60 points out of a possible 100 is required to pass.

●Notes

There are no specific course requirements.

●Contacting Faculty

We answer the questions during the lecture.

	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Associated Faculty		

●Course Purpose

The aim of this course is to expand the student’s ability as a researcher by studying in an abroad laboratory and learn different methods and ways of thinking, as well as communicate on a daily base with foreign researchers.

By completing the course, the students are expected to acquire various research methods and ways of thinking, gain the ability to tackle research problems from multiple angles, and acquire a broad international perspective.

●Prerequisite Subjects

Basic and specialized subjects related to the research subject, English, Advanced Lectures on Scientific English

●Course Topics

Students will stay in an abroad laboratory that will be chosen based on the participant’s research field and interest. The course consists of the following contents.

1. Theme setting and literature review
2. Formulating a research plan
3. Analyzing the results and discussion
4. Presentation of the results

After the class, students should review the analyzing processes of the research results and investigate related literatures.

●Textbook
Will be introduced at the host laboratory depending on the research subject

●Additional Reading
Will be introduced at the host laboratory if necessary

●Grade Assessment
Conducting research in an abroad laboratory for one semester and submitting a report is a prerequisite. Evaluation will be based on the student's report (50%) and oral presentation (50%). To pass, the students have to demonstrate that they have the capacity to adequately analyze the results and have acquired the basic knowledge to interpret the results.

●Notes

●Contacting Faculty
Questions will be answered by the supervisors at the host laboratory during the course.

	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Shinji DOKI Professor		

●Course Purpose

While attendance is raw, in "the innovation experience project," I stand with a company engineer (DP, Directing Professor) and carry an assistance, DP of the attendance straight instruction by the DP and the role of the interface of the attendance student. In this way, it is intended to let you do experience of the project management.

I aim for planning a researcher, improvement of the nature as the leader, the expansion of the field of vision by a simulated experience of instruction of the attendance life and the business management in the real world.

●Prerequisite Subjects

"Innovation Practice Course" 75 hours(Principle one day a week)

●Course Topics

In "the innovation experience project," I assist the project promotion by the DP.

Help of the understanding of a project theme and contents for the attendance life of various specialisms

I compile an opinion of the attendance life and let you make a purpose, the method of the project clear

Exchange of opinions between the attendance life, instruction, report of the discussion

Communication adjustment that DP and attendance are raw

I assume this a main component.

In addition, correspondence out of the lecture time is necessary when preparations, an investigation to affect project accomplishment are necessary.

●Textbook

Papers, books and/or documents that the lecturer (DP) will introduce.

●Additional Reading

Papers, books and/or documents that the lecturer (DP) will introduce.

●Grade Assessment

I evaluate it through accomplishment, the discussion of the project. If display of leadership, report ability and the leadership is accepted, it is said that I pass.

●Notes

No specific requirements.

●Contacting Faculty

The lecturer (DP) and the project staff of the university accept questions at any time.

Teaching and Instruction Exercise 2 (1.0credits) (実験指導体験実習2)

Course Type	Comprehensive engineering courses		
Division at course	Doctor's Course		
Class Format	Practice		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Materials Design Innovation Engineering
	Materials Process Engineering	Chemical Systems Engineering	Electrical Engineering
	Electronics	Information and Communication Engineering	Mechanical Systems Engineering
	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering	Department of Energy Engineering
	Department of Applied Energy	Civil and Environmental Engineering	
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	
Lecturer	Manato DEKI Associate Professor		

●Course Purpose

The purpose of this course is to provide guidance to semester students for advanced science and engineering experiments at the Venture Business Laboratory. Through this research guidance, students will be able to play a comprehensive role as a researcher / educator and instructor in the field in charge of device process system and device simulation, and will be able to provide research guidance. Useful for practical training as a research leader.

●Prerequisite Subjects

Knowledge of the field in charge selected from the fields of electronic device process system and device simulation.

●Course Topics

In the student experiment, the instructor students provide guidance to attendant students on subject research and original research from the field of electronic device process system and device simulation with the professional teacher. Together with the attendant students, they perform practical use these equipment and software and get the results. They experience the leadership of the research, providing research guidance, report preparation guidance, and presentation guidance.

●Textbook

Required documents is distributed.

●Additional Reading

Required documents is distributed.

●Grade Assessment

Evaluate by compiling experiments / exercises, teaching (70%), and interviewing (30%). Students who understand each device and software and give appropriate guidance are accepted, and their research results and new approaches are highly evaluated. A score of 60 or more out of 100 is a passing score.

●Notes

To have a deep understandinginonefieldfromelectronic device process and device simulation.

●Contacting Faculty

Arranging the schedules by e-mail and etc.

Research Internship2 U2 (2.0credits) (研究インターンシップ２ U2)

Lecturer	Shinji DOKI Professor		

●Course Purpose

Research internship is different from conventional internship for a working experience. Staffs in the faculty and instructors in a company cooperate with each other to set up research themes adequate to the doctoral course, and supervise a long-term internship for 1-6 months. This course aims at training of a person who has ability for an advanced research and development in not only a specialized field but also a multidisciplinary field, and a leader capable of making a proper judgment in a research project.

●Prerequisite Subjects

Students attending Research Internship are strongly recommended to take short-term Patent Laws and Focus on Venture Business I or II before the attendance.

●Course Topics

A student applies for a theme for research set up under the cooperation of a company and Nagoya University. Students should attend at the lecture at the university on the duty of confidentiality and the protection of intellectual property rights before starting the internship.

●Textbook

Papers, books and/or documents that the staff instructing the training in the company will introduce.

●Additional Reading

Papers, books and/or documents that the staff instructing the training in the company will introduce.

●Grade Assessment

The credits will be given to the students who have had the working days less than or equal to 20 days in the internship company.

●Notes

No specific requirements.

●Contacting Faculty

The questions will be answered by the direct supervisors as needed at the internship.

Laboratory Visit 1 U2 (2.0credits) (研究室ローテーション２ U2)

Course Type	Comprehensive engineering courses		
Division at course	Doctor's Course		
Class Format	Practice		
Course Name	Molecular and Macromolecular Chemistry	Materials Chemistry	Biomolecular Engineering
	Applied Physics	Materials Physics	Chemical Systems Engineering
	Electrical Engineering	Electronics	Information and Communication Engineering
	Mechanical Systems Engineering	Micro-Nano Mechanical Science and Engineering	Aerospace Engineering
Starts 1	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
	1 Spring and Autumn Semester	1 Spring and Autumn Semester	1 Spring and Autumn Semester
Lecturer	Associated Faculty		

●Course Purpose

The aim of this course is to expand the student’s ability as a researcher by conducting a research at a different laboratory and learn different methods and ways of thinking, as well as communicate with other researchers in related fields.By completing the course, the students are expected to acquire various research methods and ways of thinking, and gain the ability to tackle research problems from multiple angles.

●Prerequisite Subjects

Basic and specialized subjects related to the research subject

●Course Topics

Students will conduct research at a different laboratory. The host laboratory will be chosen based on the participant’s research field and interest from other laboratories within the campus, other universities, research institutes and companies. The course consists of the following contents.1. Theme setting and literature review2. Formulating the research plan3. Analyzing the results and discussion4. Presentation of the resultsAfter the class, students should review the analyzing process of the obtained results and investigate related literatures.

●Textbook

Will be introduced at the host laboratory depending on the research subject

●Additional Reading

Will be introduced at the host laboratory if necessary

●Grade Assessment

Up to 20 days research in the host laboratory and submitting a report is a prerequisite. Evaluation will be based on the student's report and the evaluation by the supervisor in the host laboratory. To pass, the students have to demonstrate that they have the capacity to adequately analyze the results and have acquired the basic knowledge to interpret the results. Grading will be decided from P (pass) or NP (not passed).

●Notes

Nothing particularly needed

●Contacting Faculty

Questions will be answered by the supervisors at the host laboratory during the course.
