The year 2020 marks the first Ashwin Krishna NUSIP Memorial Scholarship, which was founded by the father of Ashwin Krishna, Arvind Y. Krishna, MD.

Ashwin, student of University of Michigan, USA, was a NUSIP participant in 2018. Ashwin was extremely interested in cars / automotive technology since childhood. He was an active member of the Michigan Hybrid, Michigan Electric Car racing team since his first year at University of Michigan—diligently developing these cars for international competitions.

One of the most memorable events of Ashwin’s life was the wonderful time he spent at Nagoya University and other parts of Japan. His excitement was so evident in his detailed description of his life in Japan, the tons of photos he shared with us, the love for Japanese food and culture that he developed and the very thoughtful memorable gifts he brought for all our family members and close friends.

Ashwin had a very keen desire to revisit Japan for professional pursuits and exploring more of the culture and country. Ashwin’s desire to return to Japan remained a dream, yet it is the wish of his surviving family to support a fellow Michigan student by establishing the memorial scholarship. The scholarship is being sponsored by Ashwin Engineering Innovations, LLC, a company established to carry on Ashwin’s vision and mission.

This scholarship is available to a University of Michigan student, who is going to take part in NUSIP-Nagoya University Summer Intensive Program in Automotive Technology (single award of US$1,000). For more information, please visit the IPE study abroad website.
